And that it will fully protect its rights both as against manufacturers and users of all infringing devices

The following statement from Mr. N. A. Christensen sufficiently explains the situation:

September 15th, 1906

"To the Public:

"When the assets of the National Electric Co., successor to the Christensen Engineering Co., were recently sold by the trustee in bankruptcy to parties who later reorganized as the National Brake & Electric Co., the licenses for the Christensen air-brake patents were, according to the terms of my contract with the old company, in a state of forfeiture. This was duly acknowledged by the new company, at the time, in proper legal form. I have since granted a license covering the exclusive rights of manufacture and sale under my patents, in the United States, Canada and Great Britain, to the Allis-Chalmers Co., of Milwaukee, which is the sole rightful manufacturer and vendor of the Christensen devices. I am also giving my exclusive services to the Allis-Chalmers Co. in connection with the manufacture of Christensen apparatus, and purchasers may buy of that company with the assurance that they are securing articles manufactured under controlling patents and under the direct personal supervision of the originator and patentee.

N. A. Christensen

Having provided the most improved and modern shop facilities in our largely extended West Allis Works, installed special tools and engaged the services of a large number of men especially trained in this branch of manufacture, we are fully prepared to fill orders from stock for Christensen Air-Brake Apparatus and Repair Parts. Let us quote you prices.

ALLIS-CHALMERS COMPANY HAS OFFICES IN ALL THE LARGE CITIES

"BULL DOG" STEEL GAIN

A pressed steel support for cross arms consisting of two plates, one engaging the arm and the other the pole. It provides a means of mounting arms without cutting gains. It strengthens the arm and pole. It facilitates the placing and alignment of cross arms. It saves braces on four and six pin arms. It can be purchased at a cost slightly exceeding the cost of cutting a gain. It is made for telephone and standard arms and will fit any pole.

ALWAYS IN STOCK

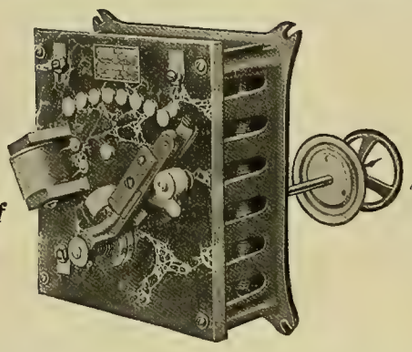
MANUFACTURED BY

G. I. Co.

CHICAGO EDISON COMPANY, 139 Adams Street, CHICAGO.

C & H Starting Rheostats
FOR REAR OF SWITCHBOARD

Made Entirely of Fire-Proof Material



Fitted with Automatic Release

C & H Bulletin 16 Starters for rear-of-switchboard mounting are similar to the Bulletin 10 type for front of board, except that the parts are reversed in arrangement, to allow of the handle being turned in the same direction to cut out resistance as in the front-of-board type.

The contact parts are thoroughly insulated from the operating shaft which projects through to the front of the switchboard.

The lever cannot be left in any of the intermediate positions, owing to a spring arrangement in the hub.

Made also for plain series wound motors by the addition of a resistance connected in series with the retaining magnet and directly across the line.

This resistance relieves the strain on the insulation of the retaining magnet, which will not burn out in service.

Electrical Instruments and Testing

BY

NORMAN H. SCHNEIDER

A book for every man who is interested in Electrical Instruments or Testing

BECAUSE

It is written for the practical man, and it gives the latest information.
It treats of modern instruments universally adopted.
It contains a complete chapter on testing with the Voltmeter, not explained in any other book.
The formulas given are fully explained and worked out in simple arithmetic.
The tests given are such as occur every day in the engine room, power house, telephone exchange, cable laying and constructors' work in the field.
It is written by a man who has had extensive practical experience in all branches of electrical testing.

210 Pages, over 100 illustrations and tables, handsome full limp leather, postpaid. Price, $2.00

A NEW EDITION, Care and Management of
ELECTRIC POWER PLANTS

This is another practical book by N. H. Schneider and among others contains chapters on **Storage Batteries, Standard Wiring, Switchboards and Instruments, Incandescent Lamp Testing.** If you have anything to do with Electric Power Plants you need this book.

294 pages, 203 illus., full limp leather, ... $2.50

THE BASTIAN METER

DIRECT CURRENT ALL VOLTAGES FROM 1 TO 750

Owing to the entire absence of moving parts, coils, magnets, etc., this meter has met with the immediate approval of Direct Current Central Stations.

It is well known that small meters are liable to burn-outs, particularly on 220 and 550 volt circuits. THE BASTIAN HAS NOTHING TO BURN OUT. Even lightning proof.

The accuracy is equal to any; the price so small that managers have a revelation in store. Postal brings it.

Manufactured by
HELIOS MFG. COMPANY

SALES DEPARTMENT
253 Broadway
NEW YORK CITY
J. B. OLSON, Manager of Sales

Even the tiny, apparently unimportant, parts are carefully constructed. The fibre used for lining both cap and shell, tests Neutral, being boiled one hour in water.

Therefore, it is not affected by heat and protects socket from damage by crossed high potential lines grounding on the shell.

PASS & SEYMOUR, Inc.,

Why does not the "Lamp" Organization "Kill" all Competition from outside?

Can you answer the above question?

Perhaps you can---perhaps you cannot.

Did it ever occur to you how much money the Lamp "Organization" has spent, and is now daily investing, in its strenuous efforts to retain absolute control of the majority of the men that know how to make and market incandescent lamps?

Ask any big lawyer with a reputation in electrical patent law what he thinks of the patents controlled by the incandescent LAMP "ORGANIZATION," and his answer will, we think, lead you to understand why it is that the "ORGANIZATION" spends apparently so much money attempting to control the brains of the lamp industry as well as its alleged patents.

We never heard of a real good patent on a brain, however. Consequently to control all the "ideas" that may spring up relative to the manufacture of incandescent lamps is no easy job; AND WE THINK WE HAVE GOT ONE OR TWO SCIENTIFIC AND COMMERCIAL IDEAS DOWN IN ST. MARYS THAT HAVE ESCAPED THROUGH THE "RED TAPE NET" OF THE "ORGANIZATION."

When your contract runs out have a talk with us and help us use these ideas for our mutual good.

General Electric Company

Self-Cooled Oil Transformers

Oil cooled transformer in Corrugated Case.

Conservative rating

Large overload capacity

Uniform and low temperature

Rigid and fire-proof tank construction

Moisture-proof impregnation of all coils

Coil Complete. Pancake Coil on Form.

Notable features of the General Electric Company's Large Self-Cooled Oil Transformers

The insulation is reinforced on the outer conductors of the coils where they are subjected to the potential strains produced by line surges.

Every surface of each coil is exposed to the action of the oil, assuring minimum and uniform temperature.

The well-known "pancake" coils are used exclusively in these large oil-immersed transformers. This type of coil was originated by the General Electric Company, and secures low voltage strains between layers and uniform heating. Every layer of conductor is protected by a layer of mica. No layer is more than three-quarters of an inch in width.

In a Wall of Chemical

OF course, there's a reason for the extraordinary long life of the

ROCK ISLAND
NEW PATENT
DRY BATTERY

One of our Dry Cells will outlast *any other battery* made. Why? Because it is as carefully made as an intricate piece of machinery, and is put together by hand. The heaviest zinc and the best carbon are factors in creating the

Highest Voltage and Greatest Current Capacity

In the Rock Island the cell isn't jammed in a *bare can*, but packed in a solid wall of chemical treatment that prevents both heat and cold from affecting the battery.

Department A will furnish more particulars. Write.

Anchors that hold

Showing the 5, 6 and 7 in. style.

Holds 12,500, 15,000 and 17,500 lbs. respectively.

Popular with Street Railway, Electric Light and Telephone Companies.

The 5, 6 and 7 inch
Stombaugh Guy Anchors
HAVE NO WELDS

The full rod is cast into the helix. Our experience has shown that welds are dangerous in rods of less than one inch in diameter.
The rods of Stombaugh Guy Anchors are not weakened by holes for pins or rivets.

STOMBAUGH GUY ANCHORS BORE INTO THE GROUND WITHOUT DISTURBING THE SOLID EARTH.

When in at the proper depth they are set. The strain can then be put on without fear of any back give. You are sure. An anchor is as strong as its weakest part. Stombaugh Guy Anchors have no weak parts.

HELP WANTED

Corresponding Engineer in good standing in his locality—wanted in all important towns in Northern Indiana and Illinois, Michigan, Wisconsin, Minnesota and Iowa, to assist in sales of the very best engine for electrical service, by manager of Chicago district sales office. You can increase your salary. Address in your own handwriting, with full name and address, Box 653, care Western Electrician, 507 Marquette Building, Chicago.

WANTED

A competent young working electrician, who wishes to secure a permanent position as manager of a waterpower electric light plant in this town of about 2,500 inhabitants, with about $75.00 per month salary. Plant consists of 1 200 K. W. Westinghouse A. C.; 1 75 K. W. Westinghouse A. C.; 2 25 K. W. D. C. Machines. Our mill operators look after the running of the plant night and day. The incumbent must be competent to take care of the plant, also the line, and do what little house wiring there is to be done and watch the line and the plant and keep everything in good repair. Only non-union man of good character, ability and moral habits, and not addicted to drink or cigarettes, need apply. LANDA ELECTRIC LIGHT AND POWER CO., New Braunfels, Texas.

WANTED

Draftsman with experience in electrical drafting room. Must be capable of laying out either direct current or alternating current machinery, also of checking detail drawings. State age, nationality, experience and salary wanted. (Signed) NATIONAL BRAKE & ELECTRIC COMPANY, Milwaukee, Wis.

WANTED.

A man that can do inside wiring, read and test meters, and help to do line work. State wages expected. Address BOX 654, care Western Electrician, 507 Marquette Building, Chicago.

WANTED

Energetic man as superintendent of supply and wiring department, in southern city. Must be competent to do estimating and to start men on work; also assist in purchasing. Salary $1,000 per year. Address Box 655, care Western Electrician, 507 Marquette Bldg., Chicago.

FOR SALE OR TRADE

An up-to-date Electric Light, Cold Storage and Ice Plant in town of 1,000 inhabitants; everything first class; modern 60 K.W. Westinghouse alternator; Gen. Elec. switchboard; new 110 H. P. Erieco automatic engine. 1,000 incandescent lamps in use; average flat rate 45 cents each; good city contract, $82.50 per month.

Henry Vogt 10-ton ice plant, of which 5 tons is refrigerating capacity and 5 tons used for manufacture of ice.

Building 48x104 feet, located on three acres of ground in town; two boilers of 100 H. P. each; coal $1.50 per ton in house. Sidetrack to plant. More demand for ice than can be produced.

Will sell outright or might sell working interest to right party. Write for price if interested. SIDELL ELECTRIC LIGHT, COLD STORAGE & ICE CO., Sidell, Ill.

OTTO ENGINES

Unsolicited Praise

OTTO

Farrand Bros., proprietors of the Lakeside Stock Farm, Colon, Michigan, write: "Our engine has run nine years without trouble, but all machinery is bound to wear out." They then ask for platinum with which to tip the electrodes,—a trifling and inexpensive repair. *Nine years* and just beginning to need attention. The average life of the *cheaper* makes is about *five* years. There is a moral in this for the prospective buyer,—Get the **"Otto"** for long life, and no trouble.

SAMSON TURBINE

If the SPEED of the turbine is to be controlled by a GOVERNOR, the turbine should be of such capacity that it will develop the MAXIMUM POWER required, when operating at ¾ to ⅞ gate, then when an overload is thrown on, the governor can open the gates wider and allow an increase in power. The EFFICIENCY of the SAMSON between ¾ and ⅞ gate is over 84%.

When You Use the Telephone

You want good service; you want it to be prompt; you want it to be accurate; you want it to be secret.

Every other telephone user's wants are the same as yours.

If you got that kind of service right along you would support with your patronage and your influence the company that rendered it. Every other telephone user would do the same.

Our Automatic Telephone System gives that kind of service. That is why Independent telephone companies operating our Automatic System are so successful, because the service rendered is of the kind that you and every other telephone user wants, expects and is entitled to, the best obtainable. That is why subscribers to automatic service are loyal to it and to the companies furnishing it. This loyalty is the "good will" of the business and a valuable asset.

And, as for the operating companies, they know that it costs them less to produce this ideal service with our automatic equipment than it would to produce inferior service, with manual equipment, and they can get more money for it.

There's the whole thing in a nutshell—ideal telephone service, prompt, accurate and secret, costing the operating company much less than it costs to produce inferior service, and commanding a higher price.

It's because of all these advantages that the stocks and bonds of Independent telephone companies operating our Automatic System are stronger, more stable, more desirable and more profitable than any other. That's why it will pay you to look into these "Automatic" advantages when figuring on new equipment.

Our Automatic telephone system has been adopted in the following cities:

Aberdeen, S. D.
Akron, Ohio.
Albuquerque, N. M.
Allentown, Pa.
Auburn, Me.

ALLIS-CHALMERS CO
MILWAUKEE WIS U S A

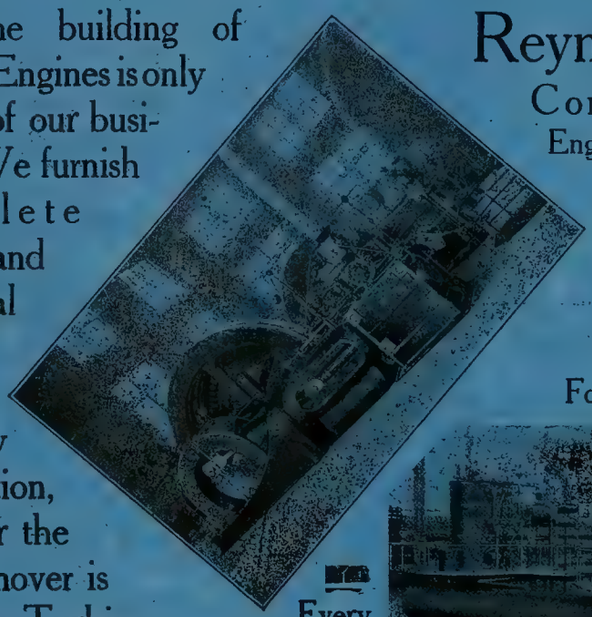
NOTWITHSTANDING THE LARGELY EXTENDED USE OF OTHER TYPES OF PRIME MOVERS

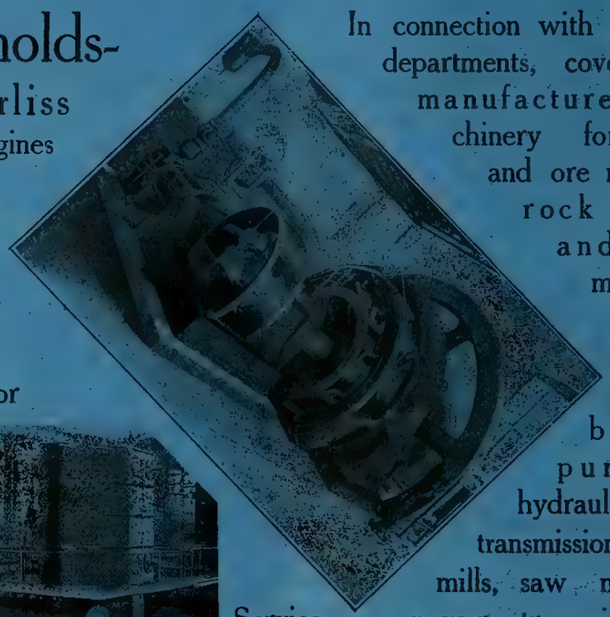
WE HAVE FELT NO FALLING OFF IN THE DEMAND FOR REYNOLDS-CORLISS ENGINES

On the contrary, there has been an actual increase in orders for these celebrated engines, which we have built and are continuing to build by the thousands for power plants the world over, and the capacity of our works is taxed to the utmost to supply them.

But the building of Corliss Engines is only a part of our business. We furnish complete power and electrical equipments of every description, whether the prime mover is a Steam Turbine, Reciprocating Steam Engine, Gas Engine or Hydraulic Turbine, and for each of these we are taking, from month to month, all of the orders that we can fill.

Reynolds-Corliss Engines





For Every Service

In connection with our other departments, covering the manufacture of machinery for mining and ore reduction, rock crushing and cement making, hoisting, air compressing, blowing, pumping, hydraulic power transmission, flour mills, saw mills and power transmitting, we are constantly called upon to furnish power, lighting and auxiliary electrical equipments, including generators, motors, transformers, converters, motor generator sets, frequency changers, controllers, starters, etc.

BECAUSE

Most purchasers now realize the advantage of having the complete equipment covered by one contract—thereby avoiding any division of responsibility and its attendant evils.

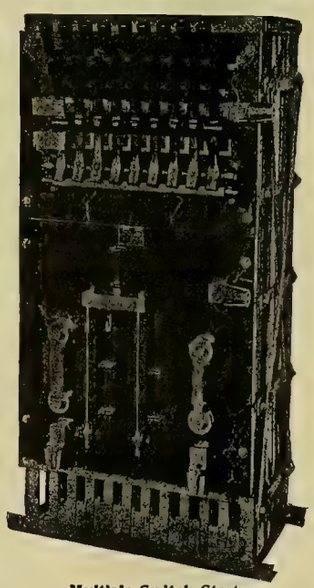
CHICAGO OFFICE: OLD COLONY BLDG

C & H MULTIPLE SWITCH STARTING RHEOSTATS



Multiple Switch Starter Universal Type

Sliding contact starters for large motors are objectionable because the contacts burn.

C & H multiple switch starters do not suffer from burning of the contacts and are therefore adapted for motor installations requiring heavy currents.

The multiple switch starter consists of a series of laminated switches mechanically interlocked to insure closure in the proper order.

Closure of a switch insures instantaneous contact over the entire contact surface.

Scraping action of the laminæ produces a smooth, bright contact surface.

An underload magnet holds the first switch closed, and when de-energized releases it, the remaining switches opening automatically in sequence.

Overload release features also supplied when desired.

The accompanying illustration shows the universal type, which contains all the accessories necessary to a complete motor installation.

Send for Bulletin No. 10½.

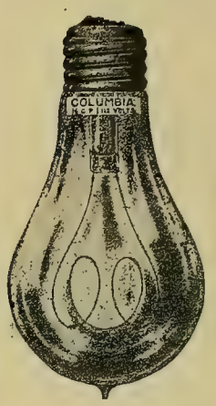
"ELECTRA" CARBONS ARE ALWAYS UNIFORM IN QUALITY, DIAMETER AND STRAIGHTNESS.
"ELECTRA" CARBONS ALWAYS GIVE SATISFACTION.

HUGO REISINGER 11 BROADWAY NEW YORK

LIGHT ECONOMY

Does NOT mean that you should buy lamps that are cheap in price. You want to take into consideration the amount of light the lamp gives and how much current is consumed. Compare the actual candlepower, life and current consumption of various lamps and you will find that the most economical lamp to use is the

COLUMBIA LAMP



Send us your annual requirements and let us submit our proposal form. TANTALUM LAMPS — 22 c. p., 44 watts, 110 volts, direct current, carried in Chicago stock. Send us a trial order.

LOOK FOR THE LICENSE LABEL IN THE STEM

THE NEW INCANDESCENT LAMP!

WE, too, make incandescent lamps of exceedingly good quality workmanship beyond criticism, prices below others, quality considered.

We give a life guarantee, a maintenance of candle power guarantee and ship just what our customers call for. No 104-volt lamps for 115-volt circuit, to give momentarily high candle power and short life, in our shipments.

Two factories with sufficient working capital and experienced employees produce one result, namely, good material and satisfied customers. Get busy with us and secure our prices on a barrel of lamps. Shipments same as samples, as we make our own sample lamps, something not always done. With our ELK new lamps and NOVELTY renewed lamps we are in position to supply all classes of trade. Be sure to mail your inquiry to the **NOVELTY INCANDESCENT LAMP COMPANY, Emporium, Pa.,** so that it will reach the proper hands.

Temperature Coefficient: NIL

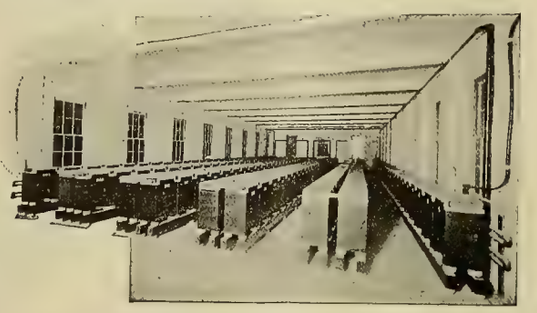
"ADVANCE" Resistance Wire

Absolutely no corrosion under any conditions

Especially recommended for measuring instruments and apparatus in which the wire is repeatedly heated and cooled.

Furnished also in Ribbon and Sheet

DRIVER-HARRIS WIRE CO.
Harrison, New Jersey



WHAT A STORAGE BATTERY WILL DO FOR YOU

Does the load on your plant fluctuate heavily, are you compelled to run an engine for a few lights, or do other conditions prevail which interfere with satisfactory and economical operation? Let us have your problem and we will carefully investigate your conditions and submit a detailed report and estimates of the advantages—mechanical, electrical and financial—of a Gould Storage Battery to you. Write for our bulletins and facts.

KEARNEY CABLE CLAMPS

Fig. 1 shows a bird's-eye view of a corner pole with two 600,000 C. M. cables turning a right angle with the aid of four Kearney Cable Clamps.

Fig. 2 shows the same conditions with the aid of spliced joints. Let us compare the two pieces of work.

The work on Fig. 1 can be done by two line men in 30 to 40 minutes without the services of a ground man. No cable is cut. No solder or blow-torches are used. All that is necessary is to clean off four inches of insulation for each clamp, and clamp them to the bare surface of the wire. There is no waste cable.

The work on Fig. 2 can be done by two line men, and a ground man to tend the blow-torches and keep the solder hot, in not less than two hours, maybe more. They must cut the cable in four places (maybe some saw blades will be broken doing this). From 10 to 12 feet of cable will be wasted at each splice (maybe more). Figure up this cost on 20 feet of 600,000 C. M. Cable. Then there is the solder and the extra tape and gasoline needed. (Think of the danger of gasoline, not only to the men but to property.) A splice creates line loss, and is never as good as the solid wire.

Kearney Cable Clamps are much cheaper, more durable, stronger, save time, labor and material. Increase value of scrap cable. 25 or more will be shipped on 30 days' trial, freight prepaid. Ship them back if unsatisfactory. Pay for them otherwise.

THE BEST DEALERS HANDLE THE EDISON BATTERY AND SPARK COIL

Dealers in business to stay carry the Edison Cell and the Edison Coil, because this cell and this coil satisfy the customer and he comes back to the store. When the cells are exhausted he returns to buy Edison Renewals—the cheapest form of battery energy. Because of the thorough mechanical construction of the Edison Spark Coil (it has no paper insulation to give way nor iron binding posts to rust), it never fails to ignite the charge. Its correct and scientific design make it most economical of battery energy. This point was long since proved by comparative tests on a large number of spark coils and gas and gasoline engines, but recently, in order to get a quantitive statement of the reason why the Edison Cell and Coil give the most engine revolutions for a dollar, we sent a lot of batteries and coils to Prof. B. F. Bailey, of the University of Michigan, where there are the electrical instruments, calorimeters, etc., to measure the energy output of the coil and the heat appearing in the spark. Prof. Bailey reports that

"83 per cent of the energy of the battery appeared as heat in the spark when using the Edison Spark Coil."

By reason of increased output we have been able to cut the price of the Edison Spark Coil from $3.25 to $2.50. As the Edison Cell is the cheapest form of battery energy, the Edison Spark Coil is the most economical.

The Edison Primary Battery is the best for all purposes. Its well thought-out construction makes it easy to set up and handle, while it is the only kind of cell that stands up to its work without loss of voltage to the end of its guaranteed life. It is sold in large numbers for Slot Machines, Railway, Mine, Fire and Burglar Alarm Signals, Phonographs, Sewing Machines, Fan Motors, X-ray and Cautery Outfits, Telephone and Telegraph Use, etc. Edison dealers are supplied with abundant printed matter, covering all uses, and the inquiries from our extensive advertising are turned over to him.

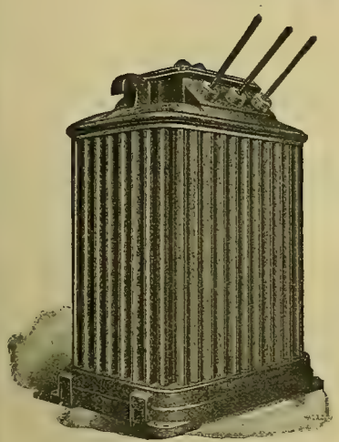
Self-Cooled Oil Transformers



Oil-cooled Transformer in Corrugated Case.

Conservative rating

Large overload capacity

Uniform and low temperature

Rigid and fire-proof tank construction

Moisture-proof impregnation of all coils

Notable features of the General Electric Company's Large Self-Cooled Oil Transformers

Coil Complete. Pancake Coil on Form.

The insulation is reinforced on the outer conductors of the coils where they are subjected to the potential strains produced by line surges.

Every surface of each coil is exposed to the action of the oil, assuring minimum and uniform temperature.

The well-known "pancake" coils are used exclusively in these large oil-immersed transformers. This type of coil was originated by the General Electric Company, and secures low voltage strains between layers and uniform heating. Every layer of conductor is protected by a layer of mica. No layer is more than three-quarters of an inch in width.

CONTRACTORS' ATTENTION

WE DO NOT BUILD SWITCHBOARDS. We build instruments for you to to put on your boards. We do not attempt to sell you instruments and then enter into competition and underbid you on the price of the boards. If we did this, we could possibly get a good many switchboard orders, as we could sell instruments cheaper to ourselves than we could to contractors.

We come to you, asking your support in the instrument line, guaranteeing not to compete with you on your switchboard business, guaranteeing to give you good instruments at a reasonable price.

We solicit your patronage with a full line of switchboard instruments, which we can ship from a large stock. Our Bulletin No. 67-H will tell you more about this.

POSITION WANTED

As chief engineer, electrician or superintendnet of a light and power company, by first-class Engineer, expert electrician, technical graduate Seven years' experience operating and erecting light and power plants. Familiar with all types of modern apparatus. Young married man, prefer Ohio. Address Box 638, care of Western electrician, 507 Marquette Bldg., Chicago.

POSITION WANTED

Position with a manufacturing concern of electrical goods in sales department. Have had several years' experience with well known electrical supply houses as department manager. Am desirous of making a change to go on the road. Best of references given. Address Box 657, care of Western Electrician, 507 Marquette Bldg., Chicago, Ill.

WANTED

One or two first-class erecting engineers capable of handling large electrical machinery. Good salary and opening for capable man. National Brake & Electric Co., Milwaukee, Wis.

WANTED

A thoroughly capable shop superintendent. One familiar with designing and manufacturing knife switches, tablet boards and switchboards, to take charge of a manufacturing plant in St. Louis. In answering, state age, experience, references and salary expected. Address Box 656, care Western Electrician, 507 Marquette Building, Chicago.

WANTED

A competent young working electrician, who wishes to secure a permanent position as manager of a waterpower electric light plant in this town of about 2,500 inhabitants, with about $75.00 per month salary. Plant consists of 1 200 K. W. Westinghouse A. C.; 1 75 K. W. Westinghouse A. C.; 2 25 K. W. D. C. Machines. Our mill operators look after the running of the plant night and day. The incumbent must be competent to take care of the plant, also the line, and do what little house wiring there is to be done and watch the line and the plant and keep everything in good repair. Only non-union man of good character, ability and moral habits, and not addicted to drink or cigarettes, need apply. LANDA ELECTRIC LIGHT AND POWER CO., New Braunfels, Texas.

FOR SALE OR TRADE

An up-to-date Electric Light, Cold Storage and Ice Plant in town of 1,000 inhabitants; everything first class; modern 60 K.W. Westinghouse alternator; Gen. Elec. switchboard; new 110 H. P. Erieco automatic engine. 1,000 incandescent lamps in use; average flat rate 45 cents each; good city contract, $82.50 per month.

Henry Vogt 10-ton ice plant, of which 5 tons is refrigerating capacity and 5 tons used for manufacture of ice.

Building 48x104 feet, located on three acres of ground in town; two boilers of 100 H. P. each; coal $1.50 per ton in house. Sidetrack to plant. More demand for ice than can be produced.

Will sell outright or might sell working interest to right party. Write for price if interested. SIDELL ELECTRIC LIGHT, COLD STORAGE & ICE CO., Sidell, Ill.

FOR SALE

We have for sale, ready for immediate delivery, the following electrical apparatus and engines: One Benton No. 13 generator, 110 volts, 40 amperes; with this generator a New York safety engine, 5x6; one Northern, 125 volts, 15 K. W., 1,125 R. P. M.; one four-circuit switchboard; one No. 12 Benton & Sons M. P., speed 1,000, 200 amperes, 125 V.; one 9x8 Bailey & Sons vertical high-speed automatic cut-off engine. This material is all in first-class operative condition ready for immediate shipment. CLINTON GAS LIGHT & COKE CO., Clinton, Iowa.

HARTFORD STEAM BOILER INSPECTION & INSURANCE COMPANY

39th ANNUAL STATEMENT

JANUARY 1, 1906

CAPITAL	$ 500,000.00
SURPLUS	1,261,459.69
RESERVES	1,926,686.81
ASSETS	3,688,146.50

The **Hartford** is the only company which makes a specialty of, and does exclusively, a steam boiler inspection and insurance business.

The **Hartford** is the only company whose entire talent and energies are applied to the study of steam, to the scientific construction and installation of boilers, and to their periodical inspection by expert mechanics.

The **Hartford** is the only company whose entire assets and resources are held exclusively for the protection of steam users, and the payment of losses occasioned by the explosion of steam boilers, and for no other hazard whatsoever.

The **Hartford** is now doing nearly nine-tenths of the Inspection and Insurance of Steam Boilers in the New England States, and nearly two-thirds of the entire amount done throughout the United States.

The Public Demand

for automatic telephone service has become so great that we have had to double the size and triple the capacity of our factory in order to supply enough equipment to keep pace with it.

Most of the big, new Independent Telephone Companies are starting in with automatic equipment and starting right.

Older Independent Companies are displacing their manual equipment by automatic as fast as the former is outworn or outgrown.

Why? Because the automatic system is a demonstrated success; because automatic service is ideal service, quick, sure and secret; because the operating company can produce it for less and sell it for more than manual service—a double increase in revenue.

Automatic equipment has a direct and positive influence on the securities of telephone companies using it. It makes the securities easier to market and more profitable to hold.

Our Automatic system has been adopted in the following cities:

Aberdeen, S. D.
Akron, Ohio.
Albuquerque, N. M.
Allentown, Pa.
Auburn, Me.
Auburn, N. Y.
Battle Creek, Mich.
Bellingham, Wash.
Berlin, Germany.
Buxton, Iowa.
Cadillac, Mich.

"BULL DOG" STEEL GAIN

A pressed steel support for cross arms consisting of two plates, one engaging the arm and the other the pole. It provides a means of mounting arms without cutting gains. It strengthens the arm and pole. It facilitates the placing and alignment of cross arms. It saves braces on four and six pin arms. It can be purchased at a cost slightly exceeding the cost of cutting a gain. It is made for telephone and standard arms and will fit any pole.

With all these numerous installations there has never been a breakdown in one of our Transformers; nor have we failed to meet our guarantee in any particular.

Oil-Filled Water-Cooled Transformer, 25 Cycle, 500 K. W., 20,000 to 375 Volts.

Oil-filled Self-Cooled Transformer, 60 Cycle, 170 K. W., 20,000 to 2,300 Volts.

Send for our Bulletin 1047, which illustrates the details of construction so clearly that the reasons for this marvelous record are readily apparent.

WE ARE PREPARED TO BID ON TRANSFORMERS TO FULFILL ANY SPECIFICATIONS

As a result of the installation of our Central Station Service in buildings which formerly operated their own plants, we find it necessary to market large quantities of

ELECTRIC SECOND-HAND MACHINERY STEAM

These machines are in excellent operating condition and are offered at *very low prices*.
They consist of Motors of various makes, Generators, Direct Connected D. C. Units, Engines, etc.
Prices and all necessary information will be promptly given on request.

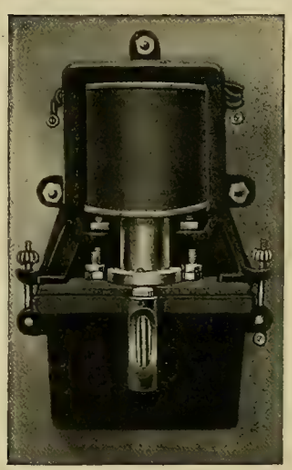
ALTERNATING AND DIRECT CURRENT MACHINERY
AMPERE, N. J.

C. & H. Self-Starters for A. C. Motors

For Single Two or Three Phase Motors



May be Controlled by Pressure Regulator or Float Switch

The self-starter shown herewith is designed for A. C. motors of small capacity, which may be thrown directly across the line.

The starter consists of an oil-immersed, double-pole, solenoid-operated switch which may be controlled by a pressure regulator or float switch, depending on the system used—whether open tank or compression tank.

Larger types are also made for use with squirrel-cage or slip-ring type motors.

These larger types contain, besides the solenoid-operated switch, a resistance commutator for the several phases, which is operated by air or hydraulic pressure. The valve of the operating device is regulated by an A. C. solenoid under control of the float switch or pressure regulator.

Bulletins 33 to 35 give descriptions and prices.

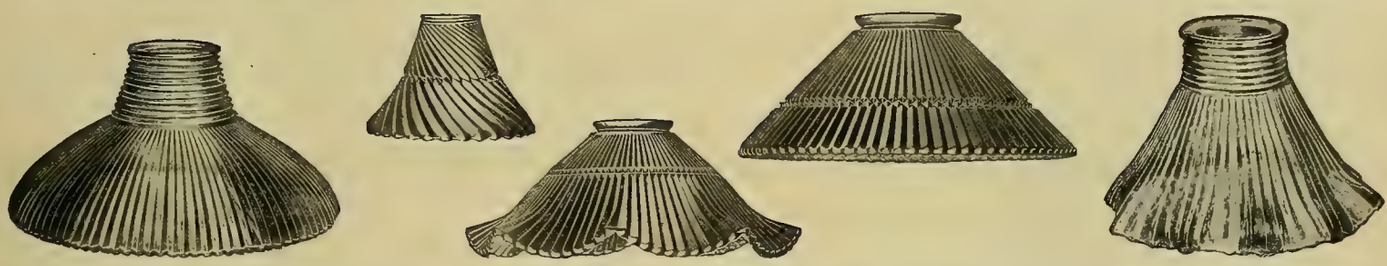
PERPETUAL INJUNCTIONS

Have been decreed by the U. S. Federal Courts against

IMITATION HOLOPHANES



Above are illustrations of some of the types of Imitation Holophanes against which the Federal Courts have issued perpetual injunctions. Anyone manufacturing, selling or using prism reflectors similar to or resembling the above is liable to a suit for damages.

GENERAL NOTICE TO THE TRADE

The Federal Courts have granted us perpetual injunctions against the following firms: McKenny & Waterbury (July 10, 1906); Stanley & Patterson (June 28, 1906); Florence Prism Company (June 25, 1906); Prismatic Hood Company (Feb. 21, 1906); United Cigar Stores Company (Dec. 7, 1905); Illuminating Engineering Company (May 25, 1905).

Your attention is called to the fact that ALL the court decisions have been in favor of the Holophane patents, and that damages as well as perpetual injunctions have been awarded us.

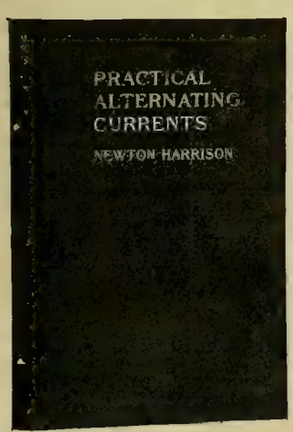
JUST OUT

"Practical Alternating Currents and Power Transmission"

BY NEWTON HARRISON, E. E.



A book which deals with the subject of alternating currents in a clear, practical and simple way. Arithmetic only made use of as the basis of all calculations and comparisons.

Partial Table of Contents

Methods of distributing electricity, outline of alternating and direct current systems; general use of polyphase currents; the two and three wire system contrasted; generation of single, two and three phase currents; the transformer; transformer testing; transformer connections; transformer construction in theory and practice; light, heat and power data.

384 pages, 172 illustrations, bound in cloth, price - - - - - - - - $2.50

Sent anywhere prepaid on receipt of price.

Remit by post office order.

Catalogue of electrical books sent free of charge upon request.

Only the SHELBY is not bowled over by comparison - - -

In spite of all the makeshifts that have been put on the market in the attempt to carry out the

Shelby Useful Light

idea—that of delivering the lamp's maximum light from its tipped end, the Shelby Useful Light Lamp still maintains its supremacy. Compare it with any of the freak-filament lamps under equal conditions, with or without reflectors, and you are bound to recognize the truth of this statement. The Shelby was the pioneer of the "Useful Light" coterie, and it is still far, far in the van. We'll send you samples for trial and comparison.

WE ALSO MAKE THE SHELBY TANTALUM LAMP AND METALIZED FILAMENT LAMPS OF STANDARD WATTAGES

A Splendid Opportunity —We've Seized it!

One of the "Napoleons," so called, in the lamp "organization" is reported to have remarked in effect, not very long ago:

"Oh, what a splendid opportunity now for the right man to start in as an independent lamp manufacturer!"

But he qualified this by saying that, unfortunately, the "right man," in his opinion, was now within the "organization."

He did not say that it was true, indeed, that one of the "right men" is perhaps now within the meshes of the net of the "ORGANIZATION" and is retained at a high salary BECAUSE THE "ORGANIZATION" FEARS THE BRAIN OF THIS MAN!

Of course it retained him---he is a magnificent investment. It would have paid the "ORGANIZATION" not only to have retained him but even to have allowed him to have remained in "masterly inactivity."

But he is not inactive. He is daily engaged in helping to "weave" the "red tape" of which the "net" is woven, that binds you to that "16 or 18 cents per."

The Napoleon within the "ORGANIZATION" forgot, however, that all the good ideas in the world cannot possibly come out of one head. He forgot that homely but trite expression---"there are others"(!) who can have an idea or two.

WE, TOO, SAW THAT OPPORTUNITY AND IT'S UP TO YOU TO HELP US MAKE THE MOST OF IT.

WE CAN GIVE YOU AS GOOD LAMPS AS THE "ORGANIZATION" AND WE CAN SAVE YOU MONEY. WHAT MORE DO YOU WANT?

Manufacturers of Air Compressors, Pneumatic Hammers, Drills, Appliances, Motor Hoists, Electric Drills, Etc.

DUNTLEY 500-VOLT ELECTRIC DRILL

SINGLE MOTOR TYPE IN OPERATION REBONDING TRACK

Built in single and two motor types, ranging in capacities from 5/8 inch to 2 inches diameter in steel.

We also manufacture a portable electric grinder, carrying an emery wheel 8 inches diameter by 1 inch face, to be operated from 550-volt direct current circuits.

These drills and grinders have been designed for Street Railway service. The electrical parts are built to operate at 500 to 650 volts, without external resistance. The insulation is of the very highest type throughout and the tools are made to withstand the conditions of severe service on Street Railway Construction and Maintenance. Illuminating Engineering

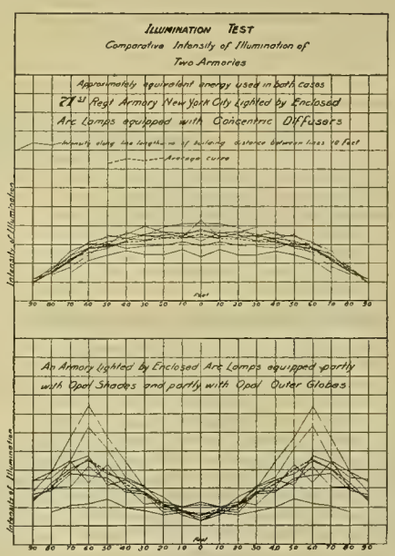
An Example and a Comparison

INTERIOR OF 71st REGIMENT ARMORY, N. Y. N. G., NEW YORK CITY



A striking example of the results obtained by the proper use of the right lighting outfit is well shown in this illustration.

The photograph from which this engraving was made was taken at night by the artificial illumination given by General Electric arc lamps equipped with concentric diffusers shown in the five lamp clusters.

This installation emphasizes the fact that by proper location of arc lamps and the use of concentric diffusers, the variation in intensity of light is comparatively small.

The uniform distribution and thorough diffusion of light in this armory is the result of General Electric Illuminating Engineering.

This graphical comparison of curves shows the results of actual tests made with the candle-foot photometer in two armories differently lighted but using the same energy per square foot of floor area.

The decision of the engineer who advocates the use of concentric diffusers with enclosed arc lamps is well fortified by the results of such impartial tests as these.

A study of these curves is well worth while for all lighting economists.

Anchors that hold

Showing the 5, 6 and 7 in. style.

Holds 12,500, 15,000 and 17,500 lbs. respectively.

Popular with Street Railway, Electric Light and Telephone Companies.

The 5, 6 and 7 inch

Stombaugh Guy Anchors

HAVE NO WELDS

The full rod is cast into the helix. Our experience has shown that welds are dangerous in rods of less than one inch in diameter.

The rods of Stombaugh Guy Anchors are not weakened by holes for pins or rivets.

STOMBAUGH GUY ANCHORS BORE INTO THE GROUND WITHOUT DISTURBING THE SOLID EARTH.

When in at the proper depth they are set. The strain can then be put on without fear of any back give. You are sure. An anchor is as strong as its weakest part. Stombaugh Guy Anchors have no weak parts.

POSITION WANTED

As electrician. Have had two years' experience in light and power plants. Will start at low wages if good chance for advancement. Single, sober and nineteen years of age; good reference. Address Box 659, care of Western Electrician, 507 Marquette Bldg., Chicago.

WANTED

One or two first-class erecting engineers capable of handling large electrical machinery. Good salary and opening for capable man. National Brake & Electric Co., Milwaukee, Wis.

FOR SALE

I have an electric light plant located in Illinois, population 8,000; amount of cash necessary $10,000. One located in Missouri, population 2,000; cash necessary $4,000. One located in Kentucky, population 3,000; amount of cash necessary $8,000. Write me for full particulars. Address Box 658, care Western Electrician, 507 Marquette Bldg., Chicago.

FOR SALE.

Will sell for $5,000.00 one-half interest in a water and light plant, to proper party who will assume management. Will earn $10,000.00 net under proper management. City of 4,000; no competition. Can furnish engineers' report and best authority on franchises and titles. F. H. EARL, Piano, Ill.

Proposals

FOR

Alternating Enclosed Arc Lamps, Transformers, Arc Regulators and Switchboards for the Lighting System of the West Chicago Park Commissioners.

CHICAGO, October 6, 1906.

Sealed proposals will be received by the West Chicago Park Commissioners, Union Park, Chicago, Illinois, until four o'clock p. m. Tuesday, October 16, 1906, for 1,040 alternating enclosed arc lamps with the necessary transformers, arc regulators, and switchboards for the lighting system in the West Park System, Chicago.

Detailed specifications may be obtained at the office of the West Chicago Park Commissioners, Union Park, Chicago. Each proposal must be accompanied by a certified check on some responsible bank doing business in Chicago, for five per cent. (5%) of the total proposal.

The West Chicago Park Commissioners reserve the right to reject any or all bids.

Attest: *B. A. ECKHART, President.*

Machinery For All Power Station Purposes.

17 Battery Place, New York

In the Design of Northern Power and Lighting Equipments

For industrial and isolated plant work we have ignored conditions of shop convenience. The prime factor is to provide machines convenient to arrange, easily and economically operated and endowed with long, useful life.

Economies of manufacture—which enable us to compete with machinery built for convenience and ease of manufacture—are obtained by our superior shop methods. **See Booklet No 2538.**

OTTO ENGINES

Unsolicited Praise

OTTO

Farrand Bros., proprietors of the Lakeside Stock Farm, Colon, Michigan, write: "Our engine has run nine years without trouble, but all machinery is bound to wear out." They then ask for platinum with which to tip the electrodes,—a trifling and inexpensive repair. *Nine years* and just beginning to need attention. The average life of the *cheaper* makes is about *five* years. There is a moral in this for the prospective buyer,—Get the "**Otto**" for long life, and no trouble.

SAMSON TURBINE

The illustration shows the large NIAGARA design, HORIZONTAL SHAFT TURBINES recently installed by us, for the NIAGARA FALLS HYDRAULIC POWER & MANUFACTURING CO., Niagara Falls, N. Y. Tests conducted by competent engineers, developed as follows:

Head	Gateage	Speed	H. P.	Generator Efficiency	Turbine Efficiency
213 ft.	½	257 r. p. m.	1750	95 per cent	73.00 per cent
213 ft.	¾	257 r. p. m.	3000	95 per cent	85.60 per cent
213 ft.	Full	257 r. p. m.	3500	95 per cent	81.50 per cent

These results have never been equaled by any turbine of the Horizontal Shaft Design, operating under equally HIGH HEADS. The test was made AFTER TURBINES WERE INSTALLED, direct coupled to generators. Francis' weirs and formulæ for discharge were used. The original test reports on file at our offices. These turbines are all fitted with our SAMSON BALANCED GATES. Note especially the UNIFORM SPEED at ALL GATEAGES.

307 Lagonda Street, Springfield, Ohio, U. S. A.

KNOWLEDGE IS POWER

Let Us Help You To Learn More

An Excellent Opportunity to Obtain PRACTICAL Information on

ELECTRIC LIGHT PLANTS

THE pithy old adage, "Knowledge is Power," is so true as to be self-evident. We must know things to do things. For practical men, practical information is wanted. To supply this need, constantly arising as new men enter the electrical field, the Western Electrician, beginning with the issue of July 7th, the first of the new volume, entered upon the publication of a valuable and notable series of articles (constituting, when finished, a complete treatise on the subject) on

The Small Central Station

Practical Hints on Its Construction and Operation

The scope of this eminently practical work, written by experienced authorities on the subject, is well indicated by the list of chapter headings:

I. General Observations.
II. Building and Foundations.
III. Fuel and Waterpower.
IV. Boilers and Setting.
V. Operation of Boilers.
VI. Engines.
VII. Steam Turbines.
VIII. Belting and Shafting.
IX. Electrical Equipment—Generators—Switchboard.
X. Arc and Incandescent Lamps.
XI. Instruments.
XII. Transformers.
XIII. Line Construction.
XIV. Distribution.
XV. Cost of Plants.
XVI. General Data.

The articles supply data relating to small and medium-sized stations using overhead construction, and are especially adapted for intending purchasers of electric-light plants and practical men. Within this field the ground is thoroughly covered in view of the requirements of the best modern practice. Operations and construction are dealt with at length, and the information given has been compiled from the experiences reported by central station managers operating in all parts of the United States, handling various types and sizes of machinery. The series will be enriched with **numerous illustrations, diagrams and tables.**

These articles will be of much value to all readers of the Western Electrician, new and old, interested in the practical operation of electric-light plants.

REMEMBER that this noteworthy series on **Electric Light Plants** began in the July 7th issue of the Western Electrician, and will run for from four to six months.

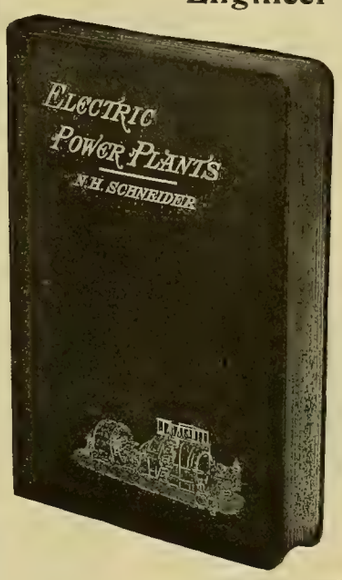
The Care and Management of

Electric Power Plants

By NORMAN H. SCHNEIDER

Here is a Book Every Steam and Electrical Engineer Should Have



Because it deals practically with the care and management of power plants; direct and alternating current motors have been given a special chapter and modern forms of starting rheostats are described at length.

There are special chapters on the electrical current, standard wiring with formulas and tables, etc., direct and alternating current dynamos, motors and motor starters, testing electric lamps and dynamos and measuring instruments, storage batteries, engineering notes, belts, pulleys, horsepower, etc.

290 PAGES, 203 ILLUSTRATIONS

Full Limp Leather, Round Corners, Gilt Edges . . $2.50

THE LATEST AUTHORITY ON

ELECTRICAL INSTRUMENTS AND TESTING

This is another practical book by N. H. Schneider. The tests given are such as occur every day in the engine room, power house, telephone exchange, cable laying and constructor's work in the field. 210 pages, over 100 illustrations and tables. Full limp leather. $2.00 postpaid.

ELECTRO-MAGNETS

WOUND BY AUTOMATIC MACHINE

ACME WIRE CO., NEW HAVEN, CONN.
LICENSEES OF THE VARLEY DUPLEX MAGNET CO
NEW YORK OFFICE: 26 COURTLANDT ST.

The Public Demand

for automatic telephone service has become so great that we have had to double the size and triple the capacity of our factory in order to supply enough equipment to keep pace with it.

Most of the big, new Independent Telephone Companies are starting in with automatic equipment and starting right.

Older Independent Companies are displacing their manual equipment by automatic as fast as the former is outworn or outgrown.

Why? Because the automatic system is a demonstrated success; because automatic service is ideal service, quick, sure and secret; because the operating company can produce it for less and sell it for more than manual service—a double increase in revenue.

Automatic equipment has a direct and positive influence on the securities of telephone companies using it. It makes the securities easier to market and more profitable to hold.

Our Automatic system has been adopted in the following cities:

Aberdeen, S. D.
Akron, Ohio.
Albuquerque, N. M.
Allentown, Pa.
Auburn, Me.
Auburn, N. Y.
Battle Creek, Mich.

Stanley-G.I.

The Stanley-G. I. Electric Manufacturing Company is a consolidation of the Stanley Electric Manufacturing Company of Pittsfield and the General Incandescent Arc Light Company of New York. The Stanley Company's product, marketed under the well-known trade name of the S. K. C. System, comprises generators, transformers, rotary converters, motor generator sets, switchboard apparatus, induction motors, etc. The General Incandescent Arc Light Company have been favorably known as builders of the high grade G. I. arc lamps, incandescent lamps, alternating current and direct current motors and special electrical supplies.

"Wood" Systems

Doesn't This Alternator Look Cool?

It runs as cool as it looks. It's one of the essentials of FORT WAYNE ALTERNATOR DESIGN.

PRACTICAL operation under actual conditions proves our statement.

Multiphase Revolving Field Engine Driven Alternator, Type TRE, 72 Poles, 400 K. W., 100 R. P. M., 2,300 Volts.

Special attention given to Ventilation of Frame and Insulation of High Voltage Armature Windings. You can depend on FORT WAYNE ALTERNATORS in emergencies.

THE BASTIAN METER
DIRECT CURRENT
ALL VOLTAGES
FROM 1 TO 750

Owing to the entire absence of moving parts, coils, magnets, etc., this meter has met with the immediate approval of Direct Current Central Stations.
It is well known that small meters are liable to burn-outs, particularly on 220 and 550 volt circuits. THE BASTIAN HAS NOTHING TO BURN OUT. Even lightning proof.
The accuracy is equal to any; the price so small that managers have a revelation in store. Postal brings it.

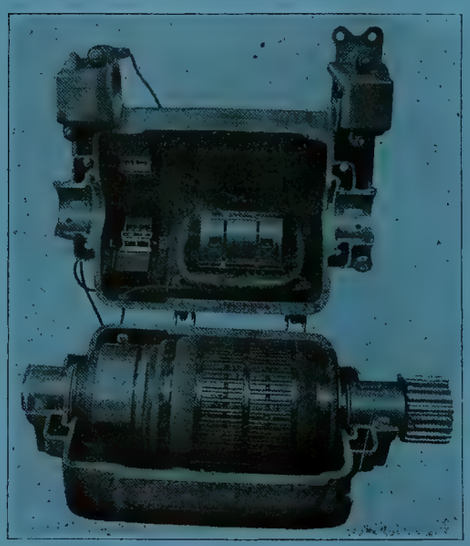
Allis-Chalmers Co. Furnishes Complete Street and Interurban Railway Equipments

Including Prime Movers—All Electrical Apparatus for Power Houses, Sub-Stations, Cars and Lines—and Air Brakes

In Bulletin 1053, recently issued, we describe our Standard Railway Motors and Controllers, intended for urban and interurban traffic on 500-650 volt direct current circuits. Send for a copy of it.

ALLIS-
CHALMERS
RAILWAY
MOTOR



Sizes :
35 H. P.
50 H. P.
75 H. P.

The motors built by us are thoroughly substantial and reliable in every respect. They have been subjected to exhaustive tests in every-day service, their performance carefully noted, and care taken to eliminate, as far as possible, all the usual sources of trouble. The bearings are of liberal size, and parts subject to heavy stress have been made very strong. High-grade, durable insulation has been used throughout, and careful provision made for efficient ventilation, with the most satisfactory results.

In the development of these motors the matter of commutation has received particular attention; they run practically sparkless in service and the flashing over point is unusually high.

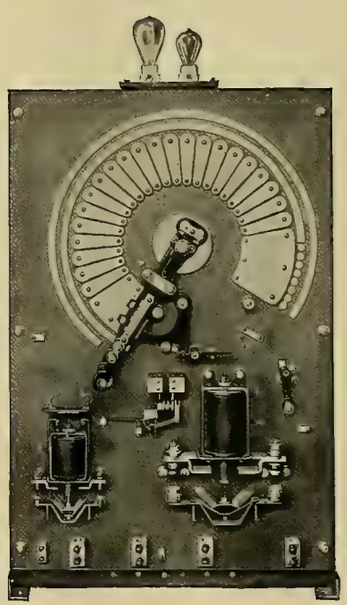
ALTERNATING AND DIRECT CURRENT MACHINERY

AMPERE, N. J.

C & H CONTROL

For Motor Driven Rotary

Printing Presses



In setting the plates on the rolls of a rotary printing press it is necessary to turn the rolls slowly and positively through a very small number of degrees with provision for a positive stop.

For threading in the paper a slow, steady speed of the roller is called for.

For convenience it is well also to have more than one printing speed.

A C & H control system for the printing press motor will satisfactorily fulfil all the above conditions.

The motor may be operated by this controller at approximately 15 per cent of full speed. This makes unnecessary the extra expense of a Teazer system or an independent motor for running at low speeds.

Bulletin 65 controllers are so arranged that all the speeds desired, and positive control of the motor, may be obtained by using but one motor and any one of three standard voltages.

What a Storage Battery Will Do for You

Does the load on your plant fluctuate heavily, are you compelled to run an engine for a few lights, or do other conditions prevail which interfere with satisfactory and economical operation? Let us have your problem and we will carefully investigate your conditions and submit a detailed report and estimates of the advantages—mechanical, electrical and financial—of a Gould Storage Battery to you. Write for our bulletins and facts.

KEARNEY CABLE CLAMPS

Fig. 1 shows a bird's-eye view of a corner pole with two 600,000 C. M. cables turning a right angle with the aid of four Kearney Cable Clamps.

Fig. 2 shows the same conditions with the aid of spliced joints. Let us compare the two pieces of work.

The work on Fig. 1 can be done by two line men in 30 to 40 minutes without the services of a ground man. No cable is cut. No solder or blow-torches are used. All that is necessary is to clean off four inches of insulation for each clamp, and clamp them to the bare surface of the wire. There is no waste cable.

The work on Fig. 2 can be done by two line men, and a ground man to tend the blow-torches and keep the solder hot, in not less than two hours, maybe more. They must cut the cable in four places (maybe some saw blades will be broken doing this). From 10 to 12 feet of cable will be wasted at each splice (maybe more). Figure up this cost on 20 feet of 600,000 C. M. Cable. Then there is the solder and the extra tape and gasoline needed. (Think of the danger of gasoline, not only to the men but to property.) A splice creates line loss, and is never as good as the solid wire.

Kearney Cable Clamps are much cheaper, more durable, stronger, save time, labor and material. Increase value of scrap cable. 25 or more will be shipped on 30 days' trial, freight prepaid. Ship them back if unsatisfactory. Pay for them otherwise.

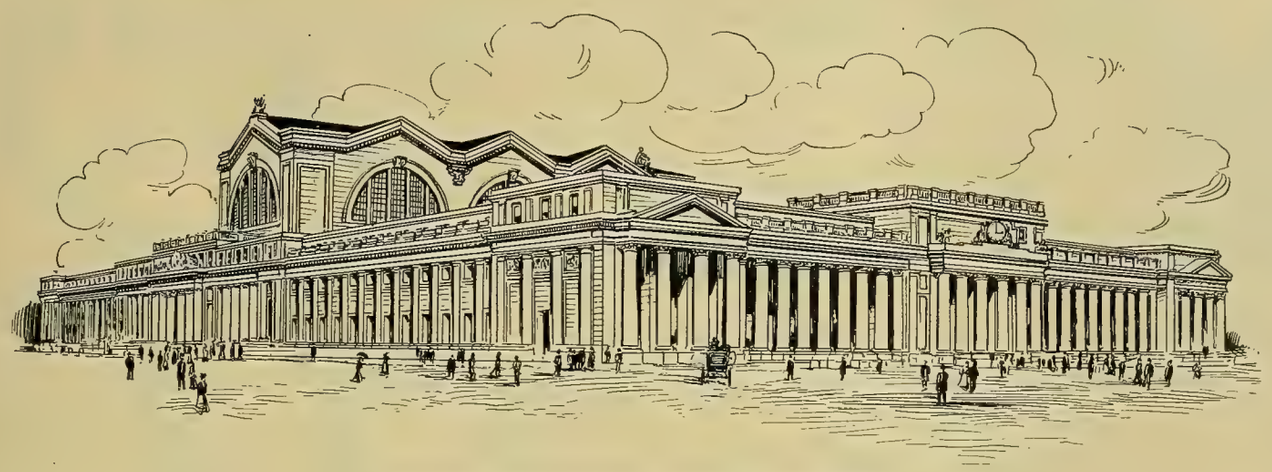
The Largest Public Building in the World adopts NERNST LAMPS



THE NEW PENNSYLVANIA TERMINAL, NEW YORK.

This magnificent building of classic design will be one of the notable architectural achievements of the age. Its entire equipment has been selected with a single view, that of getting the best.

When it came to selecting a lighting system, a thorough investigation resulted in the adoption of the

NERNST

which was found superior to all others, not only in economy of installation and maintenance but in general characteristics, including color quality, distribution, reliability, flexibility and adaptability to artistic design.

This building, consisting as it will of rooms for various uses and of various sizes, ranging from a small shop to the largest general waiting room in the world, involves problems covering practically the whole range of illumination, and the adoption of the Nernst System for the illumination of the whole structure is an unqualified appreciation of its superiority.

If you have a lighting problem to solve, it will pay you to investigate THE NERNST SYSTEM.

Important

This is what we have been fighting, from Maine to California.

The best evidence of our success in the fight lies in the large number of DUPLICATE lamp orders that have come in from some of the largest buyers of incandescent lamps in the United States. Every week you have seen one of our series "of anti-organization" ads in this paper. Keep your eye on them.

It will pay you to continue to read them, because we intend to continue to bring out very vital points and points decidedly to your interest.

St. Mary's Incandescent Lamp Company, ST. MARY'S, PA.

THE NEW Incandescent LAMP

WE, too, make incandescent lamps of exceedingly good quality, workmanship beyond criticism, prices below others, quality considered.

We give a life guarantee, a maintenance of candle power guarantee, and ship just what our customers call for. No 104-volt lamps for 115-volt circuit, to give momentarily high candle power and short life, in our shipments.

Two factories with sufficient working capital and experienced employees produce one result, namely, good material and satisfied customers. Get busy with us and secure our prices on a barrel of lamps. Shipments same as samples, as we make our own sample lamps, something not always done. With our **Elk** new lamps and **Novelty** renewed lamps, we are in position to supply all classes of trade. Be sure to mail your inquiry to the

NOVELTY INCANDESCENT LAMP CO.

Emporium, Penna.

so that it will reach the proper hands. **ALVIN & JACKSON,** WESTERN SALES AGENTS, 502 Monadnock Block, Chicago, Ill.

Mr. Dealer:—Why do people insist upon getting the Edison Cell? Because the Edison cell gives no trouble, it keeps the engine going or does whatever else it has to do by standing up with full voltage and current to the end of its guaranteed life. It is the cheapest form of battery energy. The scientific reasons why are fully stated in the Battery Catalog. Write for it.

Northern Buffing and Grinding Equipments

Especially designed for the service. Shafts are exceptionally sturdy and do not spring on heavy work. Bearings are dust proof—shafts do not cut, bearings do not heat. Speeds are especially calculated for the requirements of such service and the larger sizes are built variable speed to enable the operation of the grinder or buffer to suit the diameter of the wheels.

Bulletin No. 2548 on all sizes and types of Northern Grinders and Buffers.

KNOWLEDGE IS POWER

Let Us Help You To Learn More

An Excellent Opportunity to Obtain PRACTICAL Information on

ELECTRIC LIGHT PLANTS

THE pithy old adage, "Knowledge is Power," is so true as to be self-evident. We must know things to do things. For practical men, practical information is wanted. To supply this need, constantly arising as new men enter the electrical field, the Western Electrician, beginning with the issue of July 7th, the first of the new volume, entered upon the publication of a valuable and notable series of articles (constituting, when finished, a complete treatise on the subject) on

The Small Central Station

Practical Hints on Its Construction and Operation

The scope of this eminently practical work, written by experienced authorities on the subject, is well indicated by the list of chapter headings:

I. General Observations.
II. Building and Foundations.
III. Fuel and Waterpower.
IV. Boilers and Setting.
V. Operation of Boilers.
VI. Engines.
VII. Steam Turbines.
VIII. Belting and Shafting.
IX. Electrical Equipment—Generators—Switchboard.
X. Arc and Incandescent Lamps.
XI. Instruments.
XII. Transformers.
XIII. Line Construction.
XIV. Distribution.
XV. Cost of Plants.
XVI. General Data.

The articles supply data relating to small and medium-sized stations using overhead construction, and are especially adapted for intending purchasers of electric-light plants and practical men. Within this field the ground is thoroughly covered in view of the requirements of the best modern practice. Operations and construction are dealt with at length, and the information given has been compiled from the experiences reported by central station managers operating in all parts of the United States, handling various types and sizes of machinery. The series will be enriched with **numerous illustrations, diagrams and tables.**

These articles will be of much value to all readers of the Western Electrician, new and old, interested in the practical operation of electric-light plants.

REMEMBER that this noteworthy series on **Electric Light Plants** began in the July 7th issue of the Western Electrician, and will run for from four to six months.

The Public Demand

for automatic telephone service has become so great that we have had to double the size and triple the capacity of our factory in order to supply enough equipment to keep pace with it.

Most of the big, new Independent Telephone Companies are starting in with automatic equipment and starting right.

Older Independent Companies are displacing their manual equipment by automatic as fast as the former is outworn or outgrown.

Why? Because the automatic system is a demonstrated success; because automatic service is ideal service, quick, sure and secret; because the operating company can produce it for less and sell it for more than manual service—a double increase in revenue.

Automatic equipment has a direct and positive influence on the securities of telephone companies using it. It makes the securities easier to market and more profitable to hold.

Our Automatic system has been adopted in the following cities:

Aberdeen, S. D.
Akron, Ohio.
Albuquerque, N. M.
Allentown, Pa.
Auburn, Me.
Auburn, N. Y.
Battle Creek, Mich.
Bellingham, Wash.

Westinghouse

Bearing Metal

Is the result of the most exhaustive research as to the qualities required in a bearing metal, to be used on our generators and motors, which would in the greatest degree tend towards their successful operation.

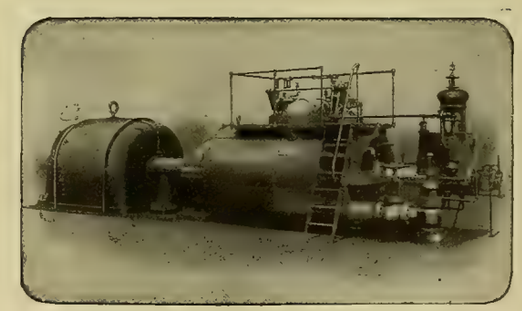
Westinghouse Electric & Mfg. Co.

Atlanta	Buffalo	Cleveland	Detroit	New Orleans	Pittsburg	San Francisco
Boston	Chicago	Dallas	Los Angeles	New York	St. Louis	Seattle
Baltimore	Cincinnati	Denver	Minneapolis	Philadelphia	Salt Lake City	Syracuse

For Canada: Canadian Westinghouse Co., Ltd., Hamilton, Ontario. Mexico, G. & O. Braniff & Co., City of Mexico

When We Assert

That Westinghouse Steam Turbines are more economical of steam, especially at low loads; are simpler to operate and require less attention, both skilled and unskilled, than reciprocating engines of equal capacity, we only state what has been the common, every-day experience wherever they are installed.



The Westinghouse Machine Co.

Westinghouse

A. C. Series Arc Lighting System

Has Many Superior Features

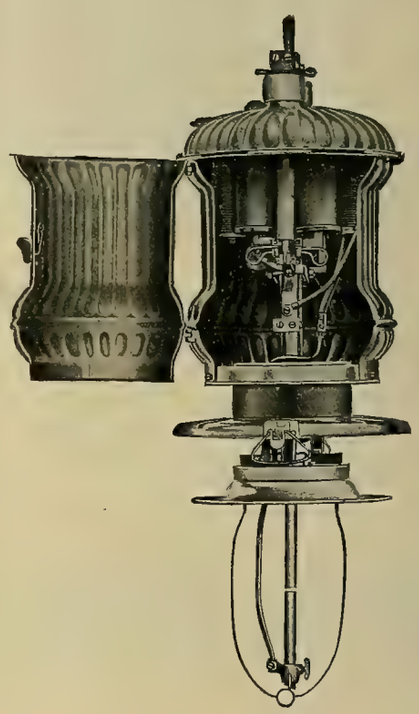
The lamp is so designed that insulation is required at only two points to insulate the controlling and operating mechanism from the housing.

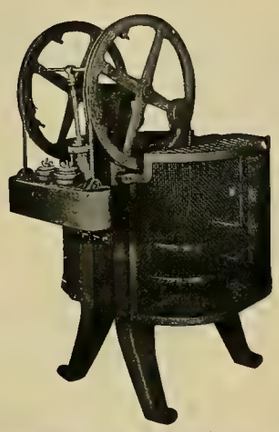
No flexible leads are used.

No iron parts are exposed to the weather.

The case is of heavy cold pressed copper.

Each lamp, before shipment, is given a break-down test of 7,000 volts, A. C.





Regulating Transformer

The windings of the constant current regulating transformer, an important part of the equipment, are insulated for a voltage considerably in excess of that which is required in actual service. The coils have connections brought out, so that they can be connected to give the full load power factor on voltages 10 per cent above or below normal rating, and on loads 70, 85 and 100 per cent of the full load number of lamps.

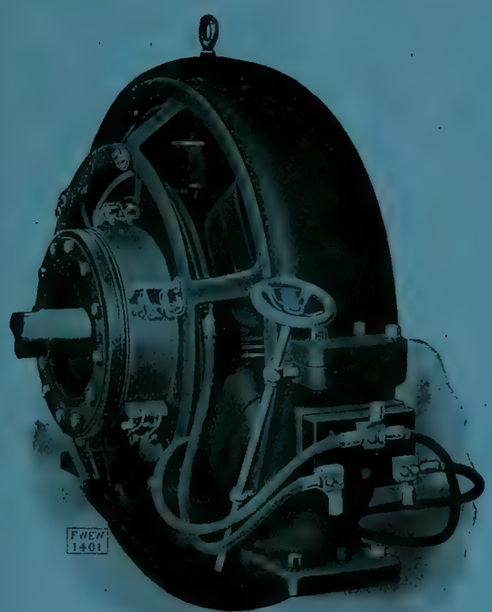
Fort Wayne Electric Works

"Wood" Systems

Railway Generators

Direct Connected, Engine Driven, as built by us, are correct in design and methods of construction. Their continuous satisfactory operation during the years of their manufacture have fully demonstrated that fact. Experience and practical conditions of service are the safeguard in our designs.



Type MPL, 275 KW., 75 RPM., 575 Volts Direct Connected Railway Generator.

Armature of Type MPL Direct Connected Railway Generator.

COMMUTATION

The trouble resulting from poor commutation in railway generators on account of sudden fluctuations in load has been one of the hardest problems to solve successfully. The special construction of the pole piece in

FORT WAYNE GENERATORS

prevents sparking at the brushes under varying loads.

IN SUPPLYING MACHINERY OF ALL KINDS FOR THE ENORMOUS POWER AND ELECTRICAL DEVELOPMENT OF THE COUNTRY, ALLIS-CHALMERS COMPANY HAS NATURALLY TAKEN A LEADING PART

Because for years past it has been closely identified with the GROWTH OF ALL SECTIONS in the field of MINING and ROCK CRUSHING, and in the SAW MILL and FLOUR MILL INDUSTRIES IT WAS A PIONEER. Having developed nearly all of the machines that are still regarded as STANDARD TYPES and the fact that it is now in a position to furnish complete equipments for use in a great variety of the principal industries, including Power and Electrical Apparatus of every description, enables it to retain and largely extend this most desirable class of trade.

Purchasers need no longer submit to the loss and annoyance incident to divided responsibility. Choose the type of Prime Mover best adapted to your requirements:

COMPANY
ALTERNATING AND DIRECT CURRENT MACHINERY
AMPERE, N. J.
CHICAGO OFFICE, OLD COLONY BLDG.

Reversible Drum Controllers
FOR FOUNDRY WORK

Lifting castings and other heavy material in a foundry requires the full capacity of the foundry crane—the ordinary crane motor controller provides for this condition.

You must have in addition, however, perfect control of the motor when moving flasks, lifting patterns from the sand or raising copes. The ordinary controller does not provide for this.

C. & H. bulletin 66-A controllers are ideal for foundry work, for they provide a slow speed, light load control on the first point, which gives approximately constant speed to the motor and eliminates the jerk which breaks the sand.

Full load conditions are also fully provided for.

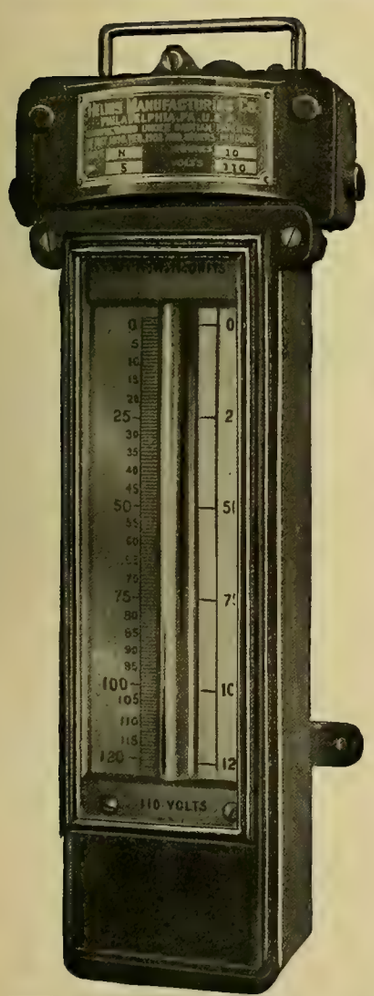
COLUMBIA CARBON PRODUCTS



THE BASTIAN METER

DIRECT CURRENT ALL VOLTAGES FROM 1 TO 750

Owing to the entire absence of moving parts, coils, magnets, etc., this meter has met with the immediate approval of Direct Current Central Stations.

It is well known that small meters are liable to burn-outs, particularly on 220 and 550 volt circuits. THE BASTIAN HAS NOTHING TO BURN OUT. Even lightning proof.

The accuracy is equal to any; the price so small that managers have a revelation in store. Postal brings it.

WAGNER ELECTRIC MFG. COMPANY

Main Office and Factory St. Louis, U. S. A.

TRANSFORMERS

Wagner transformers are built right, not because we say so, but because we make them so. It is the inside history that tells the story, and their "insides" are right.

We do not sacrifice good insulation in order to get good regulation, but our form of coil winding permits good insulation with good regulation.

Our transformers are put out with a guarantee, which is in effect an insurance policy in your favor, guaranteeing their good behavior.

Our bulletin No. 72-H will give more detailed information regarding the construction of these transformers, and we would appreciate the opportunity of sending it to you.

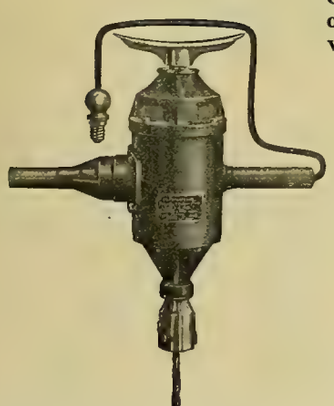
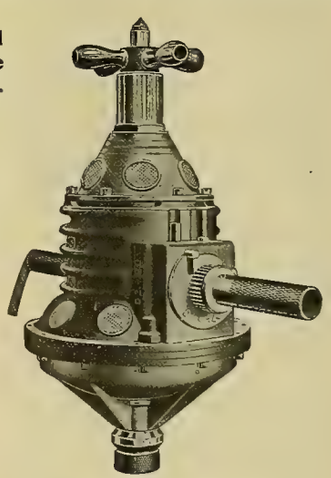
AIR-COOLED DUNTLEY ELECTRIC DRILLS

Give 60% efficiency, and on account of their economical operation are becoming extensively used. They are wound for 110, 220 and 550 volts d. c., capacities 3-8 in. to 2 1-2 in. in iron or steel.



Breast Drill Cap, 3-8 in., Weight 13 lbs.

Duntley Electric Drills Drilling and Reaming at Cramps Ship Yard, Philadelphia, Pa.



550-Volt Drill for Rail Bonding

Write for prices and full information. Drills sent on trial anywhere.

All Drills furnished with Grip Handle for operating switch when desired, also reversible or non-reversible.

CHICAGO **CHICAGO PNEUMATIC TOOL COMPANY** NEW YORK

Manufacturers of Air Compressors, Pneumatic Hammers, Drills, Appliances, Motor Hoists, Electric Drills, Etc.

Every P and S Socket is a unit of parts of equal endurance.
P and S are well balanced.
All current carrying parts are heavy enough to prevent heating at 100 per cent. overload for any indefinite period.
This is one of many good P and S points.

ELECTRICAL JOBBER ARRESTED

Every electrical jobber in this country who shall refuse to handle our new "FLEUR DE LIS" DRY CELLS will be prosecuted by us to the fullest extent of the business law. COMMON SENSE will tell you that it is to your advantage to handle the NEWEST ADVANCED DRY CELL. We allow you the largest possible margin in handling our cells and we guarantee them. The success we have met is the best test of the MERIT of our dry batteries.

FRENCH BATTERY COMPANY,
MADISON, WIS.

NEW YORK: E. E. Cary Co., 59 Park Place CHICAGO: A. J. Cox Co., Stock Exchange Bldg.

Important

This is what we have been fighting, from Maine to California.

The best evidence of our success in the fight lies in the large number of DUPLICATE lamp orders that have come in from some of the largest buyers of incandescent lamps in the United States. Every week you have seen one of our series "of anti-organization" ads in this paper. Keep your eye on them.

It will pay you to continue to read them, because we intend to continue to bring out very vital points and points decidedly to your interest.

St. Mary's Incandescent Lamp Company, ST. MARY'S, PA.

WM. M. ROTHSCHILD, Pres. LET US QUOTE YOU

THE SHELBY WAY

IS THE WAY TO MORE REVENUE

To all lamp users who have been using lamps that consume 56 watts, we offer this 45-watt lamp and guarantee it to give equal illumination, and, furthermore—to produce it in useful directions.

Why should you pay for more current than you need to produce a given illumination?

Let us send you a few testimonials from prominent engineers as to the comparative values of the different lamps.

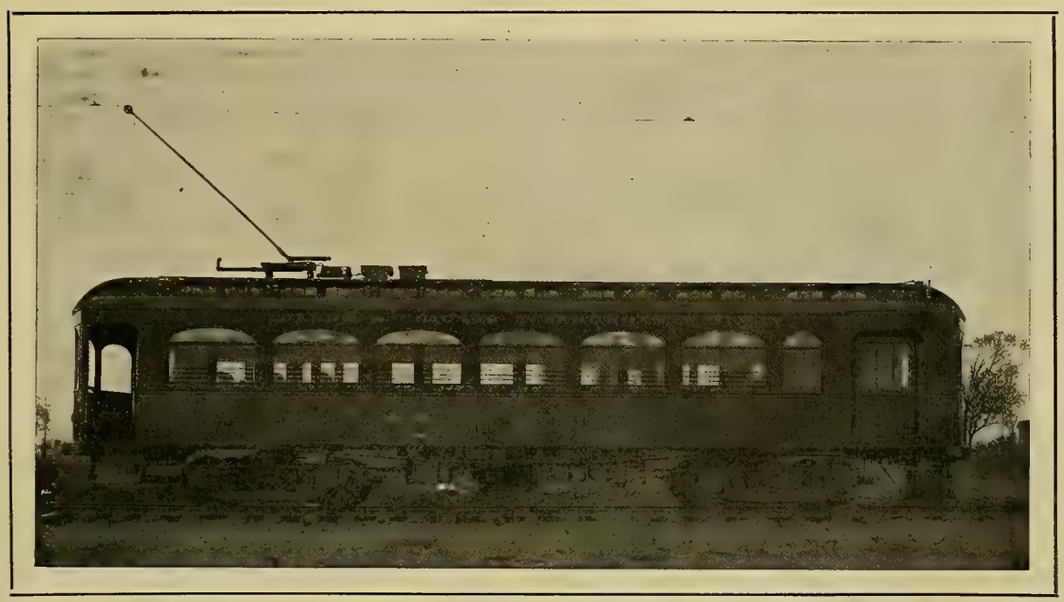
General Electric Company

Single-Phase Railway Apparatus



Interurban Car with General Electric Single-Phase Equipment for A. C. and D. C. Operation.

Every argument advanced for single-phase traction needs General Electric apparatus for its successful demonstration

Curtis Turbine Generator reliability is assurance of unfailing current supply.

General Electric Transforming and switching apparatus has standardized modern practice.

GE catenary line construction permits high speed with smooth continuous trolley wheel contact.

Cab Interior of Single-Phase Interurban Car with GE Equipment

Sprague General Electric multiple unit control guarantees greatest freedom in the use of cars or trains on alternating or direct current. A simple transfer, automatically made without stopping, allows continuous travel from system to system.

GE single-phase railway motors parallel in excellence the world's standard (GE) direct current motors.

The simplicity of the General Electric Company's electric railway apparatus reinforces every economy of single-phase railway operation

Anchors that hold

Showing the 5, 6 and 7 in. style.

Holds 12,500, 15,000 and 17,500 lbs. respectively.

Popular with Street Railway, Electric Light and Telephone Companies.

The 5, 6 and 7 inch

Stombaugh Guy Anchors

HAVE NO WELDS

The full rod is cast into the helix. Our experience has shown that welds are dangerous in rods of less than one inch in diameter.

The rods of Stombaugh Guy Anchors are not weakened by holes for pins or rivets.

STOMBAUGH GUY ANCHORS BORE INTO THE GROUND WITHOUT DISTURBING THE SOLID EARTH.

When in at the proper depth they are set. The strain can then be put on without fear of any back give. You are sure. An anchor is as strong as its weakest part. Stombaugh Guy Anchors have no weak parts.

A Dry Cell Lesson

In the school of Electrical Experience, subjected to the most exhaustive competitive tests, the

R.I. BAT

ROCK ISLAND
NEW PATENT
DRY BATTERY

passed muster with an average of 100 per cent as the BEST for ACTUAL SERVICE.

Telephone and electrical companies EVERYWHERE are enthusiastic sponsors for our Dry Cells. MADE BY HAND, they are SOUND all the way through. Unusually high grade of carbon used assures LESS internal resistance and LONGER life than OTHER batteries.

Give us a chance to DEMONSTRATE that claim and we'll add YOU to the big list of our regulars who have found to their advantage that there IS a difference in Dry Cells.

No. 8 for Telephones costs more but lasts much longer than No. 6, good for general purposes Department A will take your order.

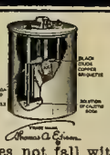
Something Electrical for Everybody

NEW YORK: 17 Park Pl. and 14 Murray St.
CHICAGO: 188 Fifth Ave

Factories: Jersey City, N. J.; Ravenna, Ohio



IF YOU USE Electric Current for sparking a gas engine, driving a fan motor, supplying current to an X-Ray outfit or operating railway signals, you want the Edison Primary Cell, the cheapest form of electric battery energy. The voltage does not fall with use; the battery needs no "resting." Once exhausted a renewal makes it good as new. For expert information on Electric Batteries send for Book "W E."

Edison Mfg. Co., 7 Lakeside Ave., ORANGE, N. J.

Northern Ring Type Generators and Motors

Afford power and light in large units. The equipments are highly efficient and readily applied for direct connection, coupled, gear or belt drive. The compactness of generating and power outfits embodying Northern apparatus is an important factor in many cases in the layout of power plants, etc.

The Latest Authority on

Electrical Instruments and Testing

BY

NORMAN H. SCHNEIDER

A book for every man who is interested in Electrical Instruments or Testing

BECAUSE

It is written for the practical man, and it gives the latest information.
It treats of modern instruments universally adopted.
It contains a complete chapter on testing with the Voltmeter, not explained in any other book.
The formulas given are fully explained and worked out in simple arithmetic.
The tests given are such as occur every day in the engine room, power house, telephone exchange, cable laying and constructors' work in the field.
It is written by a man who has had extensive practical experience in all branches of electrical testing.

210 Pages, over 100 illustrations and tables, handsome full limp leather, postpaid. Price, $2.00

A NEW EDITION, Care and Management of ELECTRIC POWER PLANTS

This is another practical book by N. H. Schneider, and among others contains chapters on **Storage Batteries, Standard Wiring, Switchboards and Instruments, Incandescent Lamp Testing.** If you have anything to do with Electric Power Plants you need this book.

294 pages, 203 illus., full limp leather, ... $2.50

OTTO ENGINES

Unsolicited Praise

OTTO

Farrand Bros., proprietors of the Lakeside Stock Farm, Colon, Michigan, write: "Our engine has run nine years without trouble, but all machinery is bound to wear out." They then ask for platinum with which to tip the electrodes,—a trifling and inexpensive repair. *Nine years* and just beginning to need attention. The average life of the *cheaper* makes is about *five* years. There is a moral in this for the prospective buyer,—Get the "**Otto**" for long life, and no trouble.

WOUND BY AUTOMATIC MACHINE

ACME WIRE CO., NEW HAVEN, CONN.
LICENSEES OF THE VARLEY DUPLEX MAGNET CO.
NEW YORK OFFICE: 26 COURTLANDT ST.

The Public Demand

for automatic telephone service has become so great that we have had to double the size and triple the capacity of our factory in order to supply enough equipment to keep pace with it.

Most of the big, new Independent Telephone Companies are starting in with automatic equipment and starting right.

Older Independent Companies are displacing their manual equipment by automatic as fast as the former is outworn or outgrown.

Why? Because the automatic system is a demonstrated success; because automatic service is ideal service, quick, sure and secret; because the operating company can produce it for less and sell it for more than manual service—a double increase in revenue.

Automatic equipment has a direct and positive influence on the securities of telephone companies using it. It makes the securities easier to market and more profitable to hold.

Our Automatic system has been adopted in the following cities:

Aberdeen, S. D.
Akron, Ohio.
Albuquerque, N. M.
Allentown, Pa.
Auburn, Me.
Auburn, N. Y.
Battle Creek, Mich.
Bellingham, Wash.

Type C, Glass Cover, for House Service

Polyphase for House Service

Direct Current Type

The Mechanical Features

of Westinghouse Wattmeters which make them the most accurate on the market are:

¶ The lightest moving element consistent with strength.

¶ Bearings with a minimum friction and a maximum life.

¶ Terminals that provide good surface insulation between opposite sides of the line and to ground, making it difficult to tamper with the registration of the meter.

¶ Coils so insulated as to prevent burnouts and grounding to laminations.

Prepayment Type

Single-Phase for Switchboard Service

Polyphase for Switchboard Service

ARC LAMPS TO BURN

In those dark places. When you buy an arc lamp to light up a room or dark passageway you want one that will burn when you want it to burn.

You want a lamp that gives so little trouble and needs so little attention that you forget you have an Arc Lamp except for the light it gives.

You want a light that lights, not one that consumes a great amount of current while the light is far below its rated candlepower.

Fort Wayne Arc Lamps

are best by test as our thousands of customers in the past agree. If you want the

Most and Best Light

from a lamp that is efficient and reliable, one that you can depend on at all times, write for detailed information and our Bulletin 1086.

"BULL DOG" STEEL GAIN

A pressed steel support for cross arms consisting of two plates, one engaging the arm and the other the pole. It provides a means of mounting arms without cutting gains. It strengthens the arm and pole. It facilitates the placing and alignment of cross arms. It saves braces on four and six pin arms. It can be purchased at a cost slightly exceeding the cost of cutting a gain. It is made for telephone and standard arms and will fit any pole.

Double Lever Starting Rheostats With Moisture Proof Resistance

C. & H. double lever rheostats are provided with automatic release and an interlocked circuit-breaker arm which fulfills the overload release function.

The circuit-breaker arm is independent of the starting arm and protects the motor from overload during the period of starting as well as when operating at full speed.

Where conditions demand the installation of a starter in a damp place the moisture-proof unit-type resistance will meet the most severe requirements.

The wire of each unit is wound on an insulating base and enclosed in a thin iron casing with a thin layer of insulating material between the casing and the resistance.

This construction gives positive moisture proofing and excellent heat radiating qualities.

The result is an enclosed resistance possessing time overload and intermittent overload capacity to a marked degree.

Bulletins 13 and 17 give prices.

THE NEW INCANDESCENT LAMP!

WE, too, make incandescent lamps of exceedingly good quality, workmanship beyond criticism, prices below others, quality considered.

We give a life guarantee, a maintenance of candle power guarantee and ship just what our customers call for. No 104-volt lamps for 115-volt circuit, to give momentarily high candle power and short life, in our shipments.

Two factories with sufficient working capital and experienced employees produce one result, namely, good material and satisfied customers. Get busy with us and secure our prices on a barrel of lamps. Shipments same as samples, as we make our own sample lamps, something not always done. With our ELK new lamps and NOVELTY renewed lamps we are in position to supply all classes of trade. Be sure to mail your inquiry to the **NOVELTY INCANDESCENT LAMP COMPANY, Emporium, Pa.,** so that it will reach the proper hands.

ALVIN & JACKSON, WESTERN SALES AGENTS, 502 Monadnock Block, Chicago, Ill.

Temperature Coefficient: NIL

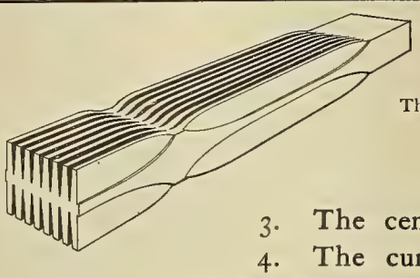
"ADVANCE" Resistance Wire

Absolutely no corrosion under any conditions

Especially recommended for measuring instruments and apparatus in which the wire is repeatedly heated and cooled.

Furnished also in Ribbon and Sheet

DRIVER-HARRIS WIRE CO.
Harrison, New Jersey



Gould Plate Construction

The following points are clearly brought out in the accompanying illustration of a fragment of the Gould Plate:

1. Large contact surface provided for active material.
2. The ribbed surface developed by our "spinning" process.
3. The central conducting web of unspun metal.
4. The current-distributing cross bars—all part and parcel of the plate.

More than any other type, the Gould Plate fulfills the requirements for economy, efficiency and long life. It will pay you to investigate. Write for bulletins.

KEARNEY CABLE CLAMPS

Fig. 1 shows a bird's-eye view of a corner pole with two 600,000 C. M. cables turning a right angle with the aid of four Kearney Cable Clamps.

Fig. 2 shows the same conditions with the aid of spliced joints. Let us compare the two pieces of work.

The work on Fig. 1 can be done by two line men in 30 to 40 minutes without the services of a ground man. No cable is cut. No solder or blow-torches are used. All that is necessary is to clean off four inches of insulation for each clamp, and clamp them to the bare surface of the wire. There is no waste cable.

The work on Fig. 2 can be done by two line men, and a ground man to tend the blow-torches and keep the solder hot, in not less than two hours, maybe more. They must cut the cable in four places (maybe some saw blades will be broken doing this). From 10 to 12 feet of cable will be wasted at each splice (maybe more). Figure up this cost on 20 feet of 600,000 C. M. Cable. Then there is the solder and the extra tape and gasoline needed. (Think of the danger of gasoline, not only to the men but to property.) A splice creates line loss, and is never as good as the solid wire.

Kearney Cable Clamps are much cheaper, more durable, stronger, save time, labor and material. Increase value of scrap cable. 25 or more will be shipped on 30 days' trial, freight prepaid. Ship them back if unsatisfactory. Pay for them otherwise.

GREAT FORTUNES

FROM LITTLE SAVINGS GROW

SHELBY LAMPS

Are Current Savers and Current Saved is Money Saved

$1.10 saved on one lamp, burned for 1000 hours, doesn't seem to be much money, but did you ever stop to consider what this means on a circuit of a great number of lamps in the course of a year?

The saving on lamps alone may mean the difference between *profit* and *loss*.

The only reason you use the kind of lamps you do is because you have never taken time to consider how much you can save by using **SHELBY 45-WATT LAMPS** and the manufacturers who have formerly sold you lamps have never called your attention to this feature.

REMEMBER—A Shelby 45-Watt Lamp gives as much useful light as an ordinary lamp consuming 56 watts.

LOOK FOR THE LICENSE LABEL IN THE STEM

General Electric Company

Single-Phase Railway Apparatus

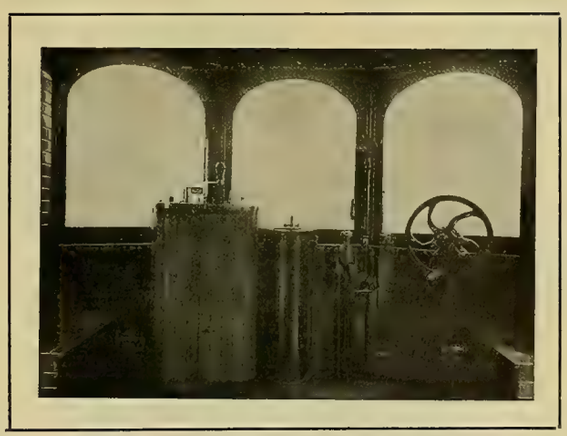
Interurban Car with General Electric Single-Phase Equipment for A. C. and D. C. Operation.

Every argument advanced for single-phase traction needs General Electric apparatus for its successful demonstration

Curtis Turbine Generator reliability is assurance of unfailing current supply.

General Electric Transforming and switching apparatus has standardized modern practice.

GE catenary line construction permits high speed with smooth continuous trolley wheel contact.



Cab Interior of Single-Phase Interurban Car with GE Equipment

Sprague General Electric multiple unit control guarantees greatest freedom in the use of cars or trains on alternating or direct current. A simple transfer, automatically made without stopping, allows continuous travel from system to system.

GE single-phase railway motors parallel in excellence the world's standard (GE) direct current motors.

The simplicity of the General Electric Company's electric railway apparatus reinforces every economy of single-phase railway operation

Important

This is what we have been fighting, from Maine to California.

The best evidence of our success in the fight lies in the large number of DUPLICATE lamp orders that have come in from some of the largest buyers of incandescent lamps in the United States. Every week you have seen one of our series "of anti-organization" ads in this paper. Keep your eye on them.

It will pay you to continue to read them, because we intend to continue to bring out very vital points and points decidedly to your interest.

HARTFORD STEAM BOILER INSPECTION & INSURANCE COMPANY

39th ANNUAL STATEMENT

JANUARY 1, 1906

CAPITAL	$ 500,000.00
SURPLUS	1,261,459.69
RESERVES	1,926,686.81
ASSETS	3,688,146.50

The **Hartford** is the only company which makes a specialty of, and does exclusively, a steam boiler inspection and insurance business.

The **Hartford** is the only company whose entire talent and energies are applied to the study of steam, to the scientific construction and installation of boilers, and to their periodical inspection by expert mechanics.

The **Hartford** is the only company whose entire assets and resources are held exclusively for the protection of steam users, and the payment of losses occasioned by the explosion of steam boilers, and for no other hazard whatsoever.

The **Hartford** is now doing nearly nine-tenths of the Inspection and Insurance of Steam Boilers in the New England States, and nearly two-thirds of the entire amount done throughout the United States.

Results are what Count

Everybody connected in any way with a telephone exchange—subscribers, management, and stockholders—demands results.

The subscribers demand results in the shape of good service; the management demands results in the shape of good service and economy of operation and maintenance; the stockholders demand results in the shape of profits, regular and substantial dividends and stable stock values.

The Automatic is producing results that satisfy everybody. The telephone equipment that will satisfy everybody is the kind you want.

Our Automatic system has been adopted in the following cities:

A SMALL
COMMON BATTERY SWITCHBOARD
IS A GOOD PAYING INVESTMENT

One of these cabinets received an award at the Pan-American Exposition. This cabinet will go well with the finest office furniture. It has front and rear panels made removable so that all apparatus is easily accessible for making connections.

We make a large variety of these small switchboards for use in Factories, Department stores, Hotels, Apartment buildings, Hospitals, Railroad offices, and all similar places where good service is required.

Our "Bulletin No. 11-F" gives a complete description of all our cabinets of this class.

Do not delay. Write today for our bulletins and estimates.

THE BEST IS THE CHEAPEST

WE MAKE ONLY THE BEST

The Edison BATTERY
A Good Sailor

The Edison Primary Battery is a good salt-water sailor, as appears by the following letter:

"In connection with your Batteries, and the perfect work thereof, I simply wish to say that we have used these batteries for four years on ships running to the far East (and it takes these steamers from six to seven months to complete a voyage), we find that when properly installed, according to your very simple directions, they will give a very much longer and better service than any batteries we have ever tried, or known.

"Thanking you for your prompt attention to our last order, we remain

Yours very truly,
The Rich Marine Fire Indc. System Co.
(Signed) Wm. Rich, Gen. Mgr."

Now any battery dealer can see that if the Edison Cell gives Mr. Rich good, satisfactory service, it will likewise please customers when used for Fire or Burglar Alarms, for X-ray Outfits or Electro-Medical Use, for Sparking Gas or Gasoline Engines, for Running Fan Motors, Slot Machines and Phonographs, or indeed for any purpose to which primary batteries are applied. The Edison Cell is absolutely dependable; it stands up to its duty to the end of its guaranteed life. We can further demonstrate to you that it is the cheapest form of battery energy. It is the best battery to sell, both because it makes permanent customers and because by educational advertising we help you to sell.

ALLIS-CHALMERS CO
MILWAUKEE WIS U S A

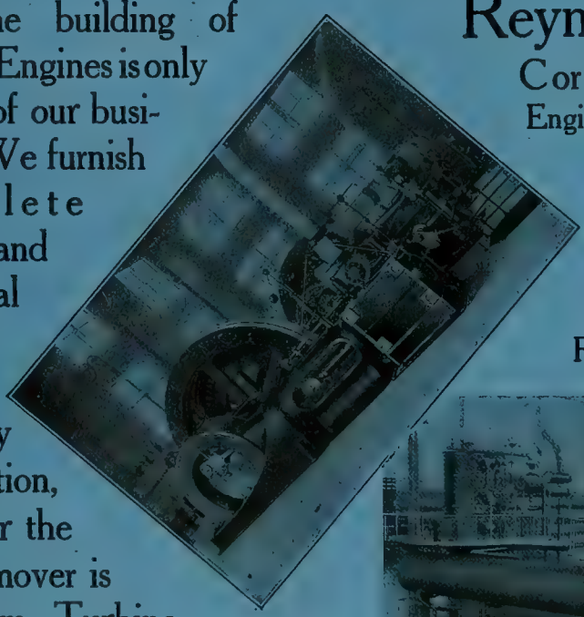
NOTWITHSTANDING THE LARGELY EXTENDED USE OF OTHER TYPES OF PRIME MOVERS

WE HAVE FELT NO FALLING OFF IN THE DEMAND FOR REYNOLDS-CORLISS ENGINES

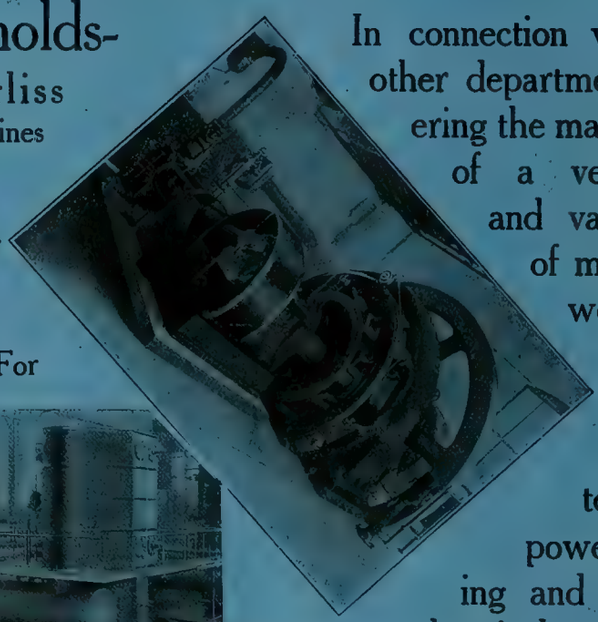
On the contrary, there has been an actual increase in orders for these celebrated engines, which we have built and are continuing to build by the thousands for power plants the world over, and the capacity of our works is taxed to the utmost to supply them.

But the building of Corliss Engines is only a part of our business. We furnish complete power and electrical equipments of every description, whether the prime mover is a Steam Turbine, Reciprocating Steam Engine, Gas Engine or Hydraulic Turbine, and for each of these we are taking orders in large volume.

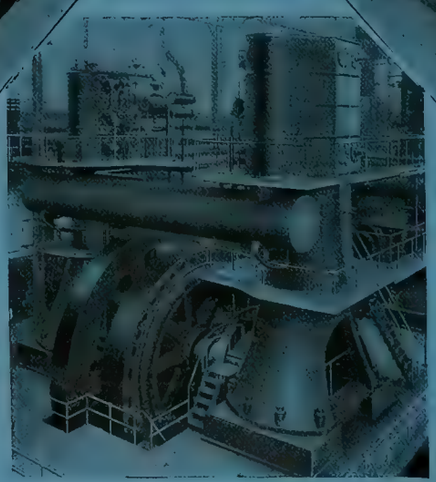
Reynolds-Corliss Engines



For



Every



Service

In connection with our other departments, covering the manufacture of a very large and varied line of machinery, we are constantly called upon to furnish power, lighting and auxiliary electrical equipments, including generators, motors, transformers, converters, motor generator sets, frequency changers, controllers, starters, choke coils, etc.

BECAUSE

Most purchasers now realize the advantage of having the complete equipment covered by one contract—thereby avoiding any division of responsibility and its attendant evils.

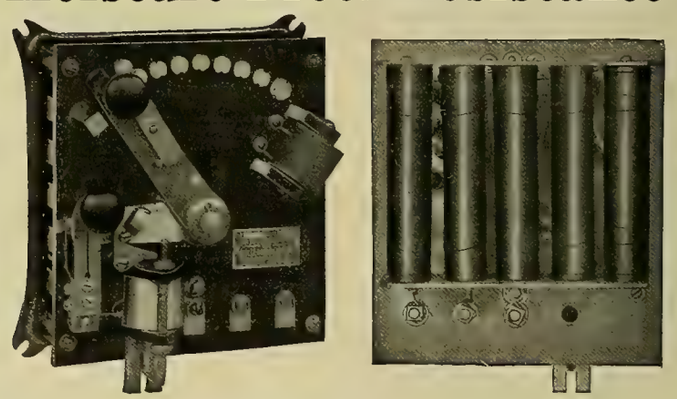
Milwaukee

General Sales Office
519 First National Bank Bldg., Chicago

Double Lever Starting Rheostats With Moisture Proof Resistance



C. & H. double lever rheostats are provided with automatic release and an interlocked circuit-breaker arm which fulfills the overload release function.

The circuit-breaker arm is independent of the starting arm and protects the motor from overload during the period of starting as well as when operating at full speed.

Where conditions demand the installation of a starter in a damp place the moisture-proof unit-type resistance will meet the most severe requirements.

The wire of each unit is wound on an insulating base and enclosed in a thin iron casing with a thin layer of insulating material between the casing and the resistance.

This construction gives positive moisture proofing and excellent heat radiating qualities.

The result is an enclosed resistance possessing time overload and intermittent overload capacity to a marked degree.

Bulletins 13 and 17 give prices.

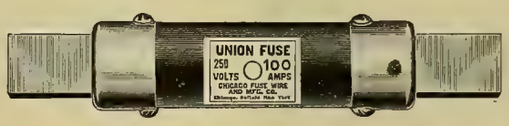
ENCLOSED

FUSES

BEST by TEST

Their operation is PERFECT and their superiority lies in the fact that they are absolutely safe and reliable

NO EXCESSIVE HEATING ON FULL LOAD



Conform strictly to the requirements of the National Electrical Code

SURE OPERATION ON OVERLOAD

For efficiency they are unequaled. Approved and listed by Underwriters National Electric Association.

PROMPT SHIPMENTS

CHICAGO NEW YORK

Stanley-G.I.

Great Reduction

in dimensions and weight of small polyphase induction motors has been effected by unique design and construction.

At the Same Time

efficiency, regulation, starting torque, heat radiation, rigidity of frame and mechanical construction throughout has been greatly improved in this type of motor.

Bulletin 149 gladly sent upon request.

Write Our Nearest House

General Electric Company

The Universal Transformer is the Type H

WHY?

Because it is Safe

The mica shield between primary and secondary coils assures maximum protection to life and property

Because it is Durable

Its insulation is permanent, its windings are impervious to moisture and its low and uniform temperature and compound treatment prevents all movement and chafing of insulation

Because it is Economical

It has long life, high efficiency, non-aging cores and close regulation, resulting in minimum lamp renewals

Anchors that hold

Showing the 5, 6 and 7 in. style.

Holds 12,500, 15,000 and 17,500 lbs. respectively.

Popular with Street Railway, Electric Light and Telephone Companies.

The 5, 6 and 7 inch

Stombaugh Guy Anchors

HAVE NO WELDS

The full rod is cast into the helix. Our experience has shown that welds are dangerous in rods of less than one inch in diameter.

The rods of Stombaugh Guy Anchors are not weakened by holes for pins or rivets.

STOMBAUGH GUY ANCHORS BORE INTO THE GROUND WITHOUT DISTURBING THE SOLID EARTH.

When in at the proper depth they are set. The strain can then be put on without fear of any back give. You are sure. An anchor is as strong as its weakest part. Stombaugh Guy Anchors have no weak parts.

NIAGARA TACHOMETERS

represent the acme of perfection in high-speed indicating devices: simplicity in construction, absolute accuracy, and require minimum attention.

The type "C" instrument shown is for direct connection to vertical shafts adapted to apparatus having high rotary speed where belt drive is not practical. We make instruments that will exactly meet your requirements. Write for catalogue.

NIAGARA TACHOMETER AND INSTRUMENT CO.
NIAGARA FALLS, N. Y.

THE NEW INCANDESCENT LAMP!

We offer you a strictly first class lamp at a reasonable price — **and that price is less than the "association price."**

It is "up to you," Mr. Lamp Buyer.

Ours is a New Lamp, but we know the business. Give us a trial and we will prove our proposition so you will stay with us.

As we mean business and want your trade, we urge you to "look us up," to investigate us fully, financially and otherwise, and we, therefore, refer you to the First National Bank of Emporium, Pa., and the Farmers & Merchants Bank of St. Marys, Pa.

OTTO ENGINES

Unsolicited Praise

OTTO

Farrand Bros., proprietors of the Lakeside Stock Farm, Colon, Michigan, write: "Our engine has run nine years without trouble, but all machinery is bound to wear out." They then ask for platinum with which to tip the electrodes,—a trifling and inexpensive repair. *Nine years* and just beginning to need attention. The average life of the *cheaper* makes is about *five* years. There is a moral in this for the prospective buyer,—Get the "**Otto**" for long life, and no trouble.

Results are what Count

Everybody connected in any way with a telephone exchange—subscribers, management, and stockholders—demands results.

The subscribers demand results in the shape of good service; the management demands results in the shape of good service and economy of operation and maintenance; the stockholders demand results in the shape of profits, regular and substantial dividends and stable stock values.

The Automatic is producing results that satisfy everybody. The telephone equipment that will satisfy everybody is the kind you want.

Our Automatic system has been adopted in the following cities:

Aberdeen, S. D.
Akron, Ohio.
Albuquerque, N. M.
Allentown, Pa.
Auburn, Me.

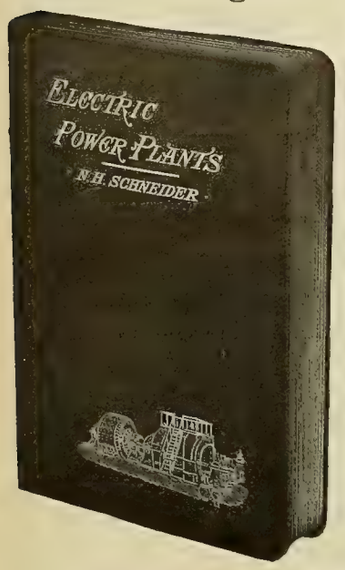
The Care and Management of

Electric Power Plants

By NORMAN H. SCHNEIDER

Here is a Book Every Steam and Electrical Engineer Should Have



Because it deals practically with the care and management of power plants; direct and alternating current motors have been given a special chapter and modern forms of starting rheostats are described at length.

There are special chapters on the electrical current, standard wiring with formulas and tables, etc., direct and alternating current dynamos, motors and motor starters, testing electric lamps and dynamos and measuring instruments, storage batteries, engineering notes, belts, pulleys, horsepower, etc.

290 PAGES, 203 ILLUSTRATIONS

Full Limp Leather, Round Corners, Gilt Edges . . **$2.50**

THE LATEST AUTHORITY ON

ELECTRICAL INSTRUMENTS AND TESTING

This is another practical book by N. H. Schneider. The tests given are such as occur every day in the engine room, power house, telephone exchange, cable laying and constructor's work in the field. 210 pages, over 100 illustrations and tables. Full limp leather. $2.00 postpaid.

The How and Why of Electricity

By CHARLES TRIPLER CHILD

Second Edition, Revised and Enlarged **Price $1.00, Postage Prepaid**

WHILE the added matter has brought the volume up to date in every phase of this study, the original text, as prepared by its brilliant author, remains to entrance the reader. New illustrations have been made where it was deemed possible to further illuminate the explanatory matter. The book contains no mathematics. The phenomena of electricity are treated in splendidly arranged word pictures, and the engineer, the student and the non-technical reader, alike, may be benefited and entertained by this book.

CONTENTS

CHAPTER	
	Preface
I	The Electric Current
II	The Electric Battery
III	The Effects of Electric Flow in the Circuit—Heat and Chemical Action
IV	The Effects of Electric Flow Outside the Circuit—Magnetism and Induction—The Electrical Units
V	Electromagnets—The Telegraph
VI	Electric Signaling Apparatus
VII	The Relations Between Magnets and Electric Currents
VIII	Induction and Reactive Coils
IX	The Telephone
X	Telephone Accessories
XI	The Mechanical Generation of Electricity
XII	The Dynamo Machine
XIII	Various Types of Dynamo Machines
XIV	Alternators—Polyphase Currents
XV	The Electric Motor
XVI	The Electric Railway
XVII	Polyphase Currents and Motors
XVIII	Electrical Power Transmission
XIX	The Incandescent Light
XX	The Arc Light
XXI	Electrochemistry—Storage Batteries
XXII	Wireless Telegraphy
XXIII	Radiation—X-Rays
XXIV	Recent Theories.

POLE DEALERS ADVERTISING IN THE WESTERN ELECTRICIAN OBTAIN MOST EXCELLENT RESULTS BECAUSE IT PLACES THEM IN TOUCH WITH ACTUAL BUYERS OF POLES. TRY A CARD.

When a man's electrical ideas flow freely; when he discusses electrical subjects intelligently and glibly, you will be pretty safe in assuming that he keeps in touch with electrical progress by perusing the Western Electrician 52 times a year.

A PRACTICAL BOOK
FOR PRACTICAL MEN
"MODERN WIRING DIAGRAMS AND DESCRIPTIONS FOR ELECTRICAL WORKERS."

By Henry C. Horstmann and Victor H. Tousley. 160 pages, over 200 illustrations. Full leather binding, red edges. Pocket size 4 x 6. Price, net, $1.50.

A work that not only tells you how to do it, but shows you.

THIS BOOK tells how to wire for call and alarm bells. For burglar and fire alarm. How to run bells from dynamo current. How to install and manage batteries. How to test batteries. How to test circuits. How to wire for enunciators; for telegraph and gas lighting. It tells how to locate "trouble" and "ring out" circuits. It tells about meters and transformers. It contains 30 diagrams of electric lighting circuits alone. It exolains dynamos and motors; alternating and direct current. It gives 10 diagrams of ground detectors alone. It gives "Compensator" and Storage Battery installation. It gives simple and explicit explanations of the "Wheatstone Bridge" and its uses as well as volt meter and other testing. It gives a new and simple wiring table, covering all voltages and all losses or distances, etc., etc.

"BULL DOG" STEEL GAIN
A pressed steel support for cross arms consisting of two plates, one engaging the arm and the other the pole. It provides a means of mounting arms without cutting gains. It strengthens the arm and pole. It facilitates the placing and alignment of cross arms. It saves braces on four and six pin arms. It can be purchased at a cost slightly exceeding the cost of cutting a gain. It is made for telephone and standard arms and will fit any pole.

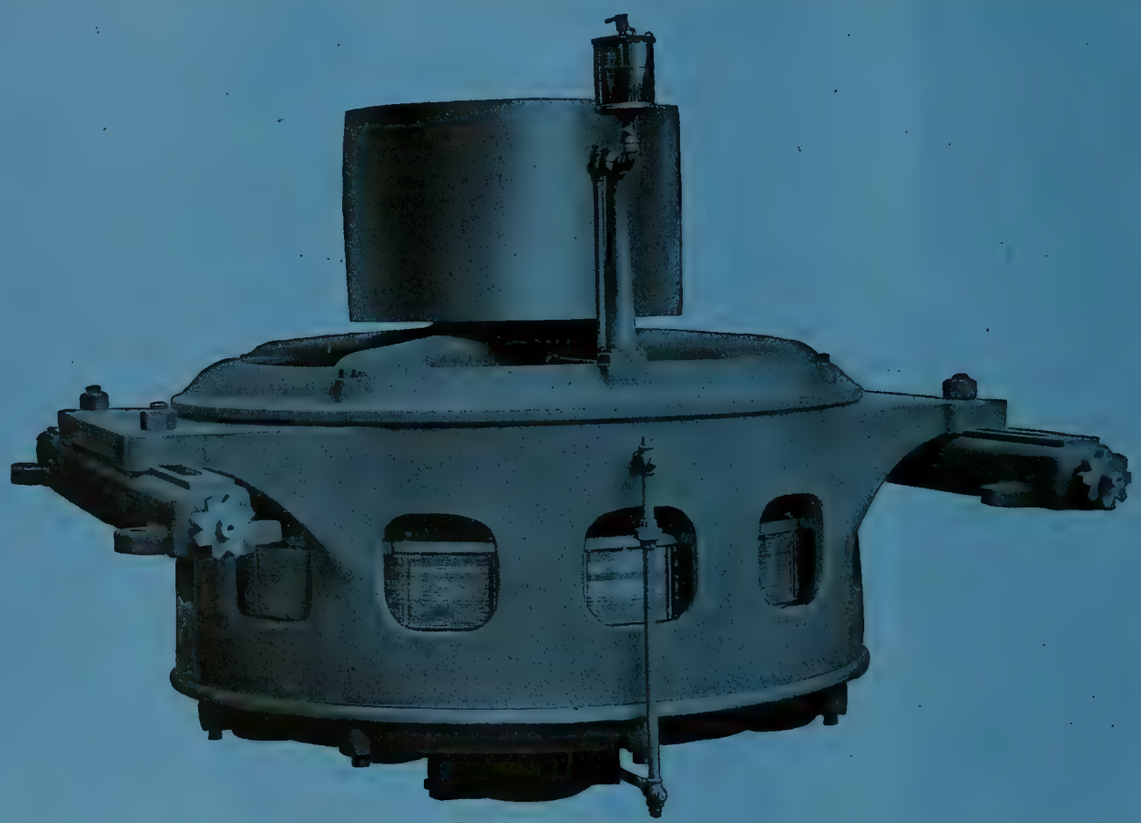
MILWAUKEE WIS U S A

INDUCTION MOTORS

ALL TYPES ALL SIZES FOR EVERY SERVICE

The Induction Motors built by this Company have been very carefully designed and, from the first, have given uniformly satisfactory service. They are now used in a great variety of industries, and have shown that they are capable of meeting the most exacting requirements. "Quality" is the index to their construction. In no case has efficiency, durability or operation at conservative temperatures been made of secondary importance merely to secure light weight and the "cheapness" commonly associated with it.



Allis-Chalmers Vertical Induction Motor

Our Induction Motors are, in all respects, the best machines for general power distribution on alternating current circuits. In their general performance they resemble very closely the direct-current shunt-wound motors manufactured by this company and are adapted to fully as wide a range of service. In fact, because of the absence of commutator and brushes, they can often be used in places where direct-current motors would be liable to give trouble on account of dust, flying particles or explosive gases—as in cement works, powder mills, paint factories, mines, etc. Essentially, of course, they are constant speed machines and best suited to work of that character, but by means of a suitable device, they can be operated at variable speed, as in the case of the electric hoists which we are now building.

Great care has been taken to reduce the magnetizing current to a minimum, thereby increasing the power factor and insuring high efficiency. The temperature rise under continuous full-load operation is very slight, thus allowing a liberal margin for overloads without injury to the windings. These motors will also give from two to three times full load running torque without stopping or "pulling out." For further particulars see our bulletin No. 1040 (Revised Edition).

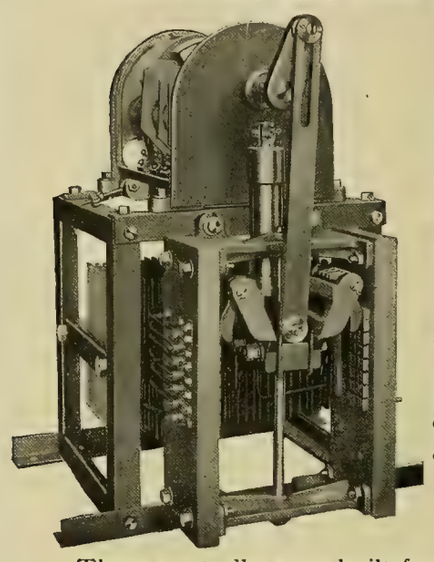
COMPACTNESS, RIGIDITY, STRENGTH

An elevator controller that will stand severe service must have these qualifications.



Bulletin 56 and 57 C & H. A. C. elevator controllers are strong mechanically and properly designed electrically.

Reliable service and long life are assured.

These controllers are built for slip-ring or squirrel-cage alternating current motors.

The reversing switch is of the drum type mounted to take up least space.

Resistance commutator consists of heavy copper bars carried on heavy slate panels.

All contacts are of copper with large current-carrying capacity.

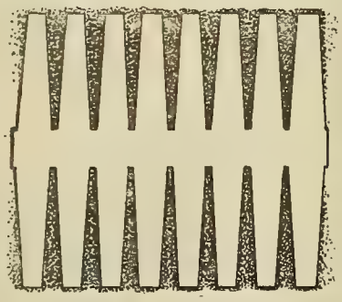
Furnished also in Ribbon and Sheet

DRIVER-HARRIS WIRE CO.
Harrison, New Jersey



The Active Material of the Gould Battery Plate

is maintained in close mechanical and electrical contact to the support plate.

The illustration shows in cross section (enlarged) a fragment of a Gould Plate and the ribbed formation of the contact surface. The active material is formed, electrochemically, out of the metal composing the ribs, filling the space, as shown, with densely-packed but highly-porous elements. Expansion and contraction are amply compensated for, and mechanical dislodgment of active material is nearly impossible.

Every detail of the Gould Battery has been developed to secure great capacity, high efficiency and long life.

Complete bulletins upon request.

P and S Sockets are neat in appearance and easily connected.

There is no rattling or shaking loose of parts.

And during process of manufacture, they are inspected thrice by men who *know* the socket proposition; therefore, all defects in workmanship and finish are eliminated.

They're Perfect and Sure.
They're Perfect and Satisfactory.
They're P and S.
See that the Sockets you use bear the guarantee P and S on the key.

TRANSFORMERS

In addition to the motor load your solicitors put on your line during the Summer, you will very shortly have to take care of the Winter Lighting Load. How is your Transformer stock? You will not want your present transformers excessively overloaded, and will probably be in the market for additional equipments.

In transformers of our manufacture, the form of coil winding permits of good insulation with good regulation—a combination which cannot be obtained in transformers of other manufacture. Wagner transformers are of the "two in one kind." You can operate successfully lighting loads and motor loads from the same Wagner Transformer.

LET US SEND YOU OUR BULLETIN No. 72H

CHICAGO NEW YORK

THE NEW Incandescent LAMP

WE, too, make incandescent lamps of exceedingly good quality, workmanship beyond criticism, prices below others, quality considered.

We give a life guarantee, a maintenance of candle power guarantee, and ship just what our customers call for. No 104-volt lamps for 115-volt circuit, to give momentarily high candle power and short life, in our shipments.

Two factories with sufficient working capital and experienced employees produce one result, namely, good material and satisfied customers. Get busy with us and secure our prices on a barrel of lamps. Shipments same as samples, as we make our own sample lamps, something not always done. With our **Elk** new lamps and **Novelty** renewed lamps, we are in position to supply all classes of trade. Be sure to mail your inquiry to the

NOVELTY INCANDESCENT LAMP CO.

Emporium, Penna.

so that it will reach the proper hands. **ALVIN & JACKSON,** WESTERN SALES AGENTS, 502 Monadnock Block, Chicago, Ill.

WANTED, FOR SALE *and similar* **WANT COLUMN** *advertisements (50 words or less), $1.50 an insertion; additional words 3c each.* **POSITION WANTED** *advertisements (50 words or less), $1.00 an insertion; additional words 2c each.*

WANTED—POSITION

As manager or superintendent of electric light or power company. Now have position as superintendent, but desire a change. 16 years in the business. Can furnish recommendations; would take stock in company as a part pay. Married, 31 years of age. Address Box 670, care Western Electrician, 507 Marquette Bldg., Chicago.

WANTED IMMEDIATELY

100 class 31, form 2, type A, double carbon, 9.6 ampere, 2,000 c. p. Brush Arc Lamps. Must be in good condition. Address Box 668, care of Western Electrician, 507 Marquette Building, Chicago.

WANTED

I am in a position to purchase outright, to manufacture and put on the market or to manufacture under royalty any first-class electrical device or specialty. Address, giving full particulars in first reply, and I will accord an interview, Box 669, care of Western Electrician, 507 Marquette Building, Chicago.

WANTED

First-class, hustling salesman to sell Rock Island Batteries, either as a side line or as an entire line. Liberal salary and commission paid to the right man. Apply in person or in writing to Rock Island Battery Co., Ninth and Sycamore Sts., Cincinnati, Ohio.

WANTED

to buy for cash—one 300 K. W., 125 cycle, 2080 volt, compound wound, 3 bearing, single-phase alternating current generator, with self-oiling bearings in guaranteed first-class operating condition. Give complete description of machine, where located and lowest cash price f. o. b. point of shipment. Address Box 671, care Western Electrician, 507 Marquette Bldg., Chicago.

FOR SALE

Will sell for $5,000 one half interest in water and light plant, to proper party who will assume management. City of 4,000, no competition. Can furnish engineers' report and best authority on franchise and titles. Address F. H. EARL, 85 Dearborn St., Chicago, Ill.

Results are what Count

Everybody connected in any way with a telephone exchange—subscribers, management, and stockholders—demands results.

The subscribers demand results in the shape of good service; the management demands results in the shape of good service and economy of operation and maintenance; the stockholders demand results in the shape of profits, regular and substantial dividends and stable stock values.

The Automatic is producing results that satisfy everybody. The telephone equipment that will satisfy everybody is the kind you want.

Our Automatic system has been adopted in the following cities:

A SMALL
COMMON BATTERY SWITCHBOARD
IS A GOOD PAYING INVESTMENT

One of these cabinets received an award at the Pan-American Exposition. This cabinet will go well with the finest office furniture. It has front and rear panels made removable so that all apparatus is easily accessible for making connections.

We make a large variety of these small switchboards for use in Factories, Department stores, Hotels, Apartment buildings, Hospitals, Railroad offices, and all similar places where good service is required.

Our "Bulletin No. 11-F" gives a complete description of all our cabinets of this class.

Do not delay. Write today for our bulletins and estimates.

KNOWLEDGE IS POWER

Let Us Help You To Learn More

An Excellent Opportunity to Obtain PRACTICAL Information on

ELECTRIC LIGHT PLANTS

THE pithy old adage, "Knowledge is Power," is so true as to be self-evident. We must know things to do things. For practical men, practical information is wanted. To supply this need, constantly arising as new men enter the electrical field, the Western Electrician, beginning with the issue of July 7th, the first of the new volume, entered upon the publication of a valuable and notable series of articles (constituting, when finished, a complete treatise on the subject) on

The Small Central Station

Practical Hints on Its Construction and Operation

The scope of this eminently practical work, written by experienced authorities on the subject, is well indicated by the list of chapter headings:

I. General Observations.
II. Building and Foundations.
III. Fuel and Waterpower.
IV. Boilers and Setting.
V. Operation of Boilers.
VI. Engines.
VII. Steam Turbines.
VIII. Belting and Shafting.
IX. Electrical Equipment—Generators—Switchboard.
X. Arc and Incandescent Lamps.
XI. Instruments.
XII. Transformers.
XIII. Line Construction.
XIV. Distribution.
XV. Cost of Plants.
XVI. General Data.

The articles supply data relating to small and medium-sized stations using overhead construction, and are especially adapted for intending purchasers of electric-light plants and practical men. Within this field the ground is thoroughly covered in view of the requirements of the best modern practice. Operations and construction are dealt with at length, and the information given has been compiled from the experiences reported by central station managers operating in all parts of the United States, handling various types and sizes of machinery. The series will be enriched with **numerous illustrations, diagrams and tables.**

These articles will be of much value to all readers of the Western Electrician, new and old, interested in the practical operation of electric-light plants.

REMEMBER that this noteworthy series on **Electric Light Plants** began in the July 7th issue of the Western Electrician, and will run for from four to six months.

Westinghouse

Static Ground Detectors

For One, Two and Three Phase Circuits

For Over Two and Three Phase Circuits

Like all Westinghouse Instruments they are

"Just a little better"

Described in Folder 4005

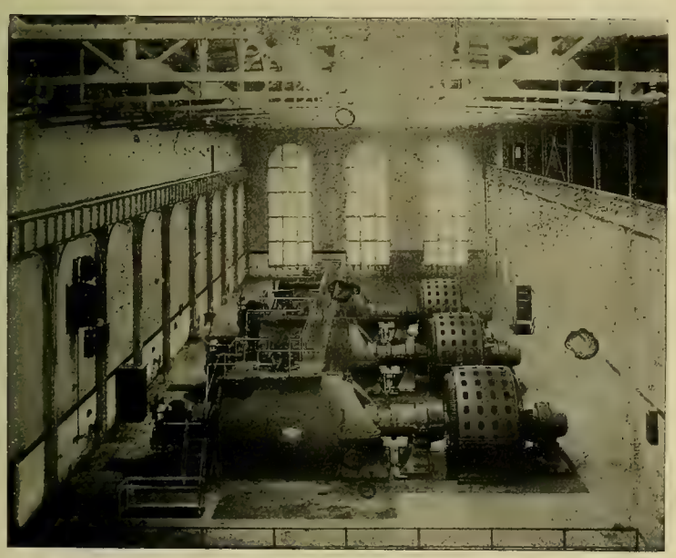
For Three Phase Circuits Only]

Westinghouse Electric & Mfg. Co.

Atlanta	Buffalo	Cleveland	Detroit	New Orleans	Pittsburg	San Francisco
Boston	Chicago	Dallas	Los Angeles	New York	St. Louis	Seattle
Baltimore	Cincinnati	Denver	Minneapolis	Philadelphia	Salt Lake City	Syracuse

For Canada: Canadian Westinghouse Co., Ltd., Hamilton, Ontario. Mexico, G. & O. Braniff & Co., City of Mexico.

Ample Assurance



Engine Room of the Long Island City Plant of the Long Island Railroad showing three 5500 K. W. Westinghouse Turbine Generating Units.

of successful operation in service is guaranteed by the thorough and severe tests every

Westinghouse Turbine

must undergo before leaving the shops. This in a great measure explains the absence of trouble experienced with Westinghouse Turbines after installation. We know just what they will do before they are shipped.

The economy records of every turbine shipped by us are open for inspection

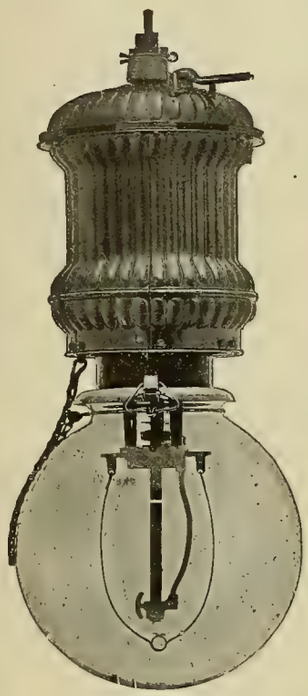
Westinghouse

D. C. Multiple Arc Lamps



Outdoor Proof

Their Qualities

Strength and Durability
Reliability in Service
Simplicity of Design
Interchangeable Parts
Accessibility of Parts

Fire-Proof Construction

110-volt lamps have been short circuited at the arc for several hours, until the porcelains were heated to a dull red, and placed in service without being allowed to cool, with no effect upon their successful operation.

Fully Described in Illustrated Circular 1102

Lamp and Resistance

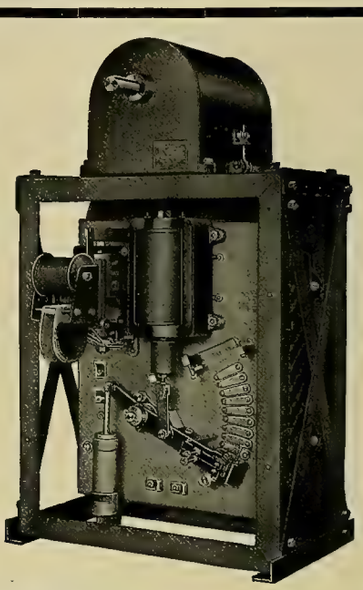
SELF-CONTAINED

Rugged Mechanically and Electrically



AUTOMATIC MAIN LINE SWITCH PREVENTS ATTEMPTED SUDDEN REVERSAL OF MOTOR

The Controller for Direct Current Elevator Motors

It embodies in one compact piece of mechanism a self-starter, main line switch and reversing switch.

Designed especially for slow or medium speed passenger or freight elevators where a very strong and rugged construction is desired.

This is another of our new line of elevator controllers and is described in Bulletin 53. We also build controllers for A. C. elevators and for high-speed installations.

Full Candle Power Every Minute of its Long Life

Is one of the essential features of the

COLUMBIA LAMP

The COLUMBIA LAMP gives a pure white light and throws it in all directions, and another point to remember is that the COLUMBIA gives a maximum light with a minimum current.

But after all is said, there is only one time when the good qualities of the COLUMBIA LAMP is fully appreciated, and that is when you are actually using them. Send us a trial order and be convinced. Our yearly contract plan will interest you.

YOU should have

The Latest Authority on

Electrical Instruments and Testing

BY

NORMAN H. SCHNEIDER

A book for every man who is interested in Electrical Instruments or Testing

BECAUSE

It is written for the practical man, and it gives the latest information.
It treats of modern instruments universally adopted.
It contains a complete chapter on testing with the Voltmeter, not explained in any other book.
The formulas given are fully explained and worked out in simple arithmetic.
The tests given are such as occur every day in the engine room, power house, telephone exchange, cable laying and constructors' work in the field.
It is written by a man who has had extensive practical experience in all branches of electrical testing.

210 Pages, over 100 illustrations and tables, handsome full limp leather, postpaid. Price, $2.00

A NEW EDITION, Care and Management of
ELECTRIC POWER PLANTS

This is another practical book by N. H. Schneider, and among others contains chapters on **Storage Batteries, Standard Wiring, Switchboards and Instruments, Incandescent Lamp Testing.** If you have anything to do with Electric Power Plants you need this book.

294 pages, 203 illus., full limp leather, ... $2.50

BRANCHES: CHICAGO: 192 Desplaines St. BOSTON: 7 Otis St. SAN FRANCISCO: 766 Folsom St.

P and S Sockets are one solid, perfect piece of electrical mechanism.

No breaking loose.

Isn't that an important consideration?

The Edison Screw Shells in P and S Sockets will positively not pull out under undue strain, for they are held firmly in place by screws with comparatively large heads.

Both shell and cap are firmly held together by two screws locked in a bayonet joint in the cap.

Stanley-G.I.

Type "K" Arc Lamps

for all circuits and conditions, both Alternating and Direct Currents. Steel top from one piece, cold rolled. Shell made from copper, steel or brass, in various finishes, and is exceedingly strong. Double rod construction, the latest improvement in arc lamp design.

Resistances are wound on porcelain bobbins, and may be removed and replaced separately or collectively "at the lamp" in two minutes. Absolutely non-inflammable insulation -- glass beads used exclusively. Bulletin 613 fully covers this subject.

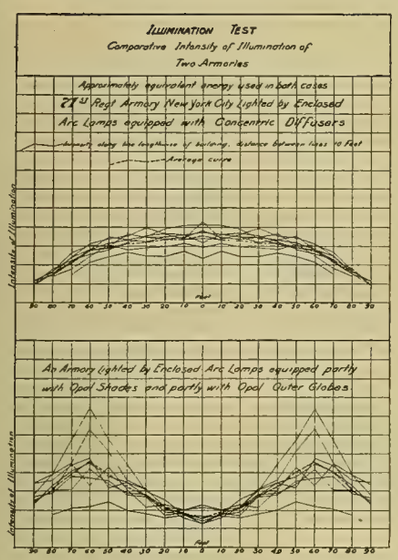
ILLUMINATING ENGINEERING



A COMPARISON

This graphical comparison of curves of illumination intensity shows the results of actual tests made with the candle-foot photometer in two armories differently lighted but using the same energy per square foot of floor area.

The single example shown here is typical of many where the use of the combination of General Electric arc lamps with concentric diffusers has improved the illumination of large and small interiors.

The decision of the engineer who advocates the use of concentric diffusers with enclosed arc lamps is well fortified by such results.

Anchors that Hold

Showing the 5, 6 and 7 in. style.

Holds 12,500, 15,000 and 17,500 lbs. respectively.

Popular with Street Railway, Electric Light and Telephone Companies.

The 5, 6 and 7 inch

Stombaugh Guy Anchors

HAVE NO WELDS

The full rod is cast into the helix. Our experience has shown that welds are dangerous in rods of less than one inch in diameter.

The rods of Stombaugh Guy Anchors are not weakened by holes for pins or rivets.

STOMBAUGH GUY ANCHORS BORE INTO THE GROUND WITHOUT DISTURBING THE SOLID EARTH.

When in at the proper depth they are set. The strain can then be put on without fear of any back give. You are sure. An anchor is as strong as its weakest part. Stombaugh Guy Anchors have no weak parts.

THE NEW INCANDESCENT LAMP!

We offer you a strictly first class lamp at a reasonable price — **and that price is less than the "association price."**

It is "up to you," Mr. Lamp Buyer.

Ours is a New Lamp, but we know the business. Give us a trial and we will prove our proposition so you will stay with us.

As we mean business and want your trade, we urge you to "look us up," to investigate us fully, financially and otherwise, and we, therefore, refer you to the First National Bank of Emporium, Pa., and the Farmers & Merchants Bank of St. Marys, Pa.

OTTO ENGINES

Unsolicited Praise

Farrand Bros., proprietors of the Lakeside Stock Farm, Colon, Michigan, write: "Our engine has run nine years without trouble, but all machinery is bound to wear out." They then ask for platinum with which to tip the electrodes,—a trifling and inexpensive repair. *Nine years* and just beginning to need attention. The average life of the *cheaper* makes is about *five* years. There is a moral in this for the prospective buyer,—Get the "Otto" for long life, and no trouble.

SAMSON TURBINE

The illustration shows the large NIAGARA design, HORIZONTAL SHAFT TURBINES recently installed by us, for the TELLURIDE POWER TRANSMISSION CO. power station, Logan, Utah. Tests conducted by competent engineers developed as follows:

HEAD.	GATEAGE.	SPEED.	H. P.	GENERATOR EFFI'CY.	TURBINE EFFI'CY.
211.5 ft.	½	400 r.p.m.	1038	95.20%	73.80%
209.7 ft.	¾	400 r.p.m.	1560	96.50%	83.59%
208.9 ft.	Full	400 r.p.m.	1677	96.70%	80.57%

These results have never been equaled by any turbine of the Horizontal Shaft Design, operating under equally HIGH HEADS. The test was made AFTER TURBINES WERE INSTALLED, direct coupled to Generators. Francis' weirs and formulæ for discharge were used. The original test reports on file at our offices. These turbines are all fitted with our SAMSON BALANCED GATES. Note especially the UNIFORM SPEED AT ALL GATEAGES.

THE JAMES LEFFEL & CO., 307 Lagonda St., SPRINGFIELD, OHIO, U. S. A.

Reduced Telephone Rates

IN CHICAGO

If the franchise of Chicago Telephone Company in the City of Chicago is extended, the following rates have been proposed for the Chicago Exchange.

Results are what Count

Everybody connected in any way with a telephone exchange—subscribers, management, and stockholders—demands results.

The subscribers demand results in the shape of good service; the management demands results in the shape of good service and economy of operation and maintenance; the stockholders demand results in the shape of profits, regular and substantial dividends and stable stock values.

The Automatic is producing results that satisfy everybody. The telephone equipment that will satisfy everybody is the kind you want.

Our Automatic system has been adopted in the following cities:

BATTERY ENERGY

There are no batteries JUST AS GOOD as the

ROCK ISLAND
NEW PATENT
DRY CELLS

It is a battery of service with an international reputation MAINTAINED in tests that were not only exhaustive but practical. The method of Rock Island manufacture is conducive to long life of the battery. Carefully constructed by hand, our dry cells will LAST LONGER than machine made batteries. We use a carbon of the highest grade, wrapped in a chemically prepared cloth and SET IN A WALL OF CHEMICAL

Our cells are treated to retain moisture. Neither heat nor cold affects them. The current is constant. The minimum of internal resistance and maximum of recuperative power are strong points.

Standard No. 8 is a battery good for all HIGHEST CLASS work—for engines and Telephone Exchanges. For general purposes No. 6 will fill the bill. Our prices will SURPRISE you. Write Department A.

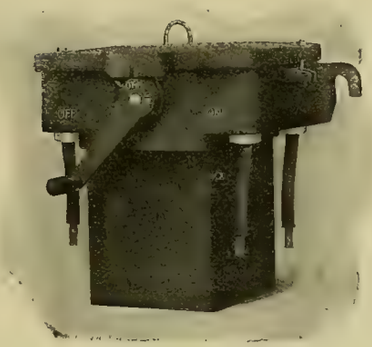
Westinghouse

Outdoor Type D Oil Switch

A double-pole, single-throw switch enclosed in a compact weather-proof case. Weight only 40 pounds. Can be easily mounted on poles or cross arms, or may be hung in manholes where underground systems are used.



Designed especially for use with A. C. Series Arc Lighting Systems for controlling banks of transformers, isolating underground or overhead feeders and mains, and for operating inductive loads of all kinds.

Maximum Capacity 200 Amperes at 3,300 Volts

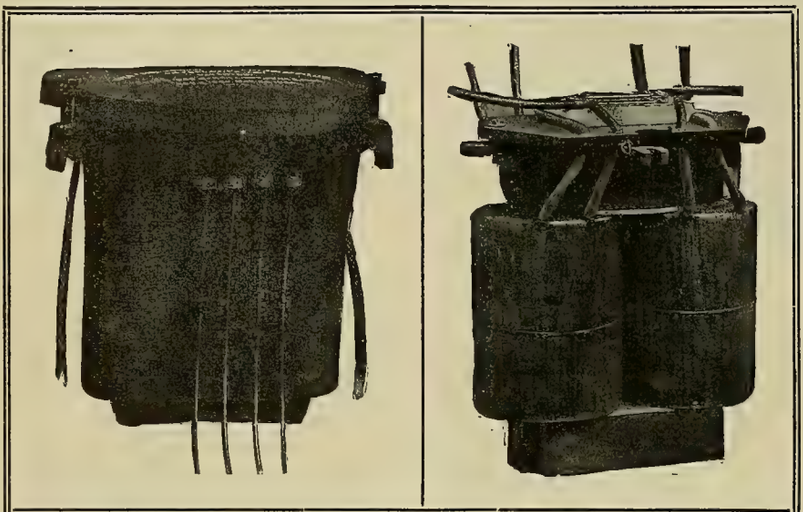
Westinghouse

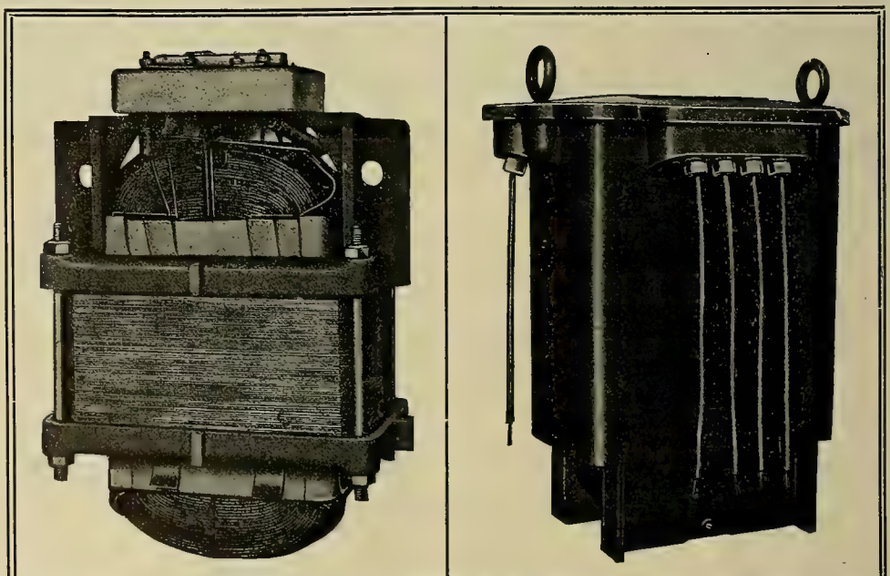
Transformers



Type C—Core Type

Each type has its merits; the choice remains with you.

Whichever you choose will be a "Westinghouse" with all the name implies.



Type OD—Shell Type

Westinghouse Electric & Mfg. Co.

Atlanta	Buffalo	Cleveland	Detroit	New Orleans	Pittsburg	San Francisco
Boston	Chicago	Dallas	Los Angeles	New York	St. Louis	Seattle
Baltimore	Cincinnati	Denver	Minneapolis	Philadelphia	Salt Lake City	Syracuse

For Canada: Canadian Westinghouse Co., Ltd., Hamilton, Ontario
Mexico, G. & O. Braniff & Co., City of Mexico

Out of Sight

A great many times transformers are installed in out of the way places, perhaps not given any attention for months and months, but still expected to do their work without question.

This is the critical test and many transformers break down under the conditions. There's a reason. There's also a reason why you can trust a Type A transformer any place, all the time.

We have the reason. It's in the transformer.

"BULL DOG" STEEL GAIN

A pressed steel support for cross arms consisting of two plates, one engaging the arm and the other the pole. It provides a means of mounting arms without cutting gains. It strengthens the arm and pole. It facilitates the placing and alignment of cross arms. It saves braces on four and six pin arms. It can be purchased at a cost slightly exceeding the cost of cutting a gain. It is made for telephone and standard arms and will fit any pole.

INDUCTION MOTORS

ALL TYPES ALL SIZES FOR EVERY SERVICE

The Induction Motors built by this Company have been very carefully designed and, from the first, have given uniformly satisfactory service. They are now used in a great variety of industries, and have shown that they are capable of meeting the most exacting requirements. "Quality" is the index to their construction. In no case has efficiency, durability or operation at conservative temperatures been made of secondary importance merely to secure light weight and the "cheapness" commonly associated with it.

Allis-Chalmers Induction Motor—Standard Type

Send for a copy of our Bulletin 1040 (Revised Edition)

Allis-Chalmers Vertical Induction Motor

Our Induction Motors are, in all respects, the best machines for general power distribution on alternating current circuits. In their general performance they resemble very closely the direct-current shunt-wound motors manufactured by this company and are adapted to fully as wide a range of service. In fact, because of the absence of commutator and brushes, they can often be used in places where direct-current motors would be liable to give trouble on account of dust, flying particles or explosive gases—as in cement works, powder mills, paint factories, mines, etc. Essentially, of course, they are constant speed machines and best suited to work of that character, but, by means of a suitable device, they can be operated at variable speed, as in the case of the electric hoists which we are now building.

Great care has been taken to reduce the magnetizing current to a minimum, thereby increasing the power factor and insuring high efficiency. The temperature rise under continuous full-load operation is very slight, thus allowing a liberal margin for overloads without injury to the windings. These motors will also give from two to three times full load running torque without stopping or "pulling out."

As a result of the installation of our Central Station Service in buildings which formerly operated their own plants, we find it necessary to market large quantities of

ELECTRIC SECOND-HAND MACHINERY STEAM

These machines are in excellent operating condition and are offered at *very low prices*.
They consist of Motors of various makes, Generators, Direct Connected D. C. Units, Engines, etc.
Prices and all necessary information will be promptly given on request.

CHICAGO EDISON COMPANY

Telephone Main 1280. **Edison Building, 139 Adams Street, CHICAGO**

THE NEW INCANDESCENT LAMP!

WE, too, make incandescent lamps of exceedingly good quality, workmanship beyond criticism, prices below others, quality considered.

We give a life guarantee, a maintenance of candle power guarantee and ship just what our customers call for. No 104-volt lamps for 115-volt circuit, to give momentarily high candle power and short life, in our shipments.

Two factories with sufficient working capital and experienced employees produce one result, namely, good material and satisfied customers. Get busy with us and secure our prices on a barrel of lamps. Shipments same as samples, as we make our own sample lamps, something not always done. With our ELK new lamps and NOVELTY renewed lamps we are in position to supply all classes of trade. Be sure to mail your inquiry to the **NOVELTY INCANDESCENT LAMP COMPANY, Emporium, Pa.,** so that it will reach the proper hands.

ALVIN & JACKSON, WESTERN SALES AGENTS, 502 Monadnock Block, Chicago, Ill.

An Elevator Controller For Every Service

High or Low Speed, Alternating or Direct Current, Passenger or Freight Elevators

Can you imagine a more compact and rugged controller than the one shown below? Note the rigid steel frame which supports the reversing switch and contactor elements and surrounds and protects the resistance grids.
Strength and simplicity are denoted in every line of the construction.
Bulletins descriptive of our new line of elevator controllers will be sent on application.

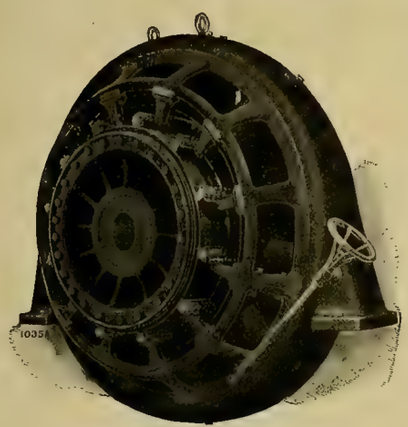
Lighting—Power and Railway Service



300 Kw. Engine Type Generator

Large Overload Capacity
High Efficiencies
Modern Design

National Brake & Electric Co.
Milwaukee, U. S. A.
GENERAL SALES OFFICE: 519 FIRST NATIONAL BANK BLDG., CHICAGO

Temperature Coefficient: NIL

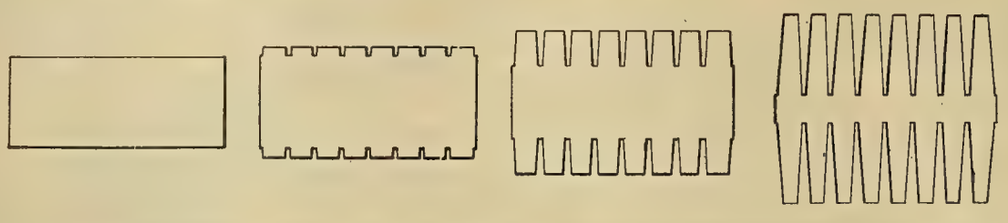
"ADVANCE" Resistance Wire

Absolutely no corrosion under any conditions

Especially recommended for measuring instruments and apparatus in which the wire is repeatedly heated and cooled.

Furnished also in Ribbon and Sheet

DRIVER-HARRIS WIRE CO.
Harrison, New Jersey



The Large Contact Surface

The Large Contact Surface of the Gould Battery plate is secured by our patented process of "spinning." The diagrams show the development of a large contact surface for active material out of a "blank" of sheet lead, without the removal or addition of any metal. It will pay you to investigate the Gould Integral Plate before buying a battery.

Write for our bulletins and a copy of our booklet "Facts."

Electric Time Stamps

are far superior to all others. They are neat, handy, do not get out of order and never make mistakes. Stamps date to the minute on your mail, orders and business transactions. Your desk and your business establishment are incomplete without one. Any number can be operated by our electric clock, either with lighting circuit or dry batteries. There is no other time stamp "just as good." Electric Time Stamps are in a class by themselves. Send for illustrated catalogue. Would like to hear from dealers.

Get the Edison Ready-to-Use Electric Decorative Lighting Outfits

NOW

and take advantage of the holiday season

The Edison outfits provide the safest means for the illumination of all kinds of decorations. They are in demand at all seasons for the adornment of the home or for use on a larger scale at public gatherings.

The outfit is simple, flexible, thoroughly constructed, perfectly safe and forms a most serviceable decoration which should be in every electrically lighted home.

These outfits are supplied with 8, 16, 24 and 32 lamps neatly packed in an attractively decorated wooden box. Each lamp gives two candle power and each series of eight lamps takes only one-third of an ampere. These outfits are supplied for any commercial voltage. The junction plug is so constructed that extra festoons can be connected and various decorative effects obtained. Lamps are plain and colored. Each outfit includes extra lamps.

The Edison outfit is approved for Christmas Trees by the National Board of Fire Underwriters.

THE "BABY" TORCH

Burns Without Air Pressure

THE "Baby" Gasoline Torch is the smallest torch made which gives perfect results, and fills the long-felt want for a torch which fits the hand and can be used in contracted places and corners. It can be turned in any position, as it burns equally well in all positions. It is perfectly automatic; has no cocks or valves to get out of order; lights with a match; self-feeding; requires no pumping of air and is always ready for use. It is indispensable to the Telephone and Telegraph linemen and ELECTRICIANS. It burns about two hours from one filling.

Electrician Pub. Co., 507 Marquette Bldg., Chicago

DEPARTMENT OF THE INTERIOR, Office of Superintendent U. S. Capitol Building and Grounds, Washington, D. C., November 21, 1906. Pursuant to the directions of the Commission of the House of Representatives, etc., advertisement is hereby made for sealed proposals (in duplicate) for the furnishing and erection of apparatus to completely equip the heating, lighting and power plant for the Capitol building and other buildings, which apparatus will consist of engines, generators, switchboards, boilers, pumps, condensers, steam fitting and all other necessary appliances to connect the same in the several parts, and for complete sub-station apparatus for the various buildings. Proposals for the first section of the work, that is, for prime movers and generators and sub-station apparatus and complete switchboard equipment therefor, will be received and opened at the above office on Wednesday, the 26th day of December, 1906, at twelve o'clock noon, and publicly opened. Subsequent proposals will be received for the other apparatus, and the date of opening will be stated in the specifications. Applications for plans and specifications may be made at once, and the issuance will be in the discretion of the Superintendent. Bidders will be required in the first instance to furnish with their proposal a certified check or surety bond in the sum of five per cent of the amount of their bid. A certified check in the sum of $50.00 will be required as a guarantee for the return of plans and specifications. The right is reserved to reject any or all bids, and to waive technicalities and informalities. Elliott Woods, Superintendent U. S. Capitol Building and Grounds. Approved: E. A. HITCHCOCK, Secretary.

Dynamos, Armatures, Motors, Arc Lamps, Fans, Instruments.

Wagner Electric Mfg. Company

ST. LOUIS, U. S. A.

Combination Volt Wattmeter

For testing lamps, motors and other devices consuming a small amount of current.

This instrument will operate on 150-volt or 300-volt circuits, either alternating or direct. It does not have to be sent in for recalibration every sixty or ninety days, as is the case with other lamp-testing volt wattmeters.

This instrument operates on the moving coil dynamometer principle, and not on the balanced coil dynamometer principle, which latter type requires constant balancing and compensation in order to make the zeros coincide, and makes it impossible to take readings on a fluctuating load. Our instrument is light in weight, compact and neat in appearance, not easily deranged or put out of order, maintains its calibration for a long period of time, and owing to its adaptability to 300-volt circuits, the constant dread of a burn-out when used inadvertently on 250-volt circuits is removed.

This instrument is so simple in construction that it can be sold for almost half the price of a balanced coil dynamometer instrument of the old type. These instruments are put out under our full guarantee, which is practically an insurance policy in your favor, guaranteeing their good behavior.

THE SHELBY WAY

IS THE WAY TO MORE REVENUE

To all lamp users who have been using lamps that consume 56 watts, we offer this 45-watt lamp and guarantee it to give equal illumination, and, furthermore—to produce it in useful directions.

Why should you pay for more current than you need to produce a given illumination?

Let us send you a few testimonials from prominent engineers as to the comparative values of the different lamps.

HARTFORD STEAM BOILER
INSPECTION & INSURANCE COMPANY

39th ANNUAL STATEMENT

JANUARY 1, 1906

CAPITAL	$ 500,000.00
SURPLUS	1,261,459.69
RESERVES	1,926,686.81
ASSETS	3,688,146.50

The **Hartford** is the only company which makes a specialty of, and does exclusively, a steam boiler inspection and insurance business.

The **Hartford** is the only company whose entire talent and energies are applied to the study of steam, to the scientific construction and installation of boilers, and to their periodical inspection by expert mechanics.

The **Hartford** is the only company whose entire assets and resources are held exclusively for the protection of steam users, and the payment of losses occasioned by the explosion of steam boilers, and for no other hazard whatsoever.

The **Hartford** is now doing nearly nine-tenths of the Inspection and Insurance of Steam Boilers in the New England States, and nearly two-thirds of the entire amount done throughout the United States.

YOU WOULDN'T START A HORSE CAR LINE

in this age of electric cars? Not if you wanted to make money out of the business of transportation.

Then why should you start a manual telephone exchange in this age of automatics, if you want to make money out of the telephone business?

The automatic system of telephony bears the same relation to the manual system that the electric car does to the horse car. It is the apotheosis of telephone development, as the electric car is of transportation development.

The automatic telephone system produces the best service more economically than indifferent service can be produced with manual equipment.

There is no more question as to the relative popularity of the automatic and manual telephone service where the two kinds are in competition than there is as to the relative popularity of the trolley car and the horse car.

And, as for the securities—the same comparison may be applied with the same results.

Our automatic system has been adopted in the following cities:

Aberdeen, S. D.
Akron, Ohio.
Albuquerque, N. M.
Allentown, Pa.
Auburn, Me.

A SMALL COMMON BATTERY SWITCHBOARD IS A GOOD PAYING INVESTMENT

One of these cabinets received an award at the Pan-American Exposition. This cabinet will go well with the finest office furniture. It has front and rear panels made removable so that all apparatus is easily accessible for making connections.

We make a large variety of these small switchboards for use in Factories, Department stores, Hotels, Apartment buildings, Hospitals, Railroad offices, and all similar places where good service is required.

Our "Bulletin No. 11-F" gives a complete description of all our cabinets of this class.

Do not delay. Write today for our bulletins and estimates.

"TELEPHONE TROUBLES
...AND...
HOW TO FIND THEM,"

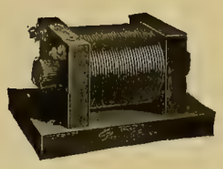
BY
W. H. HYDE AND J. A. McMANMAN,
FORMERLY
HASKINS' TELEPHONE TROUBLES.

This Little Book is Strictly Up-To-Date on all Matters Pertaining to Telephone Troubles and their Remedies.

Sent Postpaid for 25c.

New (eighth) edition just out, 48 pages. Many diagrams showing connections. A complete hand-book for telephone inspectors.
Telephone exchange managers and employes will find this book a great help in locating telephone troubles and remedies therefor.

Electrician Publishing Co.,
507 MARQUETTE BLDG., CHICAGO.



Whatever the use to which a battery is put, the purchaser wants strong, constant, uniform electrical energy at the lowest possible cost.

The cheapest form of battery to buy is the "dry" cell. The cheapest form to use is the Edison Primary Battery. A 25-cent dry battery will, if fresh, deliver 20 ampere-hours before it is played out. An Edison renewal delivers 150 ampere-hours and costs 82 cents.

When a "dry" cell battery is exhausted, new batteries must be bought, whereas the Edison can be renewed indefinitely.

The Edison is not only cheaper than all other forms of battery energy but also more reliable, furnishing at all times any current desired.

Write for Descriptive Literature.

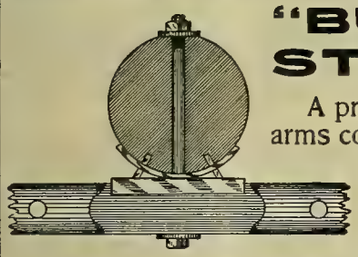
"BULL DOG" STEEL GAIN



A pressed steel support for cross arms consisting of two plates, one engaging the arm and the other the pole. It provides a means of mounting arms without cutting gains. It strengthens the arm and pole. It facilitates the placing and alignment of cross arms. It saves braces on four and six pin arms. It can be purchased at a cost slightly exceeding the cost of cutting a gain. It is made for telephone and standard arms and will fit any pole.

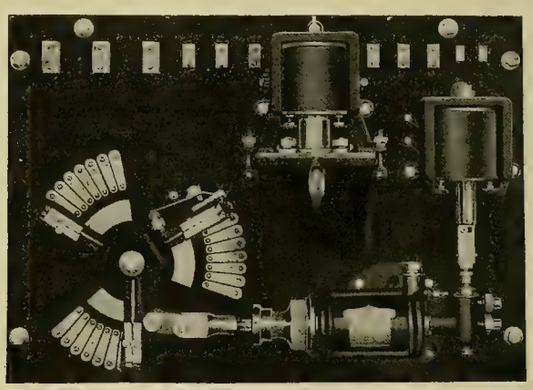
NEW YORK: E. E. Cary Co., 59 Park Place
CHICAGO: A. J. Cox & Co., Stock Exchange Building

Problems in Alternating Current Control

are made simple by the use of C. & H. Self Starters, which are built for single, two or three phase motors.

The accompanying illustration shows a Starter for a squirrel-cage type Alternating Current Motor.



These Starters are built to be operated by either a float switch or pressure regulator when used in conjunction with pump motors.

Bulletin 33 Starters are designed for small A. C. motors which can be thrown directly across the line. They consist simply of a solenoid-operated oil switch suitably mounted and controlled by a snap switch, or automatically by a float switch or pressure regulator.

Bulletin 34 and 35 Starters are for squirrel-cage or slip-ring type motors respectively, the rheostat lever being moved automatically by air or hydraulic pressure.

P and S Sockets break the current in two parts of the circuit simultaneously. P and S Sockets, therefore, reduce one-half the energy of the arc.

This saves wear and tear.

That's one of the reasons why P and S *endure* while others expire.

Catch the idea?

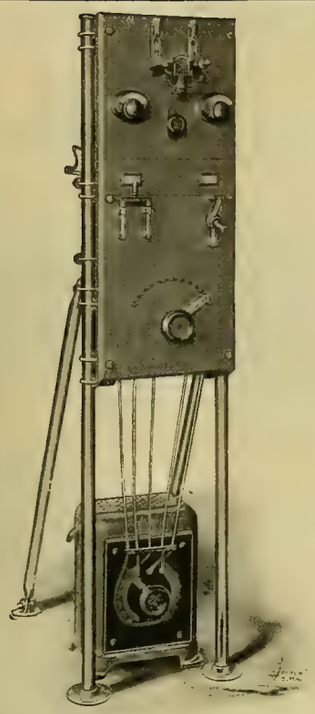
General Electric Company



Mercury Arc Rectifier Panels for Charging Batteries

More efficient—Lower operating cost—Simpler in operation—Occupy less floor space—In every way preferable to any other charging outfit

These panels are so designed that starting resistance is automatically cut out when starting switch is released.

Tube is protected by its location back of panel.

All large permanent adjustments are made by compensator steps.

Fine current adjustment throughout all parts of charge without affecting efficiency is made possible by use of regulating reactance.

The necessary amount of reactance used in the circuit is small and has no appreciable effect on the power factor of the circuit.

The addition of these panels to the alternating current circuits of a central station means an inc ease in desirable load, as batteries require many hours for charging. The General Electric Company has developed rectifier outfits for many classes of service, which are in daily use charging automobile power and sparking batteries, telephone, telegraph and surgical batteries, and in other ways furnishing direct current from alternating current circuits.

Anchors that hold

Showing the 5, 6 and 7 in. style.

Holds 12,500, 15,000 and 17,500 lbs. respectively.

Popular with Street Railway, Electric Light and Telephone Companies.

The 5, 6 and 7 inch
Stombaugh Guy Anchors
HAVE NO WELDS

The full rod is cast into the helix. Our experience has shown that welds are dangerous in rods of less than one inch in diameter.
The rods of Stombaugh Guy Anchors are not weakened by holes for pins or rivets.

STOMBAUGH GUY ANCHORS BORE INTO THE GROUND WITHOUT DISTURBING THE SOLID EARTH.

When in at the proper depth they are set. The strain can then be put on without fear of any back give. You are sure. An anchor is as strong as its weakest part. Stombaugh Guy Anchors have no weak parts.

Chicago Office: 167 S. Canal St. UTICA, N. Y.

THE NEW INCANDESCENT LAMP!

We offer you a strictly first class lamp at a reasonable price — **and that price is less than the "association price."**

It is "up to you," Mr. Lamp Buyer.

Ours is a New Lamp, but we know the business. Give us a trial and we will prove our proposition so you will stay with us.

As we mean business and want your trade, we urge you to "look us up," to investigate us fully, financially and otherwise, and we, therefore, refer you to the First National Bank of Emporium, Pa., and the Farmers & Merchants Bank of St. Marys, Pa.

DISSECTING A BATTERY

SERVICE is what is wanted in a Battery and the *best* service is *always* given by the

ROCK ISLAND
NEW PATENT
DRY CELLS

Made of the right material by experts and subjected to thoro tests, every Rock Island CELL that leaves our factory is really given a certificate of character, for our trademark is as good as a warranty deed for dependability.

In our laboratory the limits of perfection in careful manufacture have been reached. ROCK ISLAND DRY CELLS have proved in exhaustive tests to RANK FIRST IN STRENGTH AND DURABILITY.

The *heart* of the Rock Island is sound, and not only long life but constant tension is assured by its use.

Our standard No. 8 for all high class work—gasoline and gas engines, and telephone exchanges—has given eminent satisfaction. Standard No. 6 is the battery for general purposes. No. 8 costs more, but is really cheaper because it lasts longer.

Department A will be glad to rush you a sample barrel. Write for prices.

WHY PAY SO MUCH FOR LIGHTING CURRENT?

DO YOU KNOW you are paying much more for lighting current these dark winter days than it would cost you to make twice the current you use?

The best way for us to prove this is to ask you to install a Northern Generator and see for yourself. Drive it by either gas, gasoline, kerosene, alcohol or steam engine. For internal combustion engine drive we build dynamos with flywheels giving good steady light and power no matter how unsteady the engine runs.

Our Bulletin No. 2550 illustrates and describes economical lighting equipments.

DEPARTMENT OF THE INTERIOR, Office of Superintendent U. S. Capitol Building and Grounds, Washington, D. C., November 21, 1906. Pursuant to the directions of the Commission of the House of Representatives, etc., advertisement is hereby made for sealed proposals (in duplicate) for the furnishing and erection of apparatus to completely equip the heating, lighting and power plant for the Capitol building and other buildings, which apparatus will consist of engines, generators, switchboards, boilers, pumps, condensers, steam fitting and all other necessary appliances to connect the same in the several parts, and for complete sub-station apparatus for the various buildings. Proposals for the first section of the work, that is, for prime movers and generators and sub-station apparatus and complete switchboard equipment therefor, will be received and opened at the above office on Wednesday, the 26th day of December, 1906, at twelve o'clock noon, and publicly opened. Subsequent proposals will be received for the other apparatus, and the date of opening will be stated in the specifications. Applications for plans and specifications may be made at once, and the issuance will be in the discretion of the Superintendent. Bidders will be required in the first instance to furnish with their proposal a certified check or surety bond in the sum of five per cent of the amount of their bid. A certified check in the sum of $50.00 will be required as a guarantee for the return of plans and specifications. The right is reserved to reject any or all bids, and to waive technicalities and informalities. Elliott Woods, Superintendent U. S. Capitol Building and Grounds. Approved: E. A. HITCHCOCK, Secretary.

The difference between dry cell batteries and **Edison Primary Batteries** is the difference between chance and certainty. The first thing to know of a battery is what to expect of it. With a dry cell there is no knowing. With the Edison you know exactly. The Edison is not only the most trustworthy of all batteries but delivers the greatest amount of energy for the least cost.

Tell us for what use you wish electrical energy and we will tell you which Edison battery you need, how many and the cost.

OTTO ENGINES

Unsolicited Praise

OTTO OTTO

Farrand Bros., proprietors of the Lakeside Stock Farm, Colon, Michigan, write: "Our engine has run nine years without trouble, but all machinery is bound to wear out." They then ask for platinum with which to tip the electrodes,—a trifling and inexpensive repair. *Nine years* and just beginning to need attention. The average life of the *cheaper* makes is about *five* years. There is a moral in this for the prospective buyer,—Get the **"Otto"** for long life, and no trouble.

YOU WOULDN'T START A HORSE CAR LINE

in this age of electric cars? Not if you wanted to make money out of the business of transportation.

Then why should you start a manual telephone exchange in this age of automatics, if you want to make money out of the telephone business?

The automatic system of telephony bears the same relation to the manual system that the electric car does to the horse car. It is the apotheosis of telephone development, as the electric car is of transportation development.

The automatic telephone system produces the best service more economically than indifferent service can be produced with manual equipment.

There is no more question as to the relative popularity of the automatic and manual telephone service where the two kinds are in competition than there is as to the relative popularity of the trolley car and the horse car.

And, as for the securities—the same comparison may be applied with the same results.

Our automatic system has been adopted in the following cities:

Aberdeen, S. D.
Akron, Ohio.

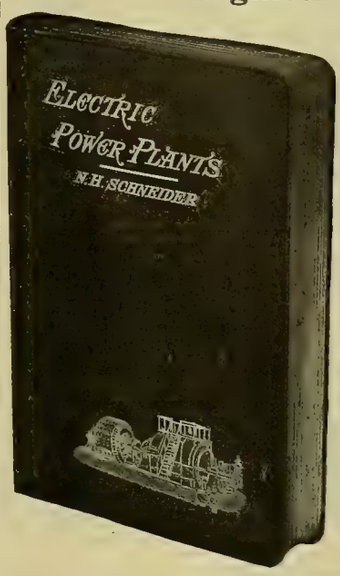
The Care and Management of

Electric Power Plants

By NORMAN H. SCHNEIDER

Here is a Book Every Steam and Electrical Engineer Should Have



Because it deals practically with the care and management of power plants; direct and alternating current motors have been given a special chapter and modern forms of starting rheostats are described at length.

There are special chapters on the electrical current, standard wiring with formulas and tables, etc., direct and alternating current dynamos, motors and motor starters, testing electric lamps and dynamos and measuring instruments, storage batteries, engineering notes, belts, pulleys, horsepower, etc.

Westinghouse

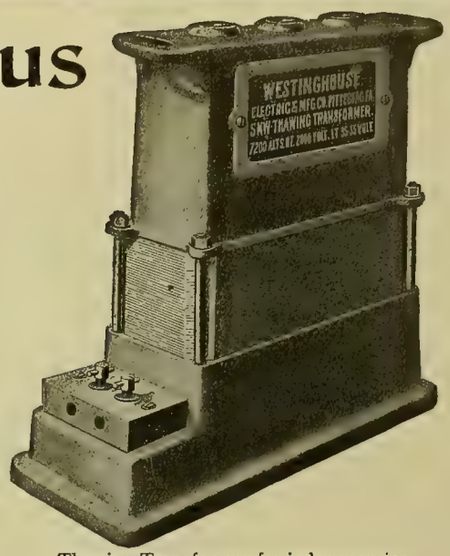
Pipe Thawing Apparatus

The Time to Buy is Now

Choke Coil used in connection with a standard transformer for outdoor service

Do not wait for the first blizzard to freeze things up

We manufacture two outfits, one for heavy service, comprising a specially designed choke coil, used in connection with the primaries of a standard transformer, and one for lighter service, a transformer adapted for suitable secondary voltage adjustments, and intended to be used directly on the primary mains. Both outfits are light in weight, and easy and safe to handle.



Thawing Transformer for indoor service

Burns Without Air Pressure
THE "BABY" TORCH
THE "Baby" Gasoline Torch is the smallest torch made which gives perfect results, and fills the long-felt want for a torch which fits the hand and can be used in contracted places and corners. It can be turned in any position, as it burns equally well in all positions. It is perfectly automatic; has no cocks or valves to get out of order; lights with a match; self-feeding; requires no pumping of air and is always ready for use. It is indispensable to the Telephone and Telegraph linemen and ELECTRICIANS. It burns about two hours from one filling.

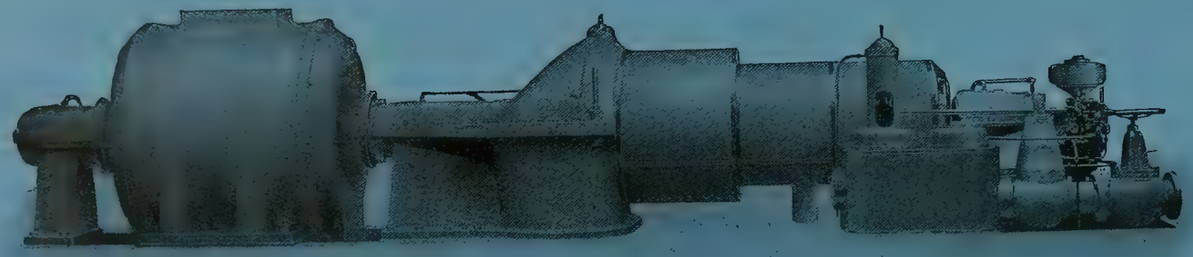
MILWAUKEE WIS U S A

5,500 K. W. Allis-Chalmers Steam Turbine and Generator Installed.

ALLIS-CHALMERS STEAM TURBINES AND GENERATORS

Are demonstrating in daily service that they have no equal on this continent



1,500 K. W. Allis-Chalmers Steam Turbine and Generator.

AMONG OTHER PURCHASERS OF OUR STEAM TURBINES AND GENERATORS, ONE PROMINENT CONSULTING ENGINEER, alone, viz.: Mr. Thos. E. Murray, of New York City, HAS RECENTLY PLACED THE NINTH SUCCESSIVE ORDER FOR A COMPLETE UNIT. THE LIST OF INSTALLATIONS ALREADY MADE AND TO BE MADE FOR HIS CLIENTS IS AS FOLLOWS:

Brooklyn Rapid Transit Co., Brooklyn, N. Y.	5,500 K. W.	Edison Electric Illuminating Co., Brooklyn, N. Y.	5,500 K. W.
Kings County Electric Light & Power Co., Brooklyn, N. Y.	6,000 K. W.	Utica Gas & Electric Co., Utica, N. Y.	1,500 K. W.
New York Edison Co., Bronx Station,	1,500 K. W.	Westchester Lighting Co., New Rochelle, N. Y.	1,500 K. W.
Helderberg Cement Co., Howe's Cave, N. Y.	1,500 K. W.	Memphis Consolidated Lighting Co., Memphis, Tenn.	1,500 K. W.
Dayton Lighting Co., Dayton, O.	1,500 K. W.	TOTAL,	26,000 K. W.

Other large orders, placed directly with Allis-Chalmers Co. by the owners of Electric Railway, Power and Lighting Stations in various parts of the country, are also being received in sufficient volume to indicate a large demand for this improved type of turbine.

SPECIAL FEATURES OF OUR UNITS ARE:

Channel shaped shroud rings (patented, and controlled by us exclusively in America) riveted to the ends of the blades, giving great stiffness, permitting running with absolute minimum of clearance, and eliminating all danger of stripping. * * Accurate spacing and entirely secure fastening of the blading. . . . Balance pistons of special design, small in diameter, which prevent distortion of the cylinders under varying temperatures. * * Revolving parts designed for high peripheral speeds. * * Ample provision made for ventilation. * * Perfect balance of the rotating parts, both of the turbine and the generator, resulting in a minimum of vibration, quiet operation of the generator and remarkable coolness of the bearings, which are continuously and automatically lubricated. * * High steam economy, even at rapidly fluctuating loads. * * Expansion complete. Adapted to high steam pressures and superheat. * * Water of condensation entirely free from oil. * * Large overload capacity. * * Small space required for installation as compared with the output * * Simplicity of design throughout and ease of operation. No appreciable deterioration under long and severe service.

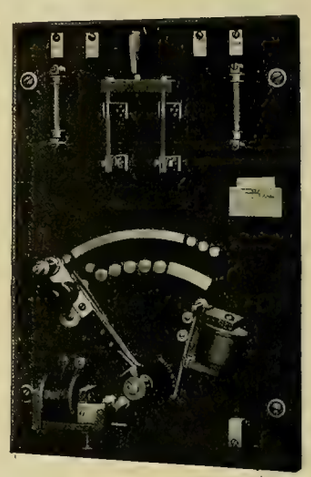
ABSOLUTE PROTECTION FOR YOUR MOTOR

Simple Armature and Field Regulator Combined in One Compact Piece of Apparatus. Gives wide range of motor speeds.

Includes Overload and No-Voltage Release, Knife Switch and Fuses



External Resistance Inserted in the Armature Circuit for Slow Speeds, and in the Field Circuit for High Speeds

By combining Armature and Field Regulation, a manifest saving is accomplished, the apparatus becomes more compact and the operator must, of necessity, start the motor under full field.

Described in bulletins 44, 44½ and 45.

"Active material not in electrical contact with the grid is absolutely inert." In the Gould Plate it is quite impossible for any active material contained in the grooves not to be in good mechanical or electrical contact with the support plate. The Gould Plate, in process of manufacture, is given a closely ribbed surface, and in the grooves the active material is formed electrochemically as shown in the diagram. The structure of these elements is highly porous, though densely packed in spaces so narrow as to render mechanical dislodgment nearly impossible. By the very nature of this construction all active material in grooves is maintained in close electrical contact with the support plate. It will pay you to send for the Gould literature.

NOTICE

THE PATENTED DEVICE which has brought the ELECTRO-DYNAMIC COMPANY'S INTER-POLE VARIABLE SPEED MOTOR to its present state of high efficiency is owned by the

ELECTRO-DYNAMIC COMPANY

Unlicensed Manufacturers are now making and offering for sale Variable Speed Motors embodying this device, and variously termed "Auxiliary Pole," "Commutating Pole," etc., etc., which INFRINGE the patent No. 775,310, dated November 22, 1904, owned by the ELECTRO-DYNAMIC COMPANY.

NOTICE IS HEREBY GIVEN

that such INFRINGERS, including users of such infringing apparatus, render themselves liable for damages, and will be prosecuted forthwith.

Pursuant to the above notice, suit has been begun on November 23, 1906, by the filing of a bill of complaint against The Westinghouse Electric and Manufacturing Company.

General Electric Company

Mercury Arc Rectifier Panels for Charging Batteries

More efficient—Lower operating cost—Simpler in operation—Occupy less floor space—In every way preferable to any other charging outfit

These panels are so designed that starting resistance is automatically cut out when starting switch is released.

Tube is protected by its location back of panel.

All large permanent adjustments are made by compensator steps.

Fine current adjustment throughout all parts of charge without affecting efficiency is made possible by use of regulating reactance.

The necessary amount of reactance used in the circuit is small and has no appreciable effect on the power factor of the circuit.

The addition of these panels to the alternating current circuits of a central station means an increase in desirable load, as batteries require many hours for charging. The General Electric Company has developed rectifier outfits for many classes of service, which are in daily use charging automobile power and sparking batteries, telephone, telegraph and surgical batteries, and in other ways furnishing direct current from alternating current circuits.

There's No Friction

with the Fibre-Graphite Commutator Brush. Being 90 per cent. pure graphite, it insures low resistance, no sparking under a varying load, and longer wear. There is no greasing required. The Fibre-Graphite is therefore the most economic brush on the market. Send for price list.

HOLMES FIBRE-GRAPHITE MFG. CO.
3155 Wakefield Street, Germantown, PHILADELPHIA.

The difference between dry cell batteries and **Edison Primary Batteries** is the difference between chance and certainty. The first thing to know of a battery is what to expect of it. With a dry cell there is no knowing. With the Edison you know exactly. The Edison is not only the most trustworthy of all batteries but delivers the greatest amount of energy for the least cost.

Tell us for what use you wish electrical energy and we will tell you which Edison battery you need, how many and the cost.

WHY PAY SO MUCH FOR LIGHTING CURRENT?

DO YOU KNOW you are paying much more for lighting current these dark winter days than it would cost you to make twice the current you use?

The best way for us to prove this is to ask you to install a Northern Generator and see for yourself. Drive it by either gas, gasoline, kerosene, alcohol or steam engine. For internal combustion engine drive we build dynamos with flywheels giving good steady light and power no matter how unsteady the engine runs.

Our Bulletin No. 2550 illustrates and describes economical lighting equipments.

DEPARTMENT OF THE INTERIOR, Office of Superintendent U. S. Capitol Building and Grounds, Washington, D. C., November 21, 1906. Pursuant to the directions of the Commission of the House of Representatives, etc., advertisement is hereby made for sealed proposals (in duplicate) for the furnishing and erection of apparatus to completely equip the heating, lighting and power plant for the Capitol building and other buildings, which apparatus will consist of engines, generators, switchboards, boilers, pumps, condensers, steam fitting and all other necessary appliances to connect the same in the several parts, and for complete sub-station apparatus for the various buildings. Proposals for the first section of the work, that is, for prime movers and generators and sub-station apparatus and complete switchboard equipment therefor, will be received and opened at the above office on Wednesday, the 26th day of December, 1906, at twelve o'clock noon, and publicly opened. Subsequent proposals will be received for the other apparatus, and the date of opening will be stated in the specifications. Applications for plans and specifications may be made at once, and the issuance will be in the discretion of the Superintendent. Bidders will be required in the first instance to furnish with their proposal a certified check or surety bond in the sum of five per cent of the amount of their bid. A certified check in the sum of $50.00 will be required as a guarantee for the return of plans and specifications. The right is reserved to reject any or all bids, and to waive technicalities and informalities. Elliott Woods, Superintendent U. S. Capitol Building and Grounds. Approved: E. A. HITCHCOCK, Secretary.

THE NEW Incandescent LAMP

WE, too, make incandescent lamps of exceedingly good quality, workmanship beyond criticism, prices below others, quality considered.

We give a life guarantee, a maintenance of candle power guarantee, and ship just what our customers call for. No 104-volt lamps for 115-volt circuit, to give momentarily high candle power and short life, in our shipments.

Two factories with sufficient working capital and experienced employees produce one result, namely, good material and satisfied customers. Get busy with us and secure our prices on a barrel of lamps. Shipments same as samples, as we make our own sample lamps, something not always done. With our Elk new lamps and Novelty renewed lamps, we are in position to supply all classes of trade. Be sure to mail your inquiry to the

IT'S TIME

To forward order and copy for a special announcement in the WESTERN ELECTRICIAN'S Annual New Years Number. It will be one of the grandest publications ever placed before the electrical trade, and you really can't afford to remain out of it.
All buyers of electrical goods will find something of interest and value in this number. If your product is carefully and attractively placed before them in the advertising columns of this issue—we'll all be pleased. Better let us know your wishes TODAY. There are still some choice locations open.

WESTERN ELECTRICIAN
507 MARQUETTE BUILDING
CHICAGO

YOU WOULDN'T START A HORSE CAR LINE

in this age of electric cars? Not if you wanted to make money out of the business of transportation.

Then why should you start a manual telephone exchange in this age of automatics, if you want to make money out of the telephone business?

The automatic system of telephony bears the same relation to the manual system that the electric car does to the horse car. It is the apotheosis of telephone development, as the electric car is of transportation development.

The automatic telephone system produces the best service more economically than indifferent service can be produced with manual equipment.

There is no more question as to the relative popularity of the automatic and manual telephone service where the two kinds are in competition than there is as to the relative popularity of the trolley car and the horse car.

And, as for the securities—the same comparison may be applied with the same results.

Our automatic system has been adopted in the following cities:

Aberdeen, S. D.
Akron, Ohio.
Albuquerque, N. M.
Allentown, Pa.
Auburn, Me.
Auburn, N. Y.

A SMALL COMMON BATTERY SWITCHBOARD IS A GOOD PAYING INVESTMENT

One of these cabinets received an award at the Pan-American Exposition. This cabinet will go well with the finest office furniture. It has front and rear panels made removable so that all apparatus is easily accessible for making connections.

We make a large variety of these small switchboards for use in Factories, Department stores, Hotels, Apartment buildings, Hospitals, Railroad offices, and all similar places where good service is required.

Our "Bulletin No. 11-F" gives a complete description of all our cabinets of this class.

Do not delay. Write today for our bulletins and estimates.

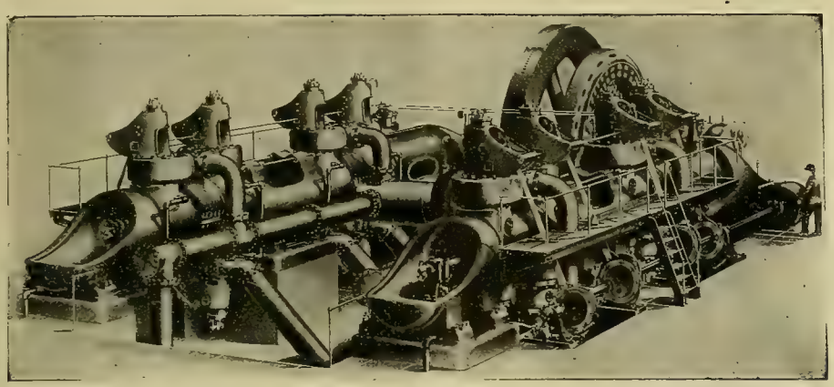
Westinghouse

Single and Double Acting Gas Engines



3,000 H. P. Westinghouse, Twin Tandem, Double-Acting Gas Engine-Generating Unit.

The Success in Operation

of Westinghouse heavy duty gas engines is in no small measure due to the oiling system. A continuous circulating and filtering system is supplied with each engine, resulting in a great saving of oil. Cylinder lubrication is particularly effective owing to the judicious application of lubricant at just the right time, the oil being automatically injected into the cylinder at several points, but only on the inductive stroke, not promiscuously as is the usual method, which results in the carbonization of a greater portion of the oil.

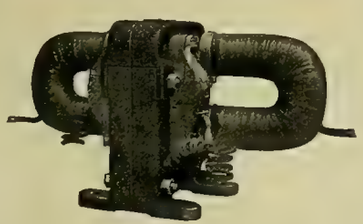
Type B.
For potentials not exceeding 12,000 volts.



Type E.
For potentials not exceeding 24,000 volts.

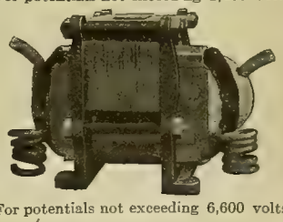
Westinghouse
Switchboard Transformers

Made in seven different types, all designed for five ampere secondary, and ranging from 5 to 3,000 ampere primary current.

Ample insulation and a liberal amount of iron and copper used in their construction insure exceptionally accurate transformation. They are conveniently arranged for connecting to circuit.

For further particulars address nearest office.

Type G.
For potentials not exceeding 2,400 volts.



For potentials not exceeding 6,600 volts

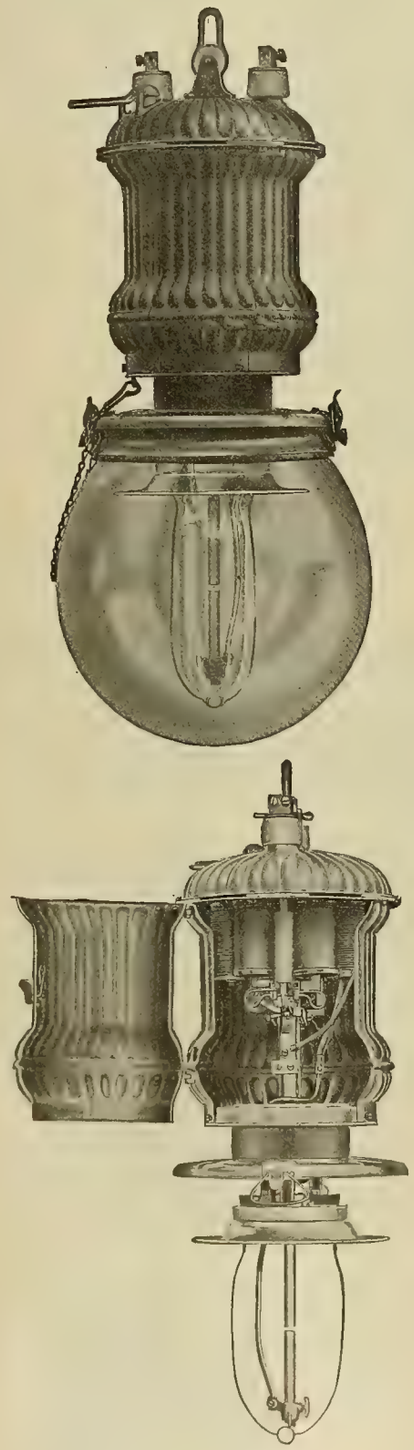
Westinghouse

A. C. Series Arc Lamps



Some Details

Ventilation. The ultimate temperature rise is so low, namely, 45° centigrade, that practically no ventilation is required in the case, making the lamps storm and insect proof.

Insulation. Each lamp is thoroughly insulated between the terminals and frame. The construction is such that insulation is required in only a few places to insulate the controlling and operating mechanism from the housing, practically eliminating the insulation troubles which are so frequent in other lamps.

Alignment. No one part depends upon another for its alignment. A lamp can be taken apart and reassembled by an inexperienced person.

Housing. The housing, which forms the frame, is made from very heavy sheet copper pressed into shape, combining great strength and rigidity with a pleasing ornamental effect. A door is provided for the inspection and adjustment of the mechanism.

Switch. A switch is provided for cutting out the lamp when desired. It is contained in the top of the lamp housing and has no movable leads or other connections to become grounded or broken.

Binding Posts. The binding posts are located on the top of the lamp in square receptacles to prevent turning. They are insulated from the housing by large porcelain pieces similar to petticoat insulators, insuring the least possible trouble from leakage and breakage.

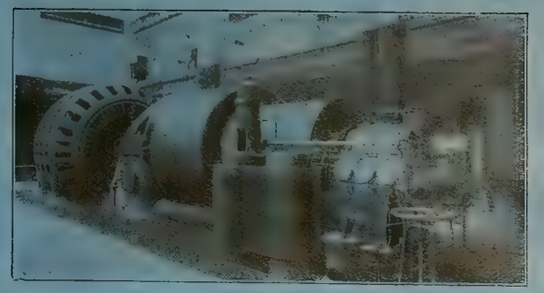
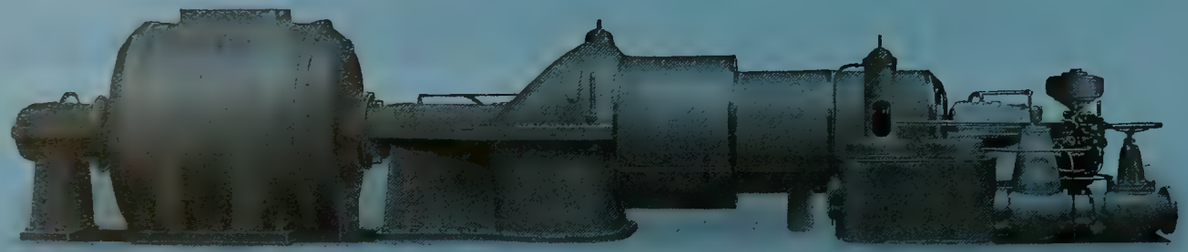
MILWAUKEE WIS U S A



5,500 K. W. Allis-Chalmers Steam Turbine and Generator Installed.

ALLIS-CHALMERS STEAM TURBINES AND GENERATORS.

Are demonstrating in daily service that they have no equal on this continent.



1,500 K. W. Allis-Chalmers Steam Turbine and Generator.

AMONG OTHER PURCHASERS OF OUR STEAM TURBINES AND GENERATORS, ONE PROMINENT CONSULTING ENGINEER, alone, viz.: Mr. Thos. E. Murray, of New York City, HAS RECENTLY PLACED THE NINTH SUCCESSIVE ORDER FOR A COMPLETE UNIT. THE LIST OF INSTALLATIONS ALREADY MADE AND TO BE MADE FOR HIS CLIENTS IS AS FOLLOWS:

Brooklyn Rapid Transit Co., Brooklyn, N. Y.	5,500 K. W.
Kings County Electric Light & Power Co., Brooklyn, N. Y.	6,000 K. W.
New York Edison Co., Bronx Station,	1,500 K. W.
Helderberg Cement Co., Howe's Cave, N. Y.	1,500 K. W.
Dayton Lighting Co., Dayton, O.	1,500 K. W.
Edison Electric Illuminating Co., Brooklyn, N. Y.	5,500 K. W.
Utica Gas & Electric Co., Utica, N. Y.	1,500 K. W.
Westchester Lighting Co., New Rochelle, N. Y.	1,500 K. W.
Memphis Consolidated Lighting Co., Memphis, Tenn.	1,500 K. W.
TOTAL,	26,000 K. W.

Other large orders, placed directly with Allis-Chalmers Co. by the owners of Electric Railway, Power and Lighting Stations in various parts of the country, are also being received in sufficient volume to indicate a large demand for this improved type of turbine.

SPECIAL FEATURES OF OUR UNITS ARE:

Channel shaped shroud rings (patented, and controlled by us exclusively in America) riveted to the ends of the blades, giving great stiffness, permitting running with absolute minimum of clearance, and eliminating all danger of stripping. * * Accurate spacing and entirely secure fastening of the blading. . . . Balance pistons of special design, small in diameter, which prevent distortion of the cylinders under varying temperatures. * * Revolving parts designed for high peripheral speeds. * * Ample provision made for ventilation. * * Perfect balance of the rotating parts, both of the turbine and the generator, resulting in a minimum of vibration, quiet operation of the generator and remarkable coolness of the bearings, which are continuously and automatically lubricated. * * High steam economy, even at rapidly fluctuating loads. * * Expansion complete. Adapted to high steam pressures and superheat. * * Water of condensation entirely free from oil. * * Large overload capacity. * * Small space required for installation as compared with the output * * Simplicity of design throughout and ease of operation. No appreciable deterioration under long and severe service.

Rise of the Rock Island

Just a little over three years ago the first

Rock Island
New Patent
Dry Cell Battery

was put on the market. It won immediate rank as the BATTERY FOR DEPENDABLE SERVICE. Made as carefully as a delicate piece of machinery, Rock Island DRY CELLS have stood exhaustive comparative tests in a distinctively triumphal way that put them in a class exclusively high. That is WHY the Rock Island

Has Won International Fame

Those who KNOW and DEMAND the best find our Standard No. 8 the **right** battery for gas engines, telephone exchanges and high-class work. Costs more than Standard No. 6—the battery for general purposes—but is actually cheaper, because it lasts longer. Write Department A for prices.

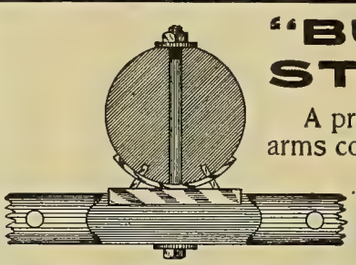
NO WELDS. NO BACK PULL TO SET THEM.



"BULL DOG" STEEL GAIN

A pressed steel support for cross arms consisting of two plates, one engaging the arm and the other the pole. It provides a means of mounting arms without cutting gains. It strengthens the arm and pole. It facilitates the placing and alignment of cross arms. It saves braces on four and six pin arms. It can be purchased at a cost slightly exceeding the cost of cutting a gain. It is made for telephone and standard arms and will fit any pole.

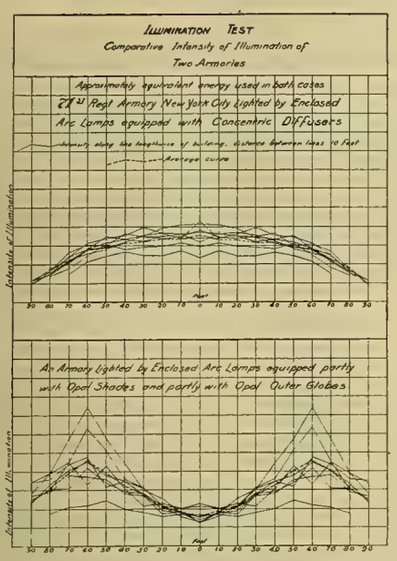
ILLUMINATING ENGINEERING



A COMPARISON

This graphical comparison of curves of illumination intensity shows the results of actual tests made with the candle-foot photometer in two armories differently lighted but using the same energy per square foot of floor area.

The single example shown here is typical of many where the use of the combination of General Electric arc lamps with concentric diffusers has improved the illumination of large and small interiors.

The decision of the engineer who advocates the use of concentric diffusers with enclosed arc lamps is well fortified by such results.

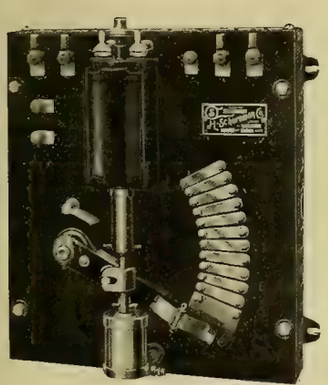
AUTOMATIC PUMP STARTERS



Type "A" Starter

The bottom segment on this starter is made of insulating material. By means of a "lost motion" arrangement in the vacuum dashpot, the contact arm jumps to the first copper segment as soon as the solenoid is energized. As the circuit is thus made and broken positively, no additional solenoid or magnet switch is required. Prices on request.

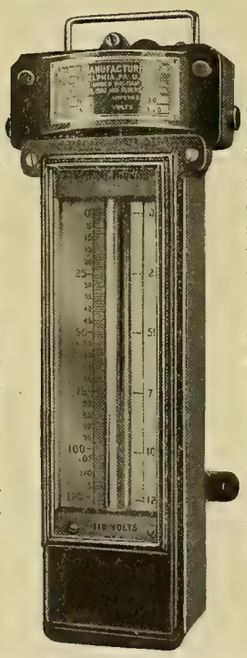
ALVIN & JACKSON, Western Sales Agents, 502 Monadnock Block, Chicago, Ill.

The Bastian Recording Wattmeter

NOW MADE UP TO 20 AMPERES
FOR ALL VOLTAGES, DIRECT CURRENT

READS DIRECT IN K. W. HOURS



The Bastian consists simply of an iron case, a glass tube, two nickel electrodes and a plain scale.

¶ It has nothing to get out of order.

¶ Nature's law of electrolysis guarantees its accuracy and that it will positively register even the smallest current.

¶ It is therefore particularly good for small customers and light loads.

The Bastian is not to be confused with obsolete types based on same electrolytic law, but where a deposit had to be weighed.

¶ It is not damaged by short-circuits, overloads, nor even by lightning.

¶ It is not affected by vibrations, nor subject to outside magnetic influences to slow it down.

¶ It has no mechanisms nor anything to cause trouble or repairs.

DEPARTMENT OF THE INTERIOR, Office of Superintendent U. S. Capitol Building and Grounds, Washington, D. C., November 21, 1906. Pursuant to the directions of the Commission of the House of Representatives, etc., advertisement is hereby made for sealed proposals (in duplicate) for the furnishing and erection of apparatus to completely equip the heating, lighting and power plant for the Capitol building and other buildings, which apparatus will consist of engines, generators, switchboards, boilers, pumps, condensers, steam fitting and all other necessary appliances to connect the same in the several parts, and for complete sub-station apparatus for the various buildings. Proposals for the first section of the work, that is, for prime movers and generators and sub-station apparatus and complete switchboard equipment therefor, will be received and opened at the above office on Wednesday, the 26th day of December, 1906, at twelve o'clock noon, and publicly opened. Subsequent proposals will be received for the other apparatus, and the date of opening will be stated in the specifications. Applications for plans and specifications may be made at once, and the issuance will be in the discretion of the Superintendent. Bidders will be required in the first instance to furnish with their proposal a certified check or surety bond in the sum of five per cent of the amount of their bid. A certified check in the sum of $50.00 will be required as a guarantee for the return of plans and specifications. The right is reserved to reject any or all bids, and to waive technicalities and informalities. Elliott Woods, Superintendent U. S. Capitol Building and Grounds. Approved: E. A. HITCHCOCK, Secretary.

The difference between dry cell batteries and **Edison Primary Batteries** is the difference between chance and certainty. The first thing to know of a battery is what to expect of it. With a dry cell there is no knowing. With the Edison you know exactly. The Edison is not only the most trustworthy of all batteries but delivers the greatest amount of energy for the least cost.

Tell us for what use you wish electrical energy and we will tell you which Edison battery you need, how many and the cost.

OTTO ENGINES

Unsolicited Praise

OTTO

Farrand Bros., proprietors of the Lakeside Stock Farm, Colon, Michigan, write: "Our engine has run nine years without trouble, but all machinery is bound to wear out." They then ask for platinum with which to tip the electrodes,—a trifling and inexpensive repair. *Nine years* and just beginning to need attention. The average life of the *cheaper* makes is about *five* years. There is a moral in this for the prospective buyer,—Get the "**Otto**" for long life, and no trouble.

LICENSEES OF THE YARLEY DUPLEX MAGNET CO

YOU WOULDN'T START A HORSE CAR LINE

in this age of electric cars? Not if you wanted to make money out of the business of transportation.

Then why should you start a manual telephone exchange in this age of automatics, if you want to make money out of the telephone business?

The automatic system of telephony bears the same relation to the manual system that the electric car does to the horse car. It is the apotheosis of telephone development, as the electric car is of transportation development.

The automatic telephone system produces the best service more economically than indifferent service can be produced with manual equipment.

There is no more question as to the relative popularity of the automatic and manual telephone service where the two kinds are in competition than there is as to the relative popularity of the trolley car and the horse car.

And, as for the securities—the same comparison may be applied with the same results.

Our automatic system has been adopted in the following cities:

Aberdeen, S. D.
Akron, Ohio.
Albuquerque, N. M.
Allentown, Pa.
Auburn, Me.

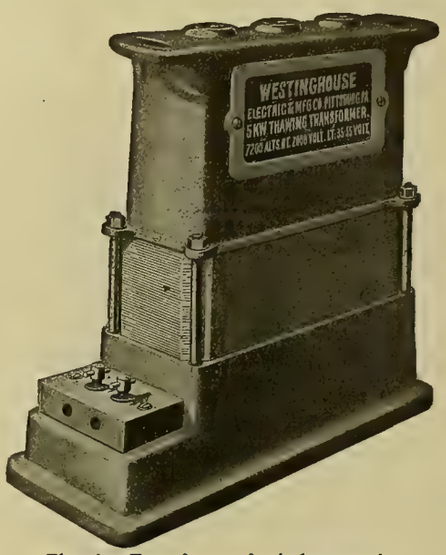
Choke Coil used in connection with a standard transformer for outdoor service

We manufacture two outfits, one for heavy service, comprising a specially designed choke coil, used in connection with the primaries of a standard transformer, and one for lighter service, a transformer adapted for suitable secondary voltage adjustments, and intended to be used directly on the primary mains. Both outfits are light in weight, and easy and safe to handle.



Thawing Transformer for indoor service

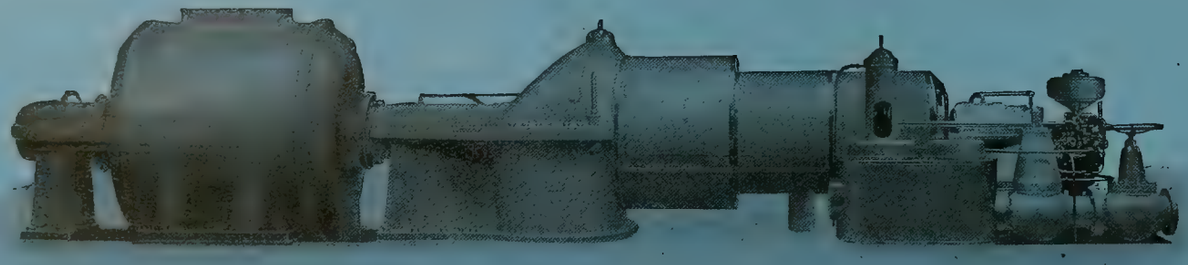
ALLIS-CHALMERS CO
MILWAUKEE WIS U S A

5,500 K. W. Allis-Chalmers Steam Turbine and Generator Installed.

ALLIS-CHALMERS STEAM TURBINES AND GENERATORS.

Are demonstrating in daily service that they have no equal on this continent.



1,500 K. W. Allis-Chalmers Steam Turbine and Generator.

AMONG OTHER PURCHASERS OF OUR STEAM TURBINES AND GENERATORS, ONE PROMINENT CONSULTING ENGINEER, alone, viz.: Mr. Thos. E. Murray, of New York City, HAS RECENTLY PLACED THE NINTH SUCCESSIVE ORDER FOR A COMPLETE UNIT. THE LIST OF INSTALLATIONS ALREADY MADE AND TO BE MADE FOR HIS CLIENTS IS AS FOLLOWS:

Brooklyn Rapid Transit Co., Brooklyn, N. Y.	5,500 K. W.	Edison Electric Illuminating Co., Brooklyn, N. Y.	5,500 K. W.
Kings County Electric Light & Power Co., Brooklyn, N. Y.	6,000 K. W.	Utica Gas & Electric Co., Utica, N. Y.	1,500 K. W.
New York Edison Co., Bronx Station,	1,500 K. W.	Westchester Lighting Co., New Rochelle, N. Y.	1,500 K. W.
Helderberg Cement Co., Howe's Cave, N. Y.	1,500 K. W.	Memphis Consolidated Lighting Co., Memphis, Tenn.	1,500 K. W.
Dayton Lighting Co., Dayton, O.	1,500 K. W.	TOTAL,	26,000 K. W.

Other large orders, placed directly with Allis-Chalmers Co. by the owners of Electric Railway, Power and Lighting Stations in various parts of the country, are also being received in sufficient volume to indicate a large demand for this improved type of turbine.

SPECIAL FEATURES OF OUR UNITS ARE:

Channel shaped shroud rings (patented, and controlled by us exclusively in America) riveted to the ends of the blades, giving great stiffness, permitting running with absolute minimum of clearance, and eliminating all danger of stripping. * * Accurate spacing and entirely secure fastening of the blading. . . . Balance pistons of special design, small in diameter, which prevent distortion of the cylinders under varying temperatures. * * Revolving parts designed for high peripheral speeds. * * Ample provision made for ventilation. * * Perfect balance of the rotating parts, both of the turbine and the generator, resulting in a minimum of vibration, quiet operation of the generator and remarkable coolness of the bearings, which are continuously and automatically lubricated. * * High steam economy, even at rapidly fluctuating loads. * * Expansion complete. Adapted to high steam pressures and superheat. * * Water of condensation entirely free from oil. * * Large overload capacity. * * Small space required for installation as compared with the output * * Simplicity of design throughout and ease of operation. No appreciable deterioration under long and severe service.

THE NEW INCANDESCENT LAMP!

WE, too, make incandescent lamps of exceedingly good quality, workmanship beyond criticism, prices below others, quality considered.

We give a life guarantee, a maintenance of candle power guarantee and ship just what our customers call for. No 104-volt lamps for 115-volt circuit, to give momentarily high candle power and short life, in our shipments.

Two factories with sufficient working capital and experienced employees produce one result, namely, good material and satisfied customers. Get busy with us and secure our prices on a barrel of lamps. Shipments same as samples, as we make our own sample lamps, something not always done. With our ELK new lamps and NOVELTY renewed lamps we are in position to supply all classes of trade. Be sure to mail your inquiry to the **NOVELTY INCANDESCENT LAMP COMPANY, Emporium, Pa.,** so that it will reach the proper hands.

ALVIN & JACKSON, WESTERN SALES AGENTS, 502 Monadnock Block, Chicago, Ill.

Cutler-Hammer Motor Control Devices

of so many kinds and types have been described in these pages that, if you were to try, you could not enumerate them from memory.

When you become involved in any problem of electric motor control don't try to remember who makes this kind of a controller and who makes that.

Just remember this:

You can get a Cutler-Hammer Controller for ANY and EVERY SERVICE

We have scores of types of standard apparatus Outside of these we have built thousands of special devices to fit almost every conceivable set of conditions.

GET THE BENEFIT OF OUR EXPERIENCE

Harrison, New Jersey

Sold by electrical supply houses

THE "BABY" TORCH

Burns Without Air Pressure

THE "Baby" Gasoline Torch is the smallest torch made which gives perfect results, and fills the long-felt want for a torch which fits the hand and can be used in contracted places and corners. It can be turned in any position, as it burns equally well in all positions. It is perfectly automatic; has no cocks or valves to get out of order; lights with a match; self-feeding; requires no pumping of air and is always ready for use. It is indispensable to the Telephone and Telegraph linemen and ELECTRICIANS. It burns about two hours from one filling.

ZEIDLER LAMP & BRASS CO., LOMIRA, WISCONSIN

"Active material not in electrical contact with the grid is absolutely inert." In the Gould Plate it is quite impossible for any active material contained in the grooves not to be in good mechanical or electrical contact with the support plate. The Gould Plate, in process of manufacture, is given a closely ribbed surface, and in the grooves the active material is formed electrochemically as shown in the diagram. The structure of these elements is highly porous, though densely packed in spaces so narrow as to render mechanical dislodgment nearly impossible. By the very nature of this construction all active material in grooves is maintained in close electrical contact with the support plate. It will pay you to send for the Gould literature.

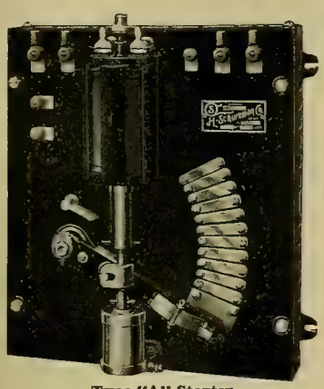
AUTOMATIC PUMP STARTERS



Type "A" Starter

The bottom segment on this starter is made of insulating material. By means of a "lost motion" arrangement in the vacuum dashpot, the contact arm jumps to the first copper segment as soon as the solenoid is energized. As the circuit is thus made and broken positively, no additional solenoid or magnet switch is required. Prices on request.

There's No Friction

with the Fibre-Graphite Commutator Brush. Being 90 per cent. pure graphite, it insures low resistance, no sparking under a varying load, and longer wear. There is no greasing required. The Fibre-Graphite is therefore the most economic brush on the market. Send for price list.

Contractors, Attention

WE DO NOT BUILD SWITCHBOARDS.

We build instruments for you to put on your boards. We do not attempt to sell you instruments and then enter into competition and underbid you on the price of the boards. If we did this, we could possibly get a good many switchboard orders, as we could sell instruments cheaper to ourselves than we could to contractors.

We come to you, asking your support in the instrument line, guaranteeing not to compete with you on your switchboard business, guaranteeing to give you good instruments at a reasonable price.

We solicit your patronage with a full line of switchboard instruments, which we can ship from a large stock.

Our Bulletin No. 67-H will tell you more about this.

General Electric Company

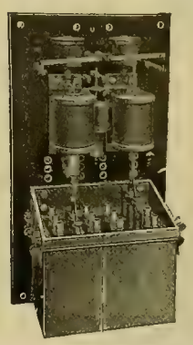
Automatic Starting Compensators

For Three-Phase Induction Motors

Adapted for pumping plants or similar works. Operation is entirely automatic.

Started by a push-button switch or its equivalent. Motor may be controlled by a float switch adjustable to depth of water in reservoir.

Or by a pressure switch using a regular G. E. M. C. governor similar to that employed in air-brake work.



Automatic Starting Compensator

Each consists essentially of a regular subdivided compensator winding with automatic interconnecting switches.

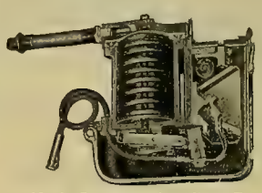
Interconnections between motors and line are made by two oil-immersed switches controlled by solenoid magnets.

One solenoid switch connects motor to compensator; the second throws motor directly across line

All operating circuits are broken when motor is running; no energy wasted in coils, and no disagreeable humming.

Auxiliary Float Switch

Built for potentials up to 550 volts



M. C. Governor-Auxiliary P

Time allowed for bringing motor up to speed between the two operations is provided by an adjustable dashpot auxiliary switch.

For higher voltages a series transformer is used to step down potential for operating solenoids

CHICAGO

In the Design of Northern Power and Lighting Equipments

For industrial and isolated plant work we have ignored conditions of shop convenience. The prime factor is to provide machines convenient to arrange, easily and economically operated and endowed with long, useful life.

Economies of manufacture—which enable us to compete with machinery built for convenience and ease of manufacture—are obtained by our superior shop methods. **See Booklet No. 2538.**

The difference between dry cell batteries and **Edison Primary Batteries** is the difference between chance and certainty. The first thing to know of a battery is what to expect of it. With a dry cell there is no knowing. With the Edison you know exactly. The Edison is not only the most trustworthy of all batteries but delivers the greatest amount of energy for the least cost.

Tell us for what use you wish electrical energy and we will tell you which Edison battery you need, how many and the cost.

A BOOK OF MERIT

MODERN ELECTRIC RAILWAY MOTORS.

BY GEO. T. HANCHETT, M. E.

FIRST PRACTICAL WORK ON RAILWAY MOTORS.

CONTENTS.—Chapter I.—Forms of Field Magnets. II.—Armature Winding Diagrams. III.—Field Coil Construction and Arrangement. IV.—Armature Construction. V.—Commutator and Brush Holder Construction. VI.—Motor Casings. VII.—Motor Suspensions. VIII.—Bearings and Gears. IX.—Lubrication. X.—General Dimensions and Data. XI.—Management and Repair. XII.—Railway Motor Design.

200 Pages. 157 Illustrations and Table. Price $2.00.

THIS is a book unique in its treatment of electric railway equipment. The first ten chapters are devoted to minute description of the details of electric railway motors that are in use to-day. Each organ of an electric railway motor is taken up in turn, described and illustrated by examples of present and past practice, and its operation explained in the light of practical experience. In short, the review of current practice is of such a nature as to bring out the reason why the electric railway motor is built as it is to-day. For example, field magnets of different types of motors are illustrated and compared, and their features of merit and faults pointed out. Armatures, armature windings, brush holders, suspensions and other details are similarly treated, each detail, however minute, being exhaustively considered. The last two chapters are devoted, one to the management and repair of electric railway motors, and the other to railway motor design, a complete design being worked out as an example. A table gives authoritative data of all types of railway motors in common use, both in America and Europe. **Sent postpaid on receipt of price.**

ELECTRICIAN PUBLISHING CO., 507 MARQUETTE BLDG., CHICAGO.

The How and Why of Electricity

By CHARLES TRIPLER CHILD

Second Edition, Revised and Enlarged **Price $1.00, Postage Prepaid**

WHILE the added matter has brought the volume up to date in every phase of this study, the original text, as prepared by its brilliant author, remains to entrance the reader. New illustrations have been made where it was deemed possible to further illuminate the explanatory matter. The book contains no mathematics. The phenomena of electricity are treated in splendidly arranged word pictures, and the engineer, the student and the non-technical reader, alike, may be benefited and entertained by this book.

CONTENTS

CHAPTER	
	Preface
I	The Electric Current
II	The Electric Battery
III	The Effects of Electric Flow in the Circuit—Heat and Chemical Action
IV	The Effects of Electric Flow Outside the Circuit—Magnetism and Induction—The Electrical Units
V	Electromagnets—The Telegraph
VI	Electric Signaling Apparatus
VII	The Relations Between Magnets and Electric Currents
VIII	Induction and Reactive Coils
IX	The Telephone
X	Telephone Accessories
XI	The Mechanical Generation of Electricity
XII	The Dynamo Machine
XIII	Various Types of Dynamo Machines
XIV	Alternators—Polyphase Currents
XV	The Electric Motor
XVI	The Electric Railway
XVII	Polyphase Currents and Motors
XVIII	Electrical Power Transmission
XIX	The Incandescent Light
XX	The Arc Light
XXI	Electrochemistry—Storage Batteries
XXII	Wireless Telegraphy
XXIII	Radiation—X-Rays

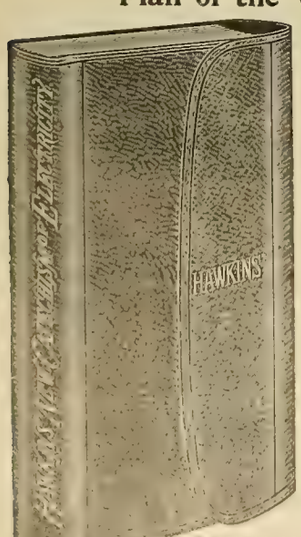
HAWKINS' NEW CATECHISM OF ELECTRICITY.

Plan of the Work, Contents, Etc.



PRICE $2.00.

The New Catechism of Electricity will be found to be surprisingly plain, and free from useless and ambiguous terms. The plan upon which it is arranged is unique.

The book is, first of all, intended to be plain and instructive; some 300 illustrations have been introduced, so that the mere pictures will afford almost a knowledge of the subjects.

It is a school book from the manner in which it proceeds from the simple facts to the abstract principles which the facts indicate; it is also a book of reference through the index of seventeen double columns of fine type pages; by means of this index a thousand items of practical importance are at once available.

It is an up-to date work, which has cost a large outlay of capital and time, and, in short, it is doubtful if any more attractive book has ever been issued—or one more useful.

The subjects treated upon are as follows: Dedication to Thomas A. Edison, with engraving of Mr. Edison; Preface and Introduction; Nature and Source of Electricity and Magnetism.

The Dynamo; Conductors and Non-Conductors; Symbols, abbreviations and definitions relating to electricity; Parts of the Dynamo; The Motor; The Care and Management of the Dynamo and Motor.

Electric Lighting; Wiring; The rules and requirements of the National Board of Underwriters in full; Electrical Measurements.

The Electric Railway; Line Work; Instruction and Cautions for Linemen and the Dynamo Room; Storage Batteries; Care and Management of the Street Car Motor; Electro Plating.

The Telephone and Telegraph; The Electric Elevator; Accidents and Emergencies, etc., etc.

The full one-third part of the whole work has been devoted to the explanation and illustrations of the dynamo, and particular directions relating to its care and management;—all the directions are given in the simplest and most kindly way to assist rather than confuse the learner. The names of the various parts of the machine are also given with pictorial illustrations of the same.

In the Catechism no less than 25 full page illustrations have been given of the various dynamo machines made in all parts of the country, and an equal number of part page illustrations.

II. **Telephone Apparatus**
III. **Systems of Communication**
IV. **Construction and Equipment**

IN 32 CHAPTERS, 450 PAGES, 375 ILLUSTRATIONS. **PRICE $2.00 POSTPAID**

Send All Orders to Electrician Publishing Co., 507 Marquette Building, Chicago

YOU WOULDN'T START A HORSE CAR LINE

in this age of electric cars? Not if you wanted to make money out of the business of transportation.

Then why should you start a manual telephone exchange in this age of automatics, if you want to make money out of the telephone business?

The automatic system of telephony bears the same relation to the manual system that the electric car does to the horse car. It is the apotheosis of telephone development, as the electric car is of transportation development.

The automatic telephone system produces the best service more economically than indifferent service can be produced with manual equipment.

There is no more question as to the relative popularity of the automatic and manual telephone service where the two kinds are in competition than there is as to the relative popularity of the trolley car and the horse car.

And, as for the securities—the same comparison may be applied with the same results.

Our automatic system has been adopted in the following cities:

Aberdeen, S. D.
Akron, Ohio.

WRITE TO-DAY

Simplex Electric Heating Co., Cambridge, Mass.

When a man's electrical ideas flow freely; when he discusses electrical subjects intelligently and glibly, you will be pretty safe in assuming that he keeps in touch with electrical progress by perusing the Western Electrician 52 times a year.

Westinghouse

Portable Lamp Testing Volt-Wattmeter

Every Central Station Should Have One

Can be used without change of calibration on either alternating or direct-current circuits. Reverse readings not necessary on direct currents. A socket is provided for the lamps to be tested.

There are two concentric scales, one indicating watts, the other volts. The wattage of the lamp or the voltage of the current can be read by using the switch to cut the series windings in or out.

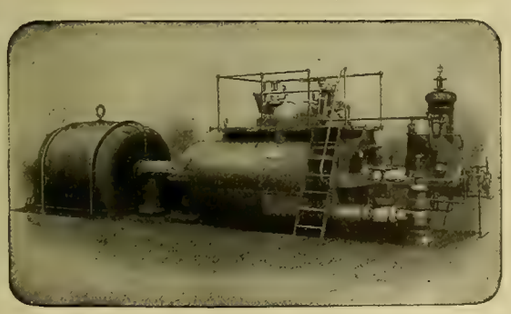
Steam Turbines

First Demonstrated in America



The many superior economical advantages of the turbine as a prime mover for heavy power purposes. A natural result of their unqualified success was the placing of other types on the market. There is, however, but one "Westinghouse."

The knowledge and experience gained during eleven years in the field are embodied in the present Westinghouse Turbine.
